Economic Governance in Europe Routledge

This is an open access book. As a leading role in the global megatrend of scientific innovation, China has been creating a more and more open environment for scientific innovation, increasing the depth and breadth of academic cooperation, and building a community of innovation that benefits all. Such endeavors are making new contributions to the globalization and creating a community of shared future. To adapt to this changing world and China's fast development in the new era, The 2022 International Conference on Economics, Smart Finance and Contemporary Trade to be held in July 2022. This conference takes "bringing together global wisdom in scientific innovation to promote high-quality development" as the theme and focuses on cutting-edge research fields including Economics, Smart Finance and Contemporary Trade. This conference aims to boost development of the Greater Bay Area, expand channels of international academic exchange in science and technology, build a sharing platform of academic resources, promote scientific innovation on the global scale, strengthen academic cooperation between China and the outside world, enhance development of new energy and materials and IT, AI, and biomedicine industries. It also aims to encourage exchange of information on frontiers of research in different areas, connect the most advanced academic resources in China and the world, turn research results into industrial solutions, and bring together talents, technologies and capital to boost development.

This book offers a critical perspective from which to observe evolution of the Euro Area and the European Union in these times of growing economic and political conflict.

Political and Economic Dynamics of the Eurozone Crisis Routledge

This book revisits some of the persisting challenges of development of India, which remain unresolved even after twenty-five years of economic reforms and almost fifteen years of high growth rate. These include defining purpose of development, inequality, labour, work, unemployment, agrarian distress and migration. The book questions the overemphasis on growth to the extent of neglecting basic issues of development. With a number of contributions re-imagining development and its political economy, the book discusses above mentioned issues in light of new data and more recent conceptions of the issues. The contributors of this volume are eminent researchers in their respective field. Presenting primary as well as secondary data, the book considers the latest advances and research and also addresses new challenges like the global reorganization of production and the consequences for labour and the world of work, along with skills question. World of work has received detailed investigation in this book. This is a timely addition in existing literature especially in context of pandemic and lockdown. Informality and un/employment question is addressed in this context. Relationship among poverty, inequality and growth is examined in light of newer understanding. Agrarian distress is looked in a broader context. A number of papers are examining migration question by expanding coverage of migration and including labour mobility as apart of migration debate. The present crisis of migrant labour and absence of social security for these workers is also discussed. This book is primarily intended for those interested in recent advances on some of the basic aspects of development, like poverty, inequality, informality, word of work, migration and labour mobility. It is also useful for researchers, policy makers, journalists and civil society organizations working on these issues.

A Political Economy of the Middle East Taylor & Francis

European economic recovery appears to be taking hold. So is the European crisis over? The acute phase of the crisis passed, however a number of medium and long term issues remain. The policies of “ internal devaluations ” are working, albeit slowly, to restore competitiveness in the countries most affected by the crisis. However, growth remains at best sluggish. The medium and long term outlook remains highly uncertain, fomenting social tensions and endangering political stability. The restoration of economic dynamism is increasingly perceived as the answer to the question of the “ European ” future – economically, politically and socially. There is a broad consensus that dynamic structural reforms and the restoration of competitiveness at the level of the global economy are key answers to current European challenges. However, whatever the form these may take, the transfer of resources is implicit (and seemingly necessary), to underpin the current structure of eurozone. This indeed raises the question of governance – both fiscal and monetary. After all, the provision of resources implies an allocation – and it is hard to imagine that resources will be provided to the common pool unless the providers have some say with respect to allocation. And that requires some form of common (i.e. centralized) decision-making procedures, in all likelihood exceeding the common understanding of the *acquis communautaire* as it exists today – i.e. some form of the effective political arrangement. In this context, the basic idea which connects all contributions in this volume is the analysis of the problems which affected the Eurozone in the past decade and the challenges and dilemmas the Eurozone will face in the coming years.

A Political Economy of the Middle East is the most comprehensive analysis of developments in the political economy of the region over the past several decades, examining the interaction of economic development processes, state systems and policies, and social actors in the Middle East. The fourth edition, with new authors Melani Cammett and Ishac Diwan, has been thoroughly revised, with two new introductory chapters that provide an updated framework with which to understand and study the many changes in demography, education, labor markets, urbanization, water and agriculture, and international labor migration in the recent years. The new edition also includes: a new chapter that charts the political economy of the Gulf states and, in particular, the phenomenal growth of oil economies; a new chapter on the rise of "crony capitalism;" and increased coverage of the changes in civil society and social movements in the region, including an exploration of the causes, dynamics, consequences, and aftermath of the Arab uprisings.

Economics of Immigration provides students with the tools needed to examine the economic impact of immigration and immigration policies over the past century. Students will develop an understanding of why and how people migrate across borders and will learn how to analyze the economic causes and effects of immigration. The main objectives of the book are for students to understand the decision to migrate; to understand the impact of immigration on markets and government budgets; and to understand the consequences of immigration policies in a global context. From the first chapter, students will develop an appreciation of the importance of immigration as a separate academic field within labor economics and international economics. Topics covered include the effect of immigration on labor markets, housing markets, international trade, tax revenues, human capital accumulation, and government fiscal balances. The book also considers the impact of immigration on what firms choose to produce, and even on the ethnic diversity of restaurants and on financial markets, as well as the theory and evidence on immigrants’ economic assimilation. The textbook includes a comparative study of immigration policies in a number of immigrant-receiving and sending countries, beginning with the history of immigration policy in the United States. Finally, the book explores immigration topics that directly affect developing countries, such as remittances, brain drain, human trafficking, and rural-urban internal migration. Readers will also be fully equipped with the tools needed to understand and contribute to policy debates on this controversial topic. This is the first textbook to comprehensively cover the economics of immigration, and it is suitable both for economics students and for students studying migration in other disciplines, such as sociology and politics.

Since World War II, a growing number of jurisdictions in both the developing and industrialized worlds have adopted progressive constitutions that guarantee social and economic rights (SER) in addition to political and civil rights. Parallel developments have occurred at transnational level with the adoption of treaties that commit signatory states to respect and fulfil SER for their peoples. This book is a product of the International Social and Economic Rights Project (iSERP), a global consortium of judges, lawyers, human rights advocates, and legal academics who critically examine the effectiveness of SER law in promoting real change in people’s lives. The book addresses a range of practical, political, and legal questions under these headings, with acute sensitivity to the racial, cultural, and gender implications of SER and the path-breaking SER jurisprudence now emerging in the "Global South". The book brings together internationally renowned experts in the field of social and economic rights to discuss a range of rights controversies from both theoretical and practical perspectives. Contributors of the book consider specific issues in the litigation and adjudication of SER cases from the differing standpoints of activists, lawyers, and adjudicators in order to identify and address the specific challenges facing the SER community. This book will be of great use and interest to students and scholars of comparative constitutional law, human rights, public international law, development studies, and democratic political theory.

Problems of climate change, biodiversity and air pollution are clearly growing globally, but more particularly in Asia because of its economic importance and richness in nature. The increasing interest in environmental and resource economics applied in regions of Asia will make this book an outstanding resource to the existing literature, particularly in the fields of environmental and resource economics and the integration of applied content in traditional and agricultural development. At present there is no single handbook or text on the state of current knowledge in environmental economics in Asia or one which offers a comprehensive guide to students and academics on the subjects of environmental economics research. This book will help to fill the gap in the existing literature.

In recent decades urban regions around the world have engaged in a new process of development based on the creation of new knowledge. Amidst the globalization of economic activities and the arrival of transformative technologies, knowledge has become the key driver of competitiveness and is profoundly reshaping the patterns of economic growth and activity. This book offers a comprehensive new model of the rise of a Knowledge Economy and its evolutionary development in the Megalopolis. These regions are developing new institutions and governance mechanisms to adapt, disseminate, and utilize available knowledge to promote continuing development of their Knowledge Economies. However, such developments are accompanied by increasing inequalities in incomes and in urban services. This book examines the resilience of some urban regions and their recent emergence as vibrant Knowledge Economies. It also reviews the recent renewal and

growth in the Megalopolis-- stretching along the Atlantic Seaboard along the metropolitan areas of Boston, New York, Philadelphia, Baltimore and Washington DC. This book will appeal to researchers and professionals interested in urban and regional development, and to business groups interested in economic development.

Meticulously researched and written by Dr Amer K. Hirmis the book takes readers 6000 years back to early Mesopotamian polity, culture, and religious codes which shaped the economy, and continue to shape much of the body of Iraq’s polity, economy and society today. Economic inefficiency, inequality and lack of sufficient employment are common threads that run throughout Mesopotamian/Iraqi economic history. The persistence of poverty, high unemployment, conscious discrimination against women, and a polity dictating blind allegiance and obedience from the subjects to the ruler, denied the Iraqis achieving economic development, the ultimate aim of which is the sustained improvement of the well-being of the people. Even when economic growth was attained, it was desperately non-inclusive. With a novel approach to economic development, this book examines Iraq’s economy over the past 100 years. It establishes the historical roots in the consumption patterns, nature of the producers, the economic structure, trade, monetary and fiscal policy and resource allocation. In all these areas the echoes from the ancient past are striking. The principles of Sumerian taxes are still applied in present-day Iraq. The book proposes a set of conditions, which will need to be created for Iraq to achieve economic development and functional democracy, in the distant future.

The Economics of Iraq Oxford University Press

This is the first book to provide a full and dispassionate account of the politics and economics of the Eurozone crisis, focusing on the interlinked origins and impacts of the Euro-Zone crisis and the policy responses to it. The book is distinguished from existing research by its avoidance (and rejection) of the too-often simplistic analysis that has characterized political, media and regrettably some academic coverage, and by its attempt to escape from the tyranny of day-to-day events and short-term developments. Each of the contributors identifies an important question and undertakes a careful empirical, theoretically-informed analysis that produces novel perspectives. Together they seek to balance many of the existing accounts that have rushed to sometimes unwarranted conclusions, concerning, for example, the locus of institutional power in European crisis-management; the power and centrality of particular member states, notably Germany which has been attributed with 'hegemonic' status; the supposed entrapment of EU policy makers by an 'austerity ideology'; and the deep flaws that apparently afflict the solutions to the crisis put painstakingly in place, such as Banking Union. While it will be some time before the EU can put the crisis behind it, and the dust finally settles on the revised institutional system that emerges, The Political and Economic Dynamics of the Eurozone Crisis marks an important step towards a considered, reflective analysis of the tumultuous events and developments of the crisis period.

Reconstructing Urban Economics Routledge

This issue discusses a number of factors affecting global growth, as well as growth prospects across the world’s main countries and regions. It assesses the ongoing recovery from the global financial crisis in advanced and emerging market economies and evaluates risks, both upside and downside, including those associated with commodity prices, currency fluctuations, and financial market volatility. A special feature examines in detail causes and implications of the recent commodity price downturn; analytical chapters look at the effects of commodity windfalls on potential output and of exchange rate movements on trade.

How Economics Should Be Done Elsevier

David Colander has been writing about economic methodology for over 30 years, but he goes out of his way to emphasize that he does not see himself as a methodologist. His pragmatic methodology is applicable to what economists are doing and attempts to answer questions that all economists face as they go about their work. The articles collected in this volume are divided, with the first part providing a framework underlying Colander’s methodology and introducing Colander’s methodology for economic policy within that framework. Part two presents Colander’s view on the methodology for microeconomics, while part three looks at Colander’s methodology for macroeconomics. The book closes with discussions of broader issues.

OECD Economic Surveys: Estonia 2015 Routledge

The 2009 European sovereign debt crisis and the EU’s policy response to it have prompted scholars to re-think whether diverse national models of capitalism can thrive within the European Union (EU). Are some national economic systems better suited to adapt to European integration than others, and if so, why? Contributions within this volume provide a qualified yes to these questions raised, concluding that the EU favors export-led growth models while it penalizes and discourages domestic consumption-oriented growth paths, particularly those that are financed by debt-accumulation. The book questions whether the EU is capable of integrating these diverse capitalist regimes. This volume adds a comparative capitalism perspective to EU integration scholarship in order to demonstrate that ever-closer union is not capable of accommodating diversity in national economic institutions. Chapters in this volume provide an innovative framework for understanding

what factors related to European integration impede the economic and political integration of diverse European market economies. While recent comparative capitalism literature highlights that European monetary integration has favored export-led growth regimes, contributions in this volume outline that the EU’s prioritization of export-led growth over domestic-demand led growth is present in other facets of integration, including EU accession, financial integration, the free movement of people, fiscal governance and the Europe 2020 growth strategy. The chapters in this book were originally published as a special issue of New Political Economy.

Theory and Method of Evolutionary Political Economy Edward Elgar Publishing

Neoclassical economics, the intellectual bedrock of modern capitalism, faces growing criticisms, as many of its key assumptions and policy prescriptions are systematically challenged. Yet, there remains one field of economics where these limitations continue virtually unchallenged: the study of cities and regions in built-environment economics. In this book, Franklin Obeng-Odoom draws on institutional, Georgist and Marxist economics to clearly but comprehensively show what the key issues are today in thinking about urban economics. In doing so, he demonstrates the widespread tensions and contradictions in the status quo, showing how to reconstruct urban economics in order to create a more just society and environment.

World Economic Outlook, October 2015 Edward Elgar Publishing

The Law and Economics approach to law dominates the intellectual discussion of nearly every doctrinal area of law in the United States and its influence is growing steadily throughout Europe, Asia, and South America. Numerous academics and practitioners are working in the field with a flow of uninterrupted scholarship that is unprecedented, as is its influence on the law. Academically every major law school in the United States has a Law and Economics program and the emergence of similar programs on other continents continues to accelerate. Despite its phenomenal growth, the area is also the target of an ongoing critique by lawyers, philosophers, psychologists, social scientists, even economists since the late 1970s. While the critique did not seem to impede the development of the field, it certainly has helped it to become more sophisticated, inclusive, and mature. In this volume some of the leading scholars working in the field, as well as a number of those critical of Law and Economics, discuss the foundational issues from various perspectives: philosophical, moral, epistemological, methodological, psychological, political, legal, and social. The philosophical and methodological assumptions of the economic analysis of law are criticized and defended, alternatives are proposed, old and new applications are discussed. The book is ideal for a main or supplementary textbook in courses and seminars on legal theory, philosophy of law, jurisprudence, and (of course) Law and Economics.
