The popular Left Behind series by Tim LaHaye and Jerry Jenkins has sold more than 62 million copies since the first volume appeared in 1995. Jerry Falwell pronounced it the most important series of books in the history of modern Christianity. Many readers have assumed it gives the true facts about the way the world will end and what will happen to all the people in it. But according to real biblical scholarship, this series is seriously flawed. Based on a misreading of many scriptures, including Daniel and the Book of Revelation, it has fed a kind of hysteria in the Christian populace that has led many people to reorder their existence in expectation of an impending doom and the sudden, unexpected return of Jesus. In this book, William Powell Tuck carefully and authoritatively refutes the premises and faulty theology of the Left Behind books, critiquing them in the light of genuine biblical scholarship and common sense.

There's never been a better time to "be prepared." Matthew Stein's comprehensive primer on sustainable living skills—from food and water to shelter and energy to first-aid and crisis-management skills—prepares you to embark on the path toward sustainability. But unlike any other book, Stein not only shows you how to live "green" in seemingly stable times, but to live in the face of potential disasters, lasting days or years, coming in the form of social upheaval, economic meltdown, or environmental catastrophe. When Technology Fails covers the gamut. You'll learn how to start a fire and keep warm if you've been left temporarily homeless, as well as the basics of installing a renewable energy system for your home or business. You'll learn how to find and sterilize water in the face of utility failure, as well as practical information for dealing with water-quality issues even when the public tap water is still flowing. You'll learn alternative techniques for healing equally suited to an era of profit-driven malpractice as to situations of social calamity. Each chapter (a survey of the risks to the status quo; supplies and preparation for short- and long-term emergencies; emergency measures for survival; water; food; shelter; clothing; first aid, low-tech medicine, and healing; energy, heat, and power; metalworking; utensils and storage; low-tech chemistry; and engineering, machines, and materials) offers the same approach, describing skills for self-reliance in good times and bad. Fully revised and expanded—the first edition was written pre-9/11 and pre-Katrina, when few Americans took the risk of social disruption seriously—When Technology Fails ends on a positive, proactive note with a new chapter on "Making the Shift to Sustainability," which offers practical suggestions for changing our world on personal, community and global levels.

From the bestselling author of The Submission: A young Afghan-American woman is trapped between her ideals and the complicated truth in this "penetrating" (O, Oprah Magazine), "stealthily suspenseful," (Booklist, starred review), "breathtaking and achingly nuanced" (Kirkus, starred review) novel. Parveen Shams, a college senior in search of a calling, feels pulled between her charismatic and mercurial anthropology professor and the comfortable but predictable Afghan-American community in her Northern California hometown. When she discovers a bestselling book called Mother Afghanistan, a memoir by humanitarian Gideon Crane that has become a bible for American engagement in the country, she is inspired. Galvanized by Crane's experience, Parveen travels to a remote village in the land of her birth to join the work of his charitable foundation. When she arrives, however, Crane's maternity clinic, while grandly equipped, is mostly unstaffed. The villagers do not exhibit the gratitude she expected to receive. And Crane's memoir appears to be littered with mistakes, or outright fabrications. As the reasons for Parveen's pilgrimage crumble beneath her, the U.S. military, also drawn by Crane's book, turns up to pave the solde road to the village, bringing the war in their wake. When a fatal ambush occurs, Parveen must decide whether her loyalties lie with the villagers or the soldiers -- and she must determine her own relationship to the truth. Amy Waldman, who reported from Afghanistan for the New York Times after 9/11, has created a taut, propulsive novel about power, perspective, and idealism, brushing aside the dust of America's longest-standing war to reveal the complicated truths beneath. A Door in the Earth is the rarest of books, one that helps us understand living history through poignant characters and unforgettable storytelling.

Anxious to avoid a war that would destroy the entire planet, the major powers of Earth have come to an ingenious compromise. Each country sends a force of adaptable, self-programming robots to the surface of the moon to play out the conflict there and, hopefully, reach a mutually agreeable stalemate. But when the robots stop responding, it is up to Ijon Tichy to travel to the lunar war zone and discover what went wrong. Tichy finds what he needs to know, but falls victim to an attack that severs the left and right sides of his brain: one of which knows nothing about the status of the moon, the other of which isn ' t telling. Now Tichy finds himself at the center of a new sort of war of attrition, with each world power clamoring for his knowledge and each half of his stubborn brain clamoring for control. Wry and action-packed in equal measure, Stanislaw Lem ' s absurd, insightful sendup of the Cold War is required reading for any fan of science fiction. Here, “ humor and a breathless pace create a delightful and thought-provoking read ” (Publishers Weekly).
