Easy-to-make Spaceships that Really Fly Workman Publishing
This book is as a detailed, but highly readable and balanced account of the history of animal space flights carried out by all nations, but principally the United States and the Soviet Union. It explores the ways in which animal high-altitude and space flight research impacted on space flight biomedicine and technology, and how the results - both successful and disappointing - allowed human beings to then undertake that same hazardous journey with far greater understanding and confidence. This complete and authoritative book will undoubtedly become the ultimate authority on animal space flights.

A New York Times bestseller! The historic race that reawakened the promise of manned spaceflight A Finalist for the PEN/E. O. Wilson Literary Science Writing Award Alone in a Spartan black cockpit, test pilot Mike Melvill rocketed toward space. He had eighty seconds to exceed the speed of sound and begin the climb to a target no civilian pilot had ever reached. He might not make it back alive. If he did, he would make history as the world's first commercial astronaut. The spectacle defied reason, the result of a competition dreamed up by entrepreneur Peter Diamandis, whose vision for a new race to space required small teams to do what only the world's largest governments had done before. Peter Diamandis was the son of hardworking immigrants who wanted their science prodigy to make the family proud and become a doctor. But from the age of eight, when he watched Apollo 11 land on the Moon, his singular goal was to get to space. When he realized NASA was winding down manned space flight, Diamandis set out on one of the great entrepreneurial adventure stories of our time. If the government wouldn't send him to space, he would create a private space flight industry himself. In the 1990s, this idea was the stuff of science fiction. Undaunted, Diamandis found inspiration in an unlikely place: the golden age of aviation. He discovered that Charles Lindbergh made his transatlantic flight to win a \$25,000 prize. The flight made Lindbergh the most famous man on earth and galvanized the airline industry. Why, Diamandis thought, couldn't the same be done for space flight? The story of the bullet-shaped SpaceShipOne, and the other teams in the hunt, is an extraordinary tale of making the impossible possible. It is driven by outsized characters—Burt Rutan, Richard Branson, John Carmack, Paul Allen—and obsessive pursuits. In the end, as Diamandis dreamed, the result wasn't just a victory for one team; it was the foundation for a new industry and a new age.

Pure origami is an ancient and elegant art, whereas making paper airplanes is often considered a relatively modern recreation. Origami focuses on beauty, while the performance of a paper airplane is usually its most important attribute. This clearly written, carefully illustrated how-to book combines the two activities to produce an up-to-date innovation: artfully constructed origami airplanes that actually fly. The author first shows you how to construct the Jet Tail, an important basic feature that is needed for many of the more difficult models diagrammed later. This is followed by detailed, step-by-step directions and diagrams for creating each of 12 different models: space shuttle, futuristic shuttle, flying wing, delta wing-jet, fighter plane, interceptor, double tail fighter, dart plane, fighter plane with engines, futuristic fighter, and two different jets. The projects progress in level of difficulty; as you master the simpler models you will be developing the skills you need to assemble the more complicated craft. The book also includes valuable suggestions about types of paper to use, useful hints that help ensure success, and solutions to common problems paperfolders may encounter.
