## Growth Mechanisms and Sustainable Development of the Chinese Economy Taylor & Francis

There is long-standing debate on how population growth affects national economies. A new report from Population Matters examines the history of this debate and synthesizes current research on the topic. The authors, led by Harvard economist David Bloom, conclude that population age structure, more than size or growth per se, affects economic development, and that reducing high fertility can create opportunities for economic growth if the right kinds of educational, health, and labor-market policies are in place. The report also examines specific regions of the world and how their differing policy environments have affected the relationship between population change and economic development.

"This best-selling text offers a unique policy-oriented approach that uses models and concepts to illustrate real-world development problems. Retaining its hallmark accessibility throughout, the Eighth Edition uses the most current data, offering full coverage of recent advances in the field, and featuring a balanced presentation of opposing viewpoints on today's major policy debates. Economic Development includes extensive country-specific examples, with particular attention given to economic dislocations throughout Asia, Russia, and Brazil. Updated Country Case Studies and Comparative Case Studies allow students to apply concepts to specific developing nations."

Economic Development Springer  
Traditionally, development has been rooted in ideologies and assumptions prevalent in the developed world and in practices and strategies adopted by leading industrial nations. However, historically, eclectic ideas and approaches often clash with existing long-established notions

of progress and modes of realizing social and economic change. Managing Development in a Globalized World: Concepts, Processes, Institutions explores this topic by incorporating ideas and interpretations that have previously been neglected or given inadequate attention in the discourse on developing countries. It underscores development as a continuous process that must be supported by sound policies and efficient management, supplying a wider understanding of the field. The authors argue that the application of innovative development techniques and best practices is essential for obtaining optimum results in meeting the needs of society. They examine the style of managing development with a new perspective that links the phenomenon with changing demands and the interplay of internal/external actors and a host of stakeholders. An exploration of key sectors in development provides clear comprehension of problems and solutions. A careful synthesis of theoretical/conceptual and empirical literature, the book assesses real-world situations and provides insight into the operational dynamics of development policies, programs, and institutions. It focuses on goals, values, and dynamics of development management that are undergoing rapid changes and continue to be enhanced to alleviate poverty and improve living standards in an era of globalization and inter-regional and inter-institutional synergies. It highlights best practices essential for the efficient and effective delivery of human development services that are designed and put in place to obtain optimum results in meeting the needs of society.

## The Elusive Quest for Growth Routledge

This book throws new light on the study of India's development through an exploration of the triangular relationship between federalism, nationalism and the development process. It focuses on one of the seemingly paradoxical cases of impressive development and sharp federal conflicts that have been witnessed in the state of Punjab. The book concentrates on the federal structure of the Indian polity and it examines the evolution of the relationship between the centre and the state of Punjab, taking into account the emergence of Punjabi Sikh nationalism and its conflict with Indian nationalism. Providing a template to analyse regional imbalances and tensions in national economies with federal structures and competing nationalisms, this book will not only be of interest to researchers on South Asian Studies, but also to those working in the fields of politics, political economy, geography and development.

## The Elusive African Renaissance Routledge

This extensive work explores the changing world of religions, faiths and practices. It discusses a broad range of issues and phenomena that are related to religion, including nature, ethics, secularization, gender and identity. Broadening the context, it studies the interrelation between religion and other fields, including education, business, economics and law. The book presents a vast array of examples to illustrate the changes that have taken place and have led to a new world map of religions. Beginning with an introduction of the concept of the "changing world religion map", the book first focuses on nature, ethics and the environment. It examines humankind's eternal search for the sacred, and discusses the emergence of "green" religion as a theme that cuts across many faiths. Next, the book turns to the theme of the pilgrimage, illustrated by many examples from all parts of the world. In its discussion of the interrelation between religion and

education, it looks at the role of missionary movements. It explains the relationship between religion, business, economics and law by means of a discussion of legal and moral frameworks, and the financial and business issues of religious organizations. The next part of the book explores the many "new faces" that are part of the religious landscape and culture of the Global North (Europe, Russia, Australia and New Zealand, the U.S. and Canada) and the Global South (Latin America, Africa and Asia). It does so by looking at specific population movements, diasporas, and the impact of globalization. The volume next turns to secularization as both a phenomenon occurring in the Global religious North, and as an emerging and distinguishing feature in the metropolitan, cosmopolitan and gateway cities and regions in the Global South. The final part of the book explores the changing world of religion in regards to gender and identity issues, the political/religious nexus, and the new worlds associated with the virtual technologies and visual media.

### Capital Markets and Financial Resource

#### Mobilization in Developing Countries Longman Publishing Group

Capital Markets play a major role in mobilizing and allocating scarce resources in an economy and indeed they constitute a very important part of an economy for both developed and developing economies. To the developed world, the markets are part of everyday life for millions of people; ordinary and the elite, business class and policy makers. This is totally different for the developing world. The turbulent nature of the business world today necessitates that the working of Capital Markets is not only well understood by investors and issuers and all potential players in the market, but also made easily accessible for them and should therefore be brought to the mainstream economic planning of the developing world. The potentiality of the markets and their development synergy need be explored and developed in developing countries too. This simple Text Book serves to bridge this apparent gap by bringing to the fore, the significance of this segment of the financial system-the Capital Market, in effectively and efficiently mobilizing and allocating financial resources in a Developing Country context. This book has been organized in ten Chapters with an underlying motive of giving clarity to a cross section of readers. The first Chapter of the Book named Introduction introduces the theme of the Book by specifically addressing the key concepts therein namely Developing Countries and their characteristics or problems, what it takes to mobilize financial resources from both domestic and foreign based sources and the challenges thereof. Chapter two of the Book named Capital Formation in Developing Countries gives a digest of the major policies under the control of Developing Countries governments to enhance financial resource mobilization for national development of the respective countries. Chapter Three named Capital Formation and Capital Markets Investments describes how Capital Markets aid in the accumulation of Capital for a Developing Country through the

various investment opportunities availed by the Capital Market namely Stocks, Bonds and Preferred Shares. Chapter Four which is Capital Market Risk and Return Analysis clearly explains the monetary gains or otherwise, an investor should expect from his or her investment in the market. The specific benefits or rewards from investing in a Stock Market and the Risks inherent in all the various Capital Markets investments together with their probable sources are digested. Chapter Five provides tools of analyzing the worthiness of the investment to be made in the Capital Markets before investors make investment decisions regarding committing their monies into those Capital Markets investments. The Chapter presents how bonds, common stocks and preferred stocks are theoretically valued to determine their true or fair value, the basis upon which their market value or market price is determined. Chapter Six presents the various sources of capital for the operation of the firm, the cost of each source of funds, the determinants of the individual costs of capital and the relevancy of Capital Markets in this process. While performing all these functions, the Capital Market needs to secure the confidence of all market participants mainly the investors and issuers (both incumbent and potential) in order for it to attract and retain a vigorous business clientele. This requires that the market is efficient in executing its roles. Therefore the relevancy of the Efficient Capital Market Theory is presented in Chapter Seven, where the various forms of the EMH along with their empirical tests and ways through which Capital Markets can be made efficient in Developing Countries are identified. The operation of the Capital Market is discussed in Chapter Eight, where the related Capital Market Institutions and their roles in securities trading and funds mobilization are presented from a practical point of view, giving mention of the performance indicator of Stock Market indices. While Chapter Nine of the Book gives a thorough digest of the role Stock Markets play in helping solve some of the social economic problems faced by Developing Countries in general and hence giving the justification for their stand, Chapter Ten provides insights of how Capital Markets can be made Engines of Growth in Developing Countries. This is for the explicit contemplation of policy makers, investors as well as agitators of development in Developing Countries. Chinese Economic Development Springer Professor Ian Livingstone is one of a small group of British development economists who have achieved international renown and recognition. The objective of this book is to pay tribute to his life's work, particularly those aspects which related to key but challenging development issues. These issues include, at a broad level, the understanding of the economic forces determining the development of low income economies, more detailed "micro" work on agricultural development (irrigation in particular), decentralisation and local government finance, small scale enterprises, and large scale manufacturing development. Themes running through his work relate to his over-

riding concern for rigour and for socio-economic justice. Ian Livingstone consistently used the traditional tools of economic analysis as a means to increase understanding of development issues - in a way which was, itself, just as radical as the contributions of political scientists and sociologists. This volume has been produced with similar aims.

International Social Work Routledge

A result of more than four decades of teaching experience, this book deals with the problems of economic growth, development and eradication of poverty and unemployment. The book also includes an analytical study of important issues of environment and sustainable development.

The book not only explains the models and theories of economic growth but also critically evaluates their relevance to developing countries.

A major highlight of discussion in the context is the exploration of the widely accepted Amartya Sen's Capability Approach to development.

In Johannesburg at the World Summit on Sustainable Development in 2002, over one hundred and eighty states assumed a collective responsibility to advance and strengthen the interdependent and mutually reinforcing pillars of sustainable development economic development, social development, an environmental protection at the local, national, regional and global levels. This remarkable collection of papers, sponsored by the Centre for International Sustainable Development Law (CISDL), demonstrates that sustainable development serves as a unifying concept with the potential to facilitate much-needed respect for international law and timely implementation of diverse and overlapping international commitments. It builds on the substance of a rich and complex debate at the intersections among economic, social, and environmental law, bringing together a broad cross-section of viewpoints and voices. The authors review recent developments in WTO discussions and negotiations, and in the recent decisions of the WTO Appellate Body, from a sustainable development law perspective. They also survey relevant new developments in trade and economic agreements at regional, inter-regional and bi-lateral levels. The various essays focus on sustainable development aspects of key issues in recent trade negotiations such as the Singapore Issues (investment, competition, trade facilitation, and government procurement), intellectual property rights, investment arbitration and the linkage between the WTO and multilateral environmental accords, (MEA and  $\chi$ s).. Among the specific topics covered are the following: Emerging areas of law and policy in trade and sustainable development, The underlying development agendas in global trade law negotiations, Cooperation and potential negotiation on international competition law, Sustainable development aspects of intellectual property rights

negotiations, Overlaps between multilateral environmental accords (MEA and  $\chi$ s) and the WTO, Recent developments in WTO dispute settlement procedures and proceedings, Human rights and environmental opportunities from trade liberalisation and increased market access, Human rights and environment impact assessment techniques used to analyse trade agreements, Recent developments in bi-lateral and regional trade agreements. Trade, investment, and competition law practitioners and negotiators in developed and developing countries will find this book of great value, as will development and environment law professionals with responsibility for trade and WTO law related matters. With rich contributions from leading trade law practitioners, academics, and WTO panel and appellate body roster members, Sustainable Developments in World Trade Law offers a constructive, timely and accessible expert analysis of recent discussions and advances in the field, providing an integrated and essential guide to some of the most important issues in international economic law today.

The Routledge Handbook of Industry and Development is a global overview of industrialisation. Each chapter will provide readers with contemporary insights into this essential aspect of economic development. Industrialisation has been at the forefront of discussion on economic development since the earliest days of development economics. But over the last fifty years, the manufacturing sectors of different countries and regions have grown at strikingly different rates. In 1960 developing countries took a very small share of global manufacturing production. Today the position had changed radically with fast growth of manufacturing in many parts of what was originally the developing world, particularly in China and the rest of East Asia. On the other hand, countries in Africa and parts of Latin America have been largely left behind by this process of industrialisation. This volume aims to illuminate this uneven development and takes stock of the current issues that hinder and support industrialisation in low and middle income economies. This Handbook is a collection of chapters on different aspects of industrialisation experience in a range of countries. Key themes include, the role of manufacturing in growth, the nature of structural change at different stages of development, the role of manufacturing in employment creation, alternative options for trade and industrial policy, the key role of technology and technical change, and the impact of globalisation and the spread of global value chains and foreign direct

investment on prospects for industrialisation. Several chapters discuss individual country experiences with examples from India, Mexico, South Africa and Tanzania, as well as an overview of African industrialisation. This authoritative Handbook will be a key reference source for those studying or wishing to understand contemporary economic development. Offering inspiration and direction for future research, this landmark volume will be of crucial importance to all development economics scholars and researchers.

This Volume XIV analyses the New Growth and Poverty Alleviation Strategies for Africa. Institutional issues and perspectives in designing new growth and poverty alleviation strategies are considered in various case studies (Cote d'Ivoire, Nigeria, Botswana and Tanzania). Other studies deal with institutional problems of resource-rich countries after conflict (Sudan), and with the institutions to enhance environmental protection parallel with economic growth and poverty reduction (Niger). Further studies deal with institutions to bridge the gap between formal and informal entrepreneurial sectors in Kenya and Tanzania. Local issues and perspectives for designing new growth and poverty alleviation strategies are considered in case studies on rural-urban development gaps in Tanzania, and on microfinance as an instrument for new growth and poverty alleviation strategies (Tanzania and Eritrea). A study on small farmers in Ghana provides information on the role they can play in value chains. Two studies on Nigeria highlight the local and the sub-regional health and poverty alleviation programmes and the relation to growth. Book Reviews and Book Notes on the theme are part of the volume. This Volume builds the foundation for a comprehensive strategy of policy reforms in Africa so as to integrate new growth and poverty alleviation strategies. Complementary to Volume XIV is Volume XIII on New Growth and Poverty Alleviation Strategies for Africa - International and Regional Perspectives. Both Volumes are of importance for all those who work in African countries as officials, executives, managers, researchers, and policy-makers, but also for all those who actively support Africa's development concerns at the international,

regional, country, local and project levels. They will experience this Volume XIV and also the complementary Volume XIII as indispensable sources of insight, reference and inspiration.

Development as Freedom MIT Press

The establishment of good governance is a major challenge for the developing world, along with the need to sustain the progress resulting from developmental efforts. Although there are numerous studies on the development and governance of emerging nations, few volumes make a serious effort to bring together these two critical concepts.

International Development Governance combines the two concepts - development and governance - by examining the issues and problems faced by nations in their attempts to establish sustainable governance.

This textbook also initiates discussions on the concept of development governance in an international context. The book fills the gap in existing literature by drawing upon the experience and expertise of scholars from a broad spectrum of knowledge. Their views explain the issues and problems with reference to a number of tools that could establish "development governance" and sustain it. The text offers in-depth examinations of developmental sectors, resulting in a textbook that will inspire future public officials, policy makers, and consultants to contribute to the betterment of life for citizens of developing countries.

This book outlines and analyzes the economic development of China between 1949 and 2007. Rather than being narrowly economic, the book addresses many of the broader aspects of development, including literacy, morality, demographics and the environment. The distinctive features of this book are its sweep and that it does not shy away from controversial issues. For example, there is no question that aspects of Maoism were disastrous but Bramall argues that there was another side to the whole programme. More recently, the current system of government has presided over three decades of very rapid economic growth. However, the author shows that this growth has come at a price. Bramall makes it clear that unless radical change takes place, Chinese growth will not be sustainable. This large, comprehensive text is relevant to all those studying the economic history of China as well as its contemporary economy. It is also useful more generally for students and researchers in the fields of international and development economics.
