Few enthusiasts will refute the majestic appeal of BMW's E46 M3 S54 powerplant. It featured individual throttle bodies, variable valve timing, 333 horsepower, and an 8,000 rpm redline. But like most race bread engines designed for street use, they had their own problems...especially as the mileage accrued.

Hello everyone, I have a S54 engine that I brought to rebuild for a turbo build but plans changed and I'm going a different route. I disassembled the engine and have it in separate pieces ready for the machine shop. Engine came out of a 2005 or 2006 e46 m3, can't remember the year, only had 90,xxx miles on it upon removal from the previous owner.

The BMW M54 is a naturally aspirated straight-6 petrol engine produced from 2000 to 2006. It was released in the E53 X5 and is the replacement for the M52 engine. The S54 is the equivalent high performance engine, used in the E46 M3, the Z3 M Coupé/Roadster and the E85 Z4 M. The BMW M56 SULEV engine is based on the M54. The M54 was phased out following the introduction of the BMW N52 engine in 2004. From 2001 to 2003, the M54 was included on the Ward's 10 Best Engines list.

BMW's S54 engine debuted in the 2000 E46 M3 and remained in production through 2008, powering only the E85 Z4 M Roadster in the later years. The stout inline-6 S54 managed an impressive 102.5hp per liter in the 333hp US models. Notably, it is the last naturally aspirated inline-6 M3 engine.
