Macmillan/McGraw-Hill Science: Earth science teacher's ed Prentice Hall

Excerpt from Earth Science: A Physiography The introductory chapter gives a general idea of what has happened on the earth and what is going on now, so that the pupil is made aware of the aim of the entire subject. This is followed by a study of the materials of which the earth is made, rocks, and of the forces acting upon those materials. Having learned that much, the pupil is in a position to understand how these forces have modified the earth's surface and made it what it is today. The land is studied first, because pupils are more likely to know something about land, to begin

with. It is for that reason they find land studies easier than the rest of the subject. This is followed by a short history of the earth, designed to teach the student how the earth came to its present condition. The chapter is optional, but the author feels that many of the better students will be eager to read it. The study of the land will probably occupy the first half of a year. The pupils who have successfully completed the first half will then study the earth's relations in space, seasons, latitude, longitude, time, the atmosphere and associated phenomena like weather and climate. And the year's work is brought to an end by the study of the sea with special emphasis on harbors. The text is printed in type of two sizes: larger type for the essential material and smaller for the Optional. Each chapter has a completion summary which the pupil is required to Copy and complete. This avoids the objection that many teachers have to the ordinary summary: that some pupils read only the summary. The completion summary acts

as a self-test, for if the pupil is able to fill in the blanks, he knows that he has learned his lesson and this knowledge carries with it a sense of mastery and hence a feeling of satisfaction. At the end of each chapter are questions on every important point in the text and the teacher may well use these questions as a chief part of his assignment. There is also a set of optional questions which will challenge the best students to extend themselves. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Studyguide for Earth Science by Edward J Tarbuck, Isbn 9780321688507

This Concepts of Earth and Chemistry contains materials for use with Exploring Planet Earth and Exploring the World of Chemistry in the Exploring series. Features: Each suggested weekly schedule has three easy-to-manage lessons which combine reading, worksheets, and vocabulary-building. Designed to allow your student to be independent, materials in this resource are divided by section so you can remove quizzes, tests, and answer keys before beginning the coursework. As always, you are encouraged to adjust the schedule

and materials as you need to in order to best work within your educational program. Workflow: Students will read the pages in their book and then answer the questions at the end of each chapter. Tests are given at regular intervals.

Earth Science Simplified, The perfect earth science review book is a book that helps students as they study for the Earth Science Regents exam or other standardized Earth Science examinations. This review book is unique in two ways: It's written in point-by-point format so that there is no need to read through lengthy paragraphs to find the necessary information. Concept charts placed after each chapter clarify and organize the material. In addition: This book contains snapshots of reference table charts throughout the chapters, with explanations on how to use the charts. The entire Earth Science Reference Tables can

be found at the back of the book. A number of practice Regents questions follow every chapter. Answers to these questions are located in the back of the book. Procedures for labs included in the performance test are explained.
