In *Earth in Mind*, noted  
environmental educator  
David W. Orr focuses not  
on problems in education,  
but on the problem of  
education. Much of what  
has gone wrong with the  
world, he argues, is the  
result of inadequate and  
misdirected education that:  
alienates us from life in the  
name of human domination  
causes students to worry  
about how to make a living

before they know who they are overemphasizes success and careers separates feeling from intellect and the practical from the theoretical deadens the sense of wonder for the created world The crisis we face, Orr explains, is one of mind, perception, and values. It is, first and foremost, an educational challenge. The author begins by establishing the grounds for a debate about education and knowledge. He describes the problems of education from an ecological perspective, and challenges the terrible simplifiers who wish to substitute numbers for values. He follows with a presentation of principles for re-creating education in the broadest way possible, discussing topics such as biophilia, the disciplinary structure of knowledge, the

architecture of educational buildings, and the idea of ecological intelligence. Orr concludes by presenting concrete proposals for reorganizing the curriculum to draw out our affinity for life.
