Industrial Policy, and  
Economic Development  
Financial  
Times/Prentice Hall**

---

Monograph on the relationship between overurbanization and rural area poverty in developing countries - examines the impact of rapid industrialization on urban development, rural migration and unemployment, etc., and discusses short term and long term rural development policies as well as obstacles to their implementation. Graphs.

Structural change, fundamentals, and growth : a framework and case studies MIT Press

The winners of the Nobel Prize in Economics upend the most

common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily

decisions facing the poor.

## **Reflections on Economic Development Springer**

"This best-selling text offers a unique policy-oriented approach that uses models and concepts to illustrate real-world development problems. Retaining its hallmark accessibility throughout, the Eighth Edition uses the most current data, offering full coverage of recent advances in the field, and featuring a balanced presentation of opposing viewpoints on today's major policy debates. Economic

---

Development includes extensive country-specific examples, with particular attention given to economic dislocations throughout Asia, Russia, and Brazil. Updated Country Case Studies and Comparative Case Studies allow students to apply concepts to specific developing nations."

Economics World Bank  
Publications

This book examines the role of agriculture in the economic transformation of developing low- and

middle-income countries emphasizing the central role of government in accelerating agricultural growth and poverty reduction. In this volume, Mellor measures by household class the employment impact of alternative agricultural growth rates and land tenure systems, and impact on cereal consumption and food security. The book provides detailed analysis of each element of agricultural modernization, accelerated growth in private sector dominated agriculture. The book differs from the bulk of current conventional wisdom in its placement of the non-poor small commercial farmer at the center of growth, and explains how growth translates into poverty reduction. This new book is a follow up to Mellor 's classic, prize-winning text, The Economics of

### Bangladesh's Economic and Social Progress MDPI

This textbook by Hendrik Van den Berg on Economic Growth and Development presents a long-awaited synthesis of Development Economics and Growth Theory. It also incorporates the recent contributions to our understanding of economic growth from the fields of economic history and the new institutional economics. By basing its analysis on the recent

advances in growth theory, the book offers a unified approach to all episodes of economic growth for countries at all levels of development and throughout history. Students will be comfortable with an analysis that enables them to understand economic growth in their own country as well as in economies very different from their own. The unified theoretical framework greatly facilitates students understanding of the process of economic growth, and the many cases and examples highlight the fascinating diversity of our world. *Economic Growth and Development* Edward Elgar Publishing

This book aims to provide knowledge on how infrastructure is planned and built in a typical developing country, and what key variables are there in the system limiting the efficient use of public investments in infrastructure. The book begins with a comprehensive literature review on construction and economic development, and trade and economic development. The focus of the book is on the case of Vietnam, with lessons drawn for other developing economies. The book

---

employs the mixed use of data to provide a stronger basis for analysis and interpretation of related government policies. Based on the research findings, the book recommends significant capacity building work for Vietnam to develop capacities that would remove constraints on the efficient use of public investments in infrastructure. The general principles of significant capacity building work which are useful for policy implications are introduced in the book. Analysts,

academics, public and private communities in developing countries can adopt the research findings as guiding principles to bring about changes in their current use of public investments in infrastructure, thus supporting their trade and economic growth in the long term.

*Environmental and Natural Resource Economics*  
International Monetary Fund  
This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and

Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th–20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing

---

process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on “Foreign Direct Investment and Economic Growth from Developing Countries in the

Short Run and Long Run” by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and

financial development to energy consumption and environmental degradation. On the issue of CO2 emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO2) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and

---

Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers

---

<p>of CSR. The authors also argued with ASEAN but also with EU that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively</p>	<p>partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on</p>	<p>provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam. <i>Macroeconomics</i> Irwin/McGraw-Hill The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. Development Economics does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in</p>

---

development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the

---

same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.

### **Entrepreneurship and Economic Development**

Springer

Gunnar Myrdal published his magnum opus, *Asian Drama: An Inquiry into the Poverty of Nations*, in 1968. He was deeply pessimistic about development prospects in Asia. The fifty years since then have witnessed a remarkable social and economic transformation in Asia - even if it has been uneven across countries

and unequal between people - that would have been difficult to imagine, let alone predict at the time. *Asian Transformations: An Inquiry into the Development of Nations* analyses the fascinating story of economic development in Asia spanning half a century. *Asian Transformations* sets the stage by discussing the contribution of Gunnar Myrdal to the debate on development then and now and providing a long-term historical perspective on Asia in the world. It then uses cross-country thematic studies on governments, economic openness, agricultural transformation, industrialization, macroeconomics, poverty and inequality, education and health,

employment and unemployment, institutions, and nationalisms to analyse processes of change while recognizing the diversity in paths and outcomes. Specific country studies on China, India, Indonesia and Vietnam, and sub-region studies on East Asia, Southeast Asia, and South Asia, further highlight turning points in economic performance and demonstrate factors underlying success or failure. Including in-depth studies by eminent economists and social scientists, *Asian Transformations* comprehensively examines the phenomenal changes that are transforming economies in Asia and shifting the balance of economic power in the world and

---

reflects on the future prospects for this continent over the next twenty-five years. It is a cohesive and multi-disciplinary study of a rapidly changing economic landscape, and makes an important contribution to understanding the complexities and processes of development from different perspectives.

*Contemporary Issues in  
Business and Economics*

World Bank Publications

This book assesses developmental experience in different countries as well as British expansion following the industrial revolution from a developmental

perspective. It explains why some nations are rich and others are poor, and discusses how manufacturing made economies flourish and spur economic development. It explains how today's governments can design and implement industrial policy, and how they can determine economically strategic sectors to break out of Low and Middle Income Traps. Closely linked to global trade and (im)balances, industrialization was never an accident. Industrialization explains how some countries

experience export-led growth and others import-led slowdowns. Many confuse industrialization with the construction of factory buildings rather than a capacity and skill building process through certain stages. Industrial policy helps countries advance through those stages. Explaining technical concepts in understandable terms, the book discusses the capacity and limits of the developmental state in industrialization and in general in economic

---

development, demonstrating how picking-the-winner type focused industrial policy has worked in different countries. It also discusses how industrial policy and science, technology and innovation policies should be sequenced for best results.

### **Special Economic Zones in**

**Africa** Zed Books

Now in its seventh edition, *Leading Issues in Economic Development* introduces a new co-author, James E. Rauch.

Maintaining the unique structure that the book has established over the last 35 years, Rauch has revised and updated this seventh

edition to strengthen the analytical and quantitative dimensions and to clarify contemporary and future problems of development policy. The co-authors integrate the most insightful materials in this wide-ranging field, offering students the opportunity to experience a variety of perspectives while helping them to keep sight of overarching themes. This edition adds two new chapters: "Income Distribution" and "Development and the Environment." It also now consolidates several chapters and increases the number of selections from leading professional journals. In this edition, both the selections and the authors' own overviews, notes, comments, and exhibits make greater use of

empirical analysis as well as modern economic theory. In all, *Leading Issues in Economic Development* provides fresh and serious attention to the interplay between development experience, changing views of economists, and policy.

**Fiscal Policy and Long-Term Growth** International Labor Office

This text maintains a problem and policy oriented approach to development economics. It focuses on people and government in developing countries.

**Patterns for College Writing**  
Cambridge University Press  
Textbook on economic

---

development in developing countries - discusses underdevelopment in the third world and problems of poverty, unemployment, income distribution and relevant economic theory, and stresses interdependence of the world economy as regards food, energy, natural resources, technology, etc. Diagrams, glossary of terminology, graphs, references and statistical tables.

**The Elusive Quest for Growth**

Oxford University Press  
Environmental and Natural  
Resource Economics is the best-selling text for natural resource economics and environmental

economics courses, offering a policy-oriented approach and introducing economic theory and empirical work from the field. Students will leave the course with a global perspective of both environmental and natural resource economics and how they interact. Complemented by a number of case studies showing how underlying economic principles provided the foundation for specific environmental and resource policies, this key text highlights what can be learned from the actual experience. This new, 11th edition includes updated data, a number of new studies and brings a more international focus to the subject. Key features include: Extensive

coverage of the major issues including climate change, air and water pollution, sustainable development, and environmental justice. Dedicated chapters on a full range of resources including water, land, forests, fisheries, and recyclables. Introductions to the theory and method of environmental economics including externalities, benefit-cost analysis, valuation methods, and ecosystem goods and services. Boxed 'Examples' and 'Debates' throughout the text which highlight global examples and major talking points. The text is fully supported with end-of-chapter summaries, discussion questions, and self-test exercises in the book and multiple-choice

---

questions, simulations, references, slides, and an instructor's manual on the Companion Website.

Infrastructure Investments in Developing Economies Pearson Education

This book evaluates Bangladesh's impressive economic and social progress, more often referred to as a 'development surprise'. In doing so, the book examines the gap in existing explanations of Bangladesh's development and then offers an empirically informed analysis of a range of distinctive factors, policies, and actions that have individually and collectively contributed to the progress of Bangladesh. In an inclusive way, the book covers

the developmental role, relation, and impact of poverty reduction, access to finance, progress in education and social empowerment, reduction in the climatic vulnerability, and evolving sectoral growth activities in the agriculture, garments, and light industries. It also takes into account the important role of the government and NGOs in the development process, identifies bottlenecks and challenges to Bangladesh's future development path and suggests measures to overcome them. By providing an inclusive narrative to theorize Bangladesh's development, which is still missing in the public discourse, this book posits that Bangladesh per se can offer a

development model to other developing countries.

**Perspectives on Labour Economics for Development**

Routledge

The book is orientated towards the teaching of economics within the context of the major problems of development and underdevelopment in Third World nations and fills a major void in the teaching materials available for this purpose. It has been written for use by first-year economic students at universities throughout Africa, Asia, Latin America and the Middle East.

*Decent Work and Economic Growth* PublicAffairs

In developing countries, labour markets play a central role in

---

determining economic and social progress since employment status is one of the key determinants of exiting poverty and promoting inclusion. Yet the reality in most developing countries is that the labour market fails to create the jobs in the formal economy that would help individuals and their families prosper. In recognition of these challenges, governments and other stakeholders in developing countries have increasingly prioritised policies and programmes to promote decent work. However, this requires navigating a range of

complex issues and debates surrounding the linkages between development processes and labour market outcomes. This volume consists of three main thematic parts. Part I provides a broad overview of key issues, including characterising the employment challenge in developing countries and the link between economic growth, distribution, poverty and employment. Drawing on the literature and country examples, Part II analyses the specific topics of wages, migration and education. The final section shifts to a more normative

focus, addressing labour market institutions and policies, along with systematic approaches to quantifying labour markets in developing countries. *Perspectives on Labour Economics for Development* is an invaluable reference for policy-makers in middle- and low-income countries as well as an ideal handbook for teachers and students of economics and development. Shrewd Samaritan Routledge Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer

---

<p>international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion,</p>	<p>but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how</p>	<p>production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography. <i>Good Health and Well-Being</i> Pearson Education India This collection of Todaro's essays focuses on a wide range of topics in economic development, including rural-urban migration, international</p>

legal and illegal migration, population growth, technological change, education, the environment and ethics.

Economic Development: Tenth Edition Oxford University Press, USA

E. Wayne Nafziger analyzes the economic development of Asia, Africa, Latin America, and East-Central Europe. The book is suitable for those with a background in economics principles. Nafziger explains the reasons for the recent fast growth of India, Poland, Brazil, China, and other Pacific Rim countries, and the slow, yet essential, growth for a turnaround of sub-

Saharan Africa. The fifth edition of prosperity; and a discussion of the text, written by a scholar of developing countries, is replete with real-world examples and up-to-date information. Nafziger discusses poverty, income inequality, hunger, unemployment, the environment and carbon-dioxide emissions, and the widening gap between rich (including middle-income) and poor countries. Other new components include the rise and fall of models based on Russia, Japan, China/Taiwan/Korea, and North America; randomized experiments to assess aid; an exploration of whether information technology and mobile phones can provide poor countries with a shortcut to how worldwide financial crises, debt, and trade and capital markets affect developing countries.
