The Modern Automotive Technology Workbook is two products in one: a text study guide and a shop activity guide. It is designed to help you learn the essential aspects of automotive technology. It does this by highlighting the most important content in the textbook and supplementing this information with in-shop activities (jobs). The first portion of the workbook serves as a study guide for the textbook chapters. The exercises in this section reinforce the material in the textbook, ensuring that you understand both the written and illustrated aspects of automotive technology. Illustrations are

used heavily in the workbook. After answering written questions on a subject or assembly, you will often be asked to identify related parts on a simplified illustration. This will help you more fully grasp the written material. The jobs in the second part of the workbook are supplemental hands-on tasks. They provide detailed instructions for a variety of shop activities, such as servicing cylinder heads and brake assemblies. Other jobs cover shop safety, checking vehicle fluids, using service manuals, and servicing ignition systems. All jobs will help you develop the practical skills needed to work in an automotive repair facility.
