Revisiting India's Partition: New Essays on Memory, Culture, and Politics brings together scholars from across the globe to provide diverse perspectives on the continuing impact of the 1947 division of India on the eve of independence from the British Empire. The Partition caused a million deaths and displaced well over 10 million people. The trauma of brutal violence and displacement still haunts the survivors as well as their children and grandchildren. Nearly 70 years after this cataclysmic event, Revisiting India's Partition explores the impact of the "Long Partition," a concept developed by Vazira Zamindar to underscore the ongoing effects of the 1947 Partition upon all South Asian nations. In our collection, we extend and expand Zamindar's notion of the Long Partition to examine the cultural, political, economic, and psychological impact the Partition continues to have on communities throughout the South Asian diaspora. The nineteen interdisciplinary essays in this book provide a multi-vocal, multi-focal, transnational commentary on the Partition in relation to motifs, communities, and regions in South Asia that have received scant attention in previous scholarship. In their individual essays, contributors offer new engagements on South Asia in relation to several topics, including decolonization and post-colony, economic development and nation-

building, cross-border skirmishes and terrorism, and nationalism. This book is dedicated to covering areas beyond Punjab and Bengal and includes analyses of how Sindh and Kashmir, Hyderabad, and more broadly South India, the Northeast, and Burma call for special attention in coming to terms with memory, culture and politics surrounding the Partition.

This handbook provides an exhaustive description of polyethylene. The 50+ chapters are written by some of the most experienced and prominent authors in the field, providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene, copolymers, and polyethylene produced from metallocene catalysts. With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing, fillers, processing aids, anti-fogging agents, pigments, and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding, and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable, and foaming processes. The business of polyethylene including markets, world capacity, and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.

The British Red Cross (BRC) has played a pivotal role in the history of war, international relations, humanitarianism and health in modern Britain, and interest in the charity has been piqued by the centenary of the First World War. Exhibitions, television series and the film Testament of Youth (2014) have highlighted the work of Red Cross volunteers. The History of the British Red Cross, 1870-2020 tells the broader story of the BRC within politics and society. Major episodes in modern British political and military history are integral to the story of the BRC, from the second wave of European colonialism and the South African War, to the two World Wars. Following the Second World War, the BRC provided vital support for the new National Health Service, organised civil defence activities during the Cold War, and responded to the suffering resulting from the actions of terrorists from the IRA to Al-Qaida. As Britain's representative to the International Committee of the Red Cross (ICRC), and the International Federation of Red Cross and Red Crescent Societies, the charity plays a key role in international relations and disaster relief. The 150th anniversary of the establishment of the National Society for Aid to the Sick and Wounded in War, founded in 1870 as the United Kingdom's member of the ICRC, provides a ripe opportunity for the publication of the first fully-contextualised account of the history of the BRC.

This book is a comprehensive guide to contrast-enhanced mammography (CEM), a novel advanced mammography technique using dual-energy mammography in combination with intravenous contrast administration in order to increase the diagnostic performance of digital mammography. Readers will find helpful information on the principles of CEM and indications for the technique. Detailed attention is devoted to image interpretation, with presentation of case examples and highlighting of pitfalls and artifacts. Other topics to be addressed include the establishment of a CEM program, the comparative merits of CEM and MRI, and the roles of CEM in screening populations and

monitoring of response to neoadjuvant chemotherapy. CEM became commercially available in 2011 and is increasingly being used in clinical practice owing to its superiority over full-field digital mammography. This book will be an ideal source of knowledge and guidance for all who wish to start using the technique or to learn more about it.

Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

This third edition has been written to thoroughly update the coverage of injection molding in the World of Plastics. There have been changes, including extensive additions, to over 50% of the content of the second edition. Many examples are provided of processing different plastics and relating the results to critical factors, which range from product design to meeting performance requirements to reducing costs to zero-defect targets. Changes have not been made that concern what is basic to injection molding. However, more basic information has been added concerning present and future developments, resulting in the book being more useful for a long time to come. Detailed explanations and interpretation of individual subjects (more than 1500) are provided, using a total of 914 figures and 209 tables. Throughout the book there is extensive information on problems and solutions as well as extensive cross referencing on its many different subjects. This book represents the ENCYCLOPEDIA on IM, as is evident from its extensive and detailed text that follows from its lengthy Table of CONTENTS and INDEX with over 5200 entries. The worldwide industry encompasses many hundreds of useful plastic-related computer programs. This book lists these programs (ranging from operational training to product design to molding to marketing) and explains them briefly, but no program or series of programs can provide the details obtained and the extent of information contained in this single sourcebook.
