Earth Science Barron's Educational Series Learning at home is now the new normal. Need a quick and painless refresher? Barron's Painless books make learning easier while you balance home and school. Titles in Barron's extensive Painless Series cover a wide range of

subjects as they are taught on middle school and high school levels. Perfect for supporting state standards, these books are written for students who find the subjects unusually difficult and confusing--or in many cases, just plain boring, and may need a little extra help. Barron's Painless Series authors' main goal is to clear up students' confusion and perk up their interest by emphasizing the intriguing plates, earthquakes, and often exciting ways in which they can put each

subject to practical use. Most of these books take a light-hearted approach to their subjects, often employing humor, and always presenting fun-learning exercises that include puzzles, games, and challenging "Brain Ticker" problems to solve. This title describes the exciting revolution in our understanding of Earth's processes and changes, focusing on movement of tectonic plates, earthquakes, volcanoes, and much more.

National Academies Press  
Earth science, which in this context does not include oceanic, atmospheric, and space sciences, is vital to the wellbeing of the United States and many of its issues, such as water resources, are expected to grow in importance. An earth science workforce will be needed to deal with this issues and it's important that this workforce draw on the talents of all citizens. Thus, federal education programs can be implemented to help attract and retain students on an earth science

pathway; however, tight funding means agencies need to invest in programs that actually work. As a result, the U.S. Geological Survey (USGS) Office of Science Quality and Integrity asked the National Research Council (NRC) to establish a committee to carry out a study, organized around a workshop, to address several tasks including: examining recent earth science education programs with a research or training component, both formal and informal, in these federal agencies; indentifying criteria and the results of previous federal

program evaluations, and summarizing the knowledge and skills identified in recent NRC workforce reports that are needed by earth scientists in their careers. Preparing the Next Generation of Earth Scientists: An Examination of Federal Education and Training Programs presents the committee's finding. The investigation was completed through information provided by federal agency managers and published articles and reports. A 2-day workshop was also held to examine federal earth science education programs and

efforts to leverage resources. The report includes the workshop agenda, a glossary of abbreviated terms, and more.
