Sentiment analysis and opinion mining is the field of study that analyzes people's opinions, sentiments, evaluations, attitudes, and emotions from written language. It is one of the most active research areas in natural language processing and is also widely studied in data mining, Web mining, and text mining. In fact, this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole. The growing importance of sentiment analysis coincides with the growth of social media such as reviews, forum discussions, blogs, micro-blogs, Twitter, and social networks. For the first time in human history, we now have a huge volume of opinionated data recorded in digital form for analysis. Sentiment analysis systems are being applied in almost every business and social domain

because opinions are central to almost all human activities and are key influencers of our behaviors. Our beliefs and perceptions of reality, and the choices we make, are largely conditioned on how others see and evaluate the world. For this reason, when we need to make a decision we often seek out the opinions of others. This is true not only for individuals but also for organizations. This book is a comprehensive introductory and survey text. It covers all important topics and the latest developments in the field with over 400 references. It is suitable for students, researchers and practitioners who are interested in social media analysis in general and sentiment analysis in particular. Lecturers can readily use it in class for courses on natural language processing, social media analysis, text mining, and data mining. Lecture slides are also available online. Bestselling author Gill Paul returns with a brilliant novel about Lady Evelyn Herbert, the woman who took the very first step into the tomb of Pharaoh Tutankhamun, and who lived in the real Downton Abbey, Highclere Castle, and the long after-effects of the Curse of Pharaohs. Lady Evelyn Herbert was the daughter of the Earl of Carnarvon, brought up in

stunning Highclere Castle. Popular and pretty, she seemed destined for a prestigious marriage, but she had other ideas. Instead, she left behind the world of society balls and chaperones to travel to the Egyptian desert, where she hoped to become a lady archaeologist, working alongside her father and Howard Carter in the hunt for an undisturbed tomb. In November 1922, their dreams came true when they discovered the burial place of Tutankhamun, packed full of gold and unimaginable riches, and she was the first person to crawl inside for three thousand years. She called it the "greatest moment" of her life—but soon afterwards everything changed, with a string of tragedies that left her world a darker, sadder place. Newspapers claimed it was "the curse of Tutankhamun," but Howard Carter said no rational person would entertain such nonsense. Yet fifty years later, when an Egyptian academic came asking questions about what really happened in the tomb, it unleashed a new chain of events that seemed to threaten the happiness Eve had finally found.
