With over a million copies sold, Economics in One Lesson is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the “Austrian School,” which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He was the founding vice-president of the Foundation for Economic Education and an early editor of The Freeman magazine, an influential libertarian publication. Hazlitt wrote Economics in One Lesson, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of Economics in One Lesson. Hazlitt’s focus on non-governmental solutions, strong – and strongly reasoned – anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government intervention make Economics in One Lesson every bit as relevant and valuable today as it has been since publication.

The second edition of a comprehensive state-of-the-art graduate level text on microeconomic methods, substantially revised and updated. The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research, cross section and data panel methods. By focusing on assumptions that can be given behavioral content, the book maintains an appropriate level of rigor while emphasizing intuitive thinking. The analysis covers both linear and nonlinear models, including models with dynamics and/or individual heterogeneity. In addition to general estimation frameworks (particular methods of moments and maximum likelihood), specific linear and nonlinear methods are covered in detail, including probit and logit models and their multivariate, Tobit models, models for count data, censored and missing data schemes, causal (or treatment) effects, and duration analysis. Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures, allowing assumptions to be separated into population and sampling assumptions. This second edition has been substantially updated and revised. Improvements include a broader class of models for missing data problems; more detailed treatment of cluster problems, an important topic for empirical researchers; expanded discussion of "generalized instrumental variables" (GIV) estimation; new coverage (based on the author's own recent research) of inverse probability weighting; a more complete framework for estimating treatment effects with panel data, and a firmly established link between econometric approaches to nonlinear panel data and the "generalized estimating equation" literature popular in statistics and other fields. New attention is given to explaining when particular econometric methods can be applied; the goal is not only to tell readers what does work, but why certain "obvious" procedures do not. The numerous included exercises, both theoretical and computer-based, allow the reader to extend methods covered in the text and discover new insights.

This timely reissue of Richard Hofstadter's classic work on the fringe groups that influence American electoral politics offers an invaluable perspective on contemporary domestic affairs.In The Paranoid Style in American Politics, acclaimed historian Richard Hofstadter examines the competing forces in American political discourse and how fringe groups can influence – and derail – the larger agendas of a political party. He investigates the politics of the irrational, shedding light on how the behavior of individuals can seem out of proportion with actual political issues, and how such behavior impacts larger groups. With such other classic essays as "Free Silver and the Mind of 'Coin' Harvey" and "What Happened to the Antitrust Movement?, " The Paranoid Style in American Politics remains both a seminal text of political history and a vital analysis of the ways in which political groups function in the United States.

"Mathematical thinking is not the same as 'doing math'--unless you are a professional mathematician. For most people, 'doing math' means the application of procedures and symbolic manipulations. Mathematical thinking, in contrast, is what the name reflects, a way of thinking about things in the world that humans have developed over three thousand years. It does not have to be about mathematics at all, which means that many people can benefit from learning this powerful way of thinking, not just mathematicians and scientists."--Back cover.

Macroeconomics for AP® Abrams

Why are adults in their twenties and thirties stuck in their parents’ homes in the world’s wealthiest countries? There’s no question that globalization has drastically changed the cultural landscape across the world. The cost of living is rising, and high unemployment rates have created an untenable economic climate that has severely compromised the path to adulthood for young people in their twenties and thirties. And there’s no end in sight. Families are hunkering down, expanding the reach of their households to envelop economically vulnerable young adults. Acclaimed sociologist Katherine Newman explores the trend toward a rising number of “accordion families” composed of adult children who will be living off their parents’ retirement savings with little means of their own when the older generation is gone. While the trend crosses the developed world, the cultural and political responses to accordion families differ dramatically. In Japan, there is a sense of horror and fear associated with “parasite singles,” whereas in Italy, the “cult of mammismo,” or mamma’s boys, is common and widely accepted, though the government is rallying against it. Meanwhile, in Spain, frustrated parents and millenials angrily blame politicians and big business for the growing number of youth forced to live at home. Newman’s investigation, conducted in six countries, transports the reader into the homes of accordion families and uncovers fascinating links between globalization and the failure-to-launch trend. Drawing from over three hundred interviews, Newman concludes that nations with weak welfare states have the highest frequency of accordion families while the trend is virtually unknown in the Nordic countries. The United States is caught in between. But globalization is reshaping the landscape of adulthood everywhere, and the consequences are far-reaching in our private lives. In this gripping and urgent book, Newman urges Americans not to simply dismiss the boomerang generation but, rather, to strategize how we can help the younger generation make its own place in the world.
