One is the beloved author of *The Name of the Rose*, a celebrated scholar, philosopher, and self-declared secularist; the other is a preeminent clergyman and a respected expert on the New Testament. In this intellectually stimulating dialogue, often adversarial but always amicable, these two great men, who stand on opposite sides of the church door, discuss some of the most controversial issues of our day, including the apocalypse, abortion, women in the clergy, and ethics. As we voyage onward into the new millennium, they frame a debate about matters that have already begun to rage, always aware of the gulf between belief and nonbelief that separates them, constantly probing and challenging, but also respectful of the other's viewpoint. For believers and nonbelievers alike, the result is both edifying and illuminating. "Their correspondence," writes Professor Harvey

Cox in his introduction, "lifts the possibility of intelligent conversation on religion to a new level."

With more than 1,000 listings of green retailers, service providers, and organizations throughout the five boroughs of New York City, this guide is an indispensable reference for eco-friendly shopping. It also offers practical advice and environmental tips that can be easily used at home. Listings range from organic restaurants and grocery stores to dry cleaners, organic pest-control services, and sustainable building suppliers, such as landscapers and interior designers. All listings are vetted by a research team and then rescreened by local expert advisers, providing shoppers with confident, reliable choices.

Some listings are further recognized with a "green leaf" award, which gauges green businesses on a scale of one to four leaves, four being the greenest. This guide is a truly complete resource for green living.

The sustainable use of natural resources is an important global challenge, and improved metal sustainability is a crucial goal for the 21st century in order to conserve the supply of critical metals and mitigate the environmental and health issues resulting from unrecovered metals.

Metal Sustainability: Global Challenges, Consequences and Prospects discusses important topics and challenges associated with sustainability in metal life cycles, from mining ore to beneficiation processes, to product manufacture, to recovery from end-of-life materials, to environmental and health concerns resulting from generated waste. The broad perspective presented highlights the global interdependence of the many stages of metal life cycles. Economic issues are emphasized

and relevant environmental, health, political, industrial and societal issues are discussed. The importance of applying green chemistry principles to metal sustainability is emphasized. Topics covered include:

- Recycling and sustainable utilization of precious and specialty metals
- Formal and informal recycling from electronic and other high-tech wastes
- Global management of electronic wastes
- Metal reuse and recycling in developing countries
- Effects of toxic and other metal releases on the environment and human health
- Effect on bacteria of toxic metal release
- Selective recovery of platinum group metals and rare earth metals
- Metal sustainability from a manufacturing perspective
- Economic perspectives on sustainability, mineral development, and metal life cycles
- Closing the Loop - Minerals Industry Issues

The aim of this book is to improve awareness of the increasingly important role metals play in our high-tech society, the need to conserve our metal

supply throughout the metal life cycle, the importance of improved metal recycling, and the effects that unhindered metal loss can have on the environment and on human health.

Have you ever wondered how we ended up in the present state of slowed economic progress and recession riddled societies? To make things even worse, we are starting to suffer severe environmental consequences - with pollution and overall ecological breakdown. While awareness of movements like "Fridays for Future" has brought environmental problems to the forefront, practical solutions to these problems will only be achieved with economics, though that power is currently in the hands of unelected people, people that do not have our best interest in mind. In this book, the author will demonstrate that knowledge of economics is for everyone, not just for a selected few. This knowledge will give us a better understanding of where we are failing our society, our planet, and each other as people. It will expose

the shocking revelation that a rich ecology and economy are not mutually exclusive but go hand in hand. In no uncertain terms, "eco-nomics" will be the next revolution.

The alarming level of greenhouse gases in the environment, fast depleting natural resources and the increasing level of industrial effluents, have made every single manufacturing activity come under the

scrutiny of sustainability. When all kinds of waste such as clothes, furniture, carpets, televisions, shoes, paper, food wastes etc. end up in the landfill, only a few of them are naturally decomposed and thus a large majority remains as non-biodegradable. It is for this reason, efforts are concentrated to reduce the burden on earth by this waste, and as far as used textile products are concerned, there are now attempts to recycle or up-cycle. This book addresses the role of sustainability by using textile waste in fashion and textiles with respect to manufacturing, materials, as well as the economic and business challenges and opportunities it poses. This wide-ranging book comprises 19 chapters on the various topics including: - Solutions for sustainable

fashion and textile industry · Agro and bio waste in the fashion industry · Innovating fashion brands by using textile waste · Waste in handloom textiles · Business paradigm shifting: 21st century fashion from recycling and upcycling · Utilization of natural waste for sustainable textile coloration · Circular economy in fashion and textile from waste · Future pathways of waste utilization for fashion · Sustainable encapsulation of natural dyes from Plant waste for textiles · Agro-waste applications for bio-remediation of textile effluent

From green frogs and blue angels to white bunnies, modern consumers are confronted by a growing array of colorful eco-labels on everything from coffee to computers. When eco-labels are credible,

they can lead to dramatic change in environmental practices broadly and quickly by leveraging the purchasing power of corporate clients (e.g., Walmart and McDonalds) to influence global supply chains. But the credibility of such labels is highly variable; and despite the existence of established practices for eco-labeling, many labels remain little more than superficial exercises in "greenwash." How can consumers separate greenwash from genuine attempts to address environmental challenges? Beyond Greenwash addresses this question by systematically investigating the credibility of transnational eco-labeling organizations across countries and commercial sectors. Using an innovative proxy measure for credibility that examines adherence to established best practices, Hamish van der Ven proposes a novel theory of rigor and credibility in transnational eco-labeling that upends conventional wisdom. He argues that the credibility of an eco-label does not depend on who creates or manages it-

whether a government, industry association, professional standard setter, or environmental NGO. Rather, it depends on which types of businesses use the label. More specifically, eco-labeling organizations that target bigger, consumer-facing retailers tend to create credible eco-labels out of a desire to insulate their clients from critical scrutiny and gain acceptance in new markets. This theory challenges the conventional wisdom that only governments or environmental NGOs can create meaningful environmental governance and suggests that who is being governed matters as much, if not more, than who is doing the governing.

- The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world

“ At this point in time, the Drawdown book is exactly what is needed; a

credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis.

Reported by-effects include increased determination and a sense of grounded hope. ” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming*

“ There ’ s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom. ” —David Roberts, Vox “ This is

the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook. ” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting

them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth ’ s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

"All You Need is Less is about realistically adopting an eco-friendly lifestyle without either losing your mind from the soul-destroying guilt of using a plastic bag because you forgot your reusable ones in the trunk of your car (again), or becoming a preachy know-it-all whom everyone loathes from the tips of her organically-shampooed hair to the toes of her naturally sourced recycled sandals. It's all gotten kind of complicated, hasn't it? These days you're not 'green' enough unless you quit your day job and devote your entire life to attaining an entirely carbon neutral lifestyle or

throw out all of your possessions and replace them with their new 'green' alternatives. This whole eco-friendly thing seems to have devolved into a horrific cycle of guilt,shaming and one-upping, and as a result people are becoming exhausted and getting annoyed and, oh my god, we are living in a world where one of my grocery bags says 'This reusable bag makes me better than you.' It doesn't have to be this way. It is possible to take easy baby-steps towards a more earth-friendly lifestyle without stress, guilt, or judgy eco-shaming. Top eco blogger Madeleine Somerville is here with really original ideas on how to save money and the planet. Her ideas are even fun!
