In recent years there has been increasing discontent with the abstract nature of mainstream economics. Not only does this make the subject less relevant to real issues, it drives a wedge between economics and other disciplines ostensibly addressing the same issues. *Borderlands of Economics* explores the ways in which economics might be reconnected, both with the real world and with other disciplines.

Principles of Economics 2e Cambridge University Press

This classic text offers a broader intellectual foundation than traditional principles textbooks. It introduces students to both traditional economic views and their progressive critique. Revised, expanded, and updated for this new edition, the text puts the study of microeconomics, macroeconomics, and globalization in their historical context. While covering the same topics as a traditional text, it also offers a richer discussion of economic history and the history of economic thought, including the ideas of Karl Marx, Thorstein Veblen, and John Maynard Keynes. This allows students to see economics as a way of understanding the world - as a lens for social analysis - rather than, as immutable truth or ideal to which the world should be molded. This completely revised edition incorporates new chapters on microeconomics and macroeconomics, as well as more graphs to enhance the theoretical presentations. Unlike the previous editions, it includes many pedagogical tools to encourage student participation and learning. Each of the

56 chapters opens with Learning Objectives, and key terms appear in boldface within the text and are listed at the end of each chapter. Other end-of-chapter material includes Summary of Major Points, Analytical Questions, and References. An online Instructor's Manual is available to professors who adopt the text.

Economics, Today & Tomorrow

Berrett-Koehler Publishers

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and

infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

In Austrian economic thought, "human action" guides all social and cultural experience. For both the real world and for fictional texts, this starting point can illuminate literature in new ways and offer valuable insight for literary critics who have previously been beholden to Marxism and other anti-capitalist perspectives. In *Re-Reading Economics in Literature: A Capitalist Critical Perspective*, Matt Spivey posits that in its relationship to literature, Austrian economic criticism entails a methodology that embraces the following: 1) an analytical reading that promotes both the individual artist as the creator of literature and the individual reader as the consumer of literature; 2) an understanding of the entrepreneurial quality of literature, that capitalism is a system that embraces creativity and evolution in the marketplace; and 3) a recognition of subjective

value as fundamental to human choice and action, both in art and in the real world. In addition to the study of the individual, Spivey also incorporates the concepts of business cycles, government intervention, social dynamics, and technological evolution in his analysis. Scholars of literary studies and economics will find this book particularly useful.

Texts by Boris Hessen and Henryk Grossmann W. W. Norton & Company
Foundations of Economics breathes life into the discipline by linking key economic concepts with wider debates and issues. By bringing to light delightful mind-teasers, philosophical questions and intriguing politics in mainstream economics, it promises to enliven an otherwise dry course whilst inspiring students to do well. The book covers all the main economic concepts and addresses in detail three main areas: * consumption and choice * production and markets * government and the State. Each is discussed in terms of what the conventional textbook says, how these ideas developed in historical and philosophical terms and whether or not they make sense. Assumptions about economics as a discipline are challenged, and several pertinent students' anxieties ('Should I be studying economics?') are discussed.
