EduGorilla Community Pvt. Ltd.

Why do hard-working students who understand all the economic concepts not do well in GCE A Level Economics examinations? The reason is surprisingly simple. There are two areas that students need to do well in — content mastery and Economics-specific examination skills. Students who have revised the content thoroughly could still perform poorly because they lack the latter. This book is meant to fill this gap by being the first book that makes the full range of these examination skills explicit. Newly updated to follow the 2023 Economics syllabus, the skills covered in this book are organized by question type. The first section covers the skills needed to answer case study questions and the second section covers the skills needed

to answer essay questions. Each skill is illustrated using worked examples of examination-type materials and questions. At the end of each section, a summary of the skills required is provided to enable students to do a quick revision before the relevant papers.

Studies in World History Volume 1 (Teacher Guide) Penguin

This book presents a fascinating story about how academia got it all wrong. Was it an academic conspiracy? Was it peculiar social pressures in academia? Regardless of how it all came about, it is time to teach our children financial literacy instead of economics. Financial literacy is a course that prepares our children for success in today ' s economic society. Typical economics courses do nothing to prepare your child for understanding day to day economic responsibility. This book presents the reasons to join the battle. It is time to stand up and demand relevant education from your state education system.

Remanufacturing and Remanufacturability Assessment for the Circular Economy Council for Economic Educat

In the past decade, the growing realization that biodiversity and human wellbeing are inextricably linked has led to the adoption of numerous environmental policies. The concept of the Green Economy has gained particular attention as an economic system where growth is possible within environmental limits. The preservation of ecosystem services and the halt of biodiversity loss are identified as key pillars of the Green Economy. Despite the concept's momentum there is still no clear understanding of how biodiversity fits within a Green Economy. In the current debate, biodiversity is rarely acknowledged in economic sectors other than agriculture, forestry, fisheries and tourism, and when it is acknowledged biodiversity and its conservation feature more as buzzwords than as concrete and tangible components of the Green Economy. This book aims to identify, understand and offer pragmatic

recommendations of how biodiversity conservation can become an agent of green economic development. This book establishes ways to assess biodiversity's contributions to the economy and to meaningfully integrate biodiversity concerns in green-economy policies.
