Information and Communication Technology (ICT) is becoming indispensable in the spheres of business, government, education and entertainment. It makes Internet marketing, e-government, e-learning and online chat services possible. And its commercial aspect, e-commerce, is part of this trend. Today, no business training is complete without the inclusion of at least the basics of e-commerce. But although e-commerce has opened up new opportunities, it also presents threats and risks. The success of e-commerce hinges on security and trust. Every business manager should therefore have a fundamental awareness of the meaning of e-commerce and ICT security and risk management. This second edition provides guidelines for overcoming these challenges by exploring the ways in which entrepreneurs and managers should cooperate with IT experts to exploit opportunities and combat the threats imposed by new technologies.

The regulation on defects of consent loses its usefulness and should be replaced by special regulations, more suited to the requirements of

consumer e-commerce. The study's main objective is to verify whether, due to the evolution of the concept of the declaration of intent, the emergence of non-individual consumer protection instruments, and technological developments the code regulation of defects in the declaration of will remains useful in the case of contracts concluded by consumers on the Internet. The impact of the development of the Internet environment on the applicability and effectiveness of this traditional private institution is analyzed. Mechanisms that, in practice, displace the regulation of vice of consent are indicated.
