Anita Lahey's second collection, *Spinning Side Kick*, is a hard-knuckled look at the other half. These lively poems mix a girl-about-town cockiness with an all-too-rare emotional honesty about men, love, and relationships. Whether the subject is a one-man chimney demolition, the lifelong fidelity of seahorses, a lover at war in Afghanistan or a kickboxing match, Lahey confronts the enduring disconnect between the sexes in a language that is slangy and quick, punctuated with jabs. She eyes those moments—in a day, in a life—when the normal clues we rely on disappear, shifting the line between domesticity and danger. In *Spinning Side Kick*, a talented poet returns with sharper aim.

Through Interactive Brokers, software developers can write applications that read financial data, scan for contracts, and submit orders automatically. Individuals can now take advantage of the same high-speed decision making and order placement that professional trading firms use. This book walks through the process of developing applications based on IB's Trader Workstation (TWS) programming interface. Beginning chapters introduce the fundamental classes and functions, while later chapters show how they can be used to implement full-scale trading systems. With an algorithmic system in place, traders don't have to stare at charts for hours on end. Just launch the trading application and let the TWS API do its work. The material in this book focuses on Python and C++ coding, so readers are presumed to have a basic familiarity with one of these languages. However, no experience in financial trading is assumed. If you're new to the world of stocks, bonds, options, and futures, this book explains what these financial instruments are and how to write applications capable of trading them.

Maps are changing. They have become important and fashionable once more. Rethinking Maps brings together leading researchers to explore how maps are being rethought, made and used, and what these changes mean for working cartographers, applied mapping research, and cartographic scholarship. It offers a contemporary assessment of the diverse forms that mapping now takes and, drawing upon a number of theoretic perspectives and disciplines, provides an insightful commentary on new ontological and epistemological thinking with respect to cartography. This book presents a diverse set of approaches to a wide range of map forms and activities in what is presently a rapidly changing field. It employs a multi-disciplinary approach to important contemporary mapping practices, with chapters written by leading theorists who have an international reputation for innovative thinking. Much of the new research around mapping is emerging as critical dialogue between practice and theory and this book has chapters focused on intersections with play, race and cinema. Other chapters discuss cartographic representation, sustainable mapping and visual geographies. It also considers how alternative models of map creation and use such as open-source mappings and map mash-up are being creatively explored by programmers, artists and activists. There is also an examination of the work of various 'everyday mappers' in diverse social and cultural contexts. This blend of conceptual chapters and theoretically directed case studies provides an excellent resource suited to a broad spectrum of researchers, advanced undergraduate and postgraduate students in human geography, GIScience and cartography, visual anthropology, media studies, graphic design and computer graphics. Rethinking Maps is a necessary and significant text for all those studying or having an interest in cartography.

Messages of ascension, love, contact and more in the words of our star brothers and sisters. We are moving through a time of massive change, unprecedented in recorded memory, a time in which life as we know it is being turned upside down. But we do not have to travel through this often confusing and disorientating process alone, for from across the galaxies our star brothers and sisters have gathered to help us through this transformation. Many people on Earth are now being contacted by these loving beings, receiving their words of guidance, encouragement and reassurance to share with those who as yet do not hear them. This book contains some of these messages, received by the author from the star beings of light, messages that are filled with the love and wisdom of the universe.
