Springer

Cultural citizenship is a recently developed concept in discussions on multicultural society, the media society, consumerism, and political theory. It addresses the various ways in which citizenship is becoming mixed up with culture, either through globalisation processes (involving new cultural identities, immigrations, culture industries) or by increasingly life-style oriented types of action. In

the face of these challenges, the good old notion of citizenship seems in need of some assistance. This book takes a fresh look at cultural citizenship by exploring it from political-philosophical angles. It seeks to develop explicitly normative perspectives on the present debates around culture. What do the novel national and global constellations mean with respect to inclusion and exclusion, participation and marginalisation, political rights and 'mere' cultural practices? Moreover, this volume's authors aim to develop notions of cultural citizenship beyond the liberal political paradigm that associates it with 'cultural rights', 'cultural capital' or the 'consumer-citizen'. They engage the concept to re-think politics in both its meanings of citizenship practices and governance practices vis-à-vis citizens. The authors address a range of pertinent issues, exploring historical as well as present-day understandings, and theoretical as well as policy applications of the notion of cultural citizenship. This book was originally published as a special issue of Citizenship Studies.

This comprehensive guide covers all aspects of action learning, one of the most widely used development methods in health, social and community care. The book addresses the theory and practice of action learning in these fields, and considers action learning as an adult educational ethos as well as a helpful tool. Based upon emerging experience, it identifies good practice in action learning and offers a wide range of resources to enable individuals and organisations extract maximum benefit from this approach. Offering practical tips grounded in sound educational

---

principles, this book is invaluable reading for all senior managers and professionals considering using action learning for leadership, management and organisation development purposes, including organisation development practitioners and action learning facilitators, and for medical and healthcare educators and their counterparts in social and community care looking for a general introduction to this growing field.

Analysts generally agree that,

in the long term, the biggest challenge to American hegemony is not military, but rather China's economic rise. This perception is spread in no small measure because Xi Jinping has – in the face of patent military inferiority – conducted himself much more boldly on the world stage than Hu Jintao. Meanwhile, China has also begun conjuring up an alternative vision for global leadership, now widely termed as the 'China model'. This book therefore offers a critical and comprehensive explanation of the China model and its origins. Using a range of case

studies, covering varying historical and geographical approaches, it debates whether the Chinese experience in the last three decades of economic reform should be interpreted as an answer to the reigning hegemony of neoliberalism, or rather a further reinforcement of it. To answer these questions, it provides an investigation into what China may have learned from its East Asian neighbours' earlier economic successes. It also examines how it is responding to and might even reconfigure the world political-economic system as it develops fresh and

---

potentially more powerful regulatory capacities. Providing a multi-dimensional analysis of the 'China model', the book will be of interest to students and scholars of Chinese Economics, Economic Geography and Chinese Studies.

The Principle of Sustainability, 2nd Edition ANU Press

The topic of 'stranded assets' created by environment-related risk factors has risen up the agenda dramatically, influencing many pressing topics in relation to global environmental change. For example: how best to manage

the exposure of investments to environment-related risks so that financial institutions can avoid stranded assets; the financial stability implications of stranded assets and what this means for macroprudential regulation, microprudential regulation, and financial conduct; reducing the negative consequences of stranded assets by finding ways to address unemployment, lost profits, and reduced tax income; internalising the risk of stranded assets in corporate strategy and decision-making, particularly in carbon intensive sectors susceptible to the

effects of societal action on climate change; underpinning arguments by civil society campaigns attempting to secure rapid decarbonisation to reduce the scale of anthropogenic climate change; and designing decarbonisation plans developed by governments, as well as companies and investors. Taken as a whole, this book provides some of the latest thinking on how stranded assets are relevant to investor strategy and decision-making, as well as those seeking to understand and influence financial institutions. This book was originally published as a

---

special issue of the Journal of Sustainable Finance and Investment.

**Proceedings of the 2nd International Conference on Management, Leadership and Governance**

Routledge  
The development of both elite, high performance sport and mass participation, grassroots-level sport are central concerns for governments and sports governing bodies. This important new study is the first to closely examine the challenges and opportunities for sports development in the United States, a global sporting giant with a unique, market-

driven sporting landscape. Presenting an innovative model of integrated sports development, the book explores the inter-relationship between elite and mass sport across history, drawing on comparative international examples from Australia to the former USSR and Eastern bloc countries. At the heart of the book is an in-depth empirical study of three (traditional and emerging) sports in the US – tennis, soccer and rugby – that offer important lessons on the development of elite sport, methods for increasing participation, and the

establishment of new sports in new markets. No other book has attempted to model sports development in the United States in such depth before. Therefore this should be essential reading for all students, researchers, administrators or policy-makers with an interest in sports development, sports management, sports policy, or comparative, international sport studies.  
Contemporary Climate Change Debates Springer  
In Cents and Sensibility, an eminent literary critic and a leading economist make the

---

case that the humanities—especially the study of literature—offer economists ways to make their models more realistic, their predictions more accurate, and their policies more effective and just. Arguing that Adam Smith’s heirs include Austen, Chekhov, and Tolstoy as much as Keynes and Friedman, Gary Saul Morson and Morton Schapiro trace the connection between Adam Smith’s great classic, *The Wealth of Nations*, and his less celebrated book on ethics, *The Theory of Moral Sentiments*. The authors contend that a few decades

later, Jane Austen invented her groundbreaking method of novelistic narration in order to give life to the empathy that Smith believed essential to humanity. More than anyone, the great writers can offer economists something they need—a richer appreciation of behavior, ethics, culture, and narrative. Original, provocative, and inspiring, *Cents and Sensibility* demonstrates the benefits of a dialogue between economics and the humanities and also shows how looking at real-world problems can revitalize the study of literature itself. Featuring a new preface,

this book brings economics back to its place in the human conversation.

Building Better Schools with  
Evidence-based Policy:  
Adaptable Policy for Teachers  
and School Leaders provides an  
extensive set of free-to-use  
policies for building better

schools. The policies included in  
this book cover a broad range of  
popular topics for schools that are  
not readily accessible, and each  
policy is built on theory, driven by  
research, and created by experts.  
Each policy is based on  
substantial evidence, and this is  
ensured through the inclusion of  
contributors who are active and  
highly reputable in their  
respective field. Most schools are  
obliged to write and maintain  
policy, and not all school leaders  
have the required skills, time, or  
expertise to do this effectively.  
Building Better Schools with  
Evidence-based Policy: Adaptable  
Policy for Teachers and School  
Leaders is a time-saving resource  
for schools. It aims to address the

---

reported research-to-practice gap in education by delivering accessible evidence-based practice in a ready-to-use adaptable format. All policies within this book are designed to be adapted and tailored to the unique diversity and needs of each school as reflected by the context and the people that make up the school community. This book is relevant to every person who works in a school – worldwide. Users of this book can rest assured that each policy has been carefully formulated from the current understandings of best practice. This is a practical innovation and an example of how schools can use research evidence in their day-to-day practices. "The Open

Access version of this book, available at [www.taylorfrancis.com](http://www.taylorfrancis.com), has been made available under a Creative Commons Attribution-Non-Commercial-No Derivatives 4.0 license."

**Thought in the Act** U of Minnesota Press

There are, in simple terms, three principal kinds of capital that come necessarily into play when a society is evolving towards improving the lives, livelihoods, and qualities of life of its people. The first form of capital is financial – this normally includes physical forms of

invested money in plant, buildings, and infrastructure. The second form of capital is human – seen simply as the level and range of skills and capabilities that are available for use in the society. When people are literate, numerate, skilled, experienced, informed, cooperative, and inquisitive, they and their societies can do much more. The third form of capital is social. Here cooperativeness shows its effects, and the rules of how that works vary greatly between societies. It is the second of these

---

elements, human capital, that is the main focus of this book, but it overlaps with social capital extensively in these accounts and can only be understood in terms of its connections into the wider societal system. The varying patterns of its workings and influence in different Asian contexts are explained against the background of a theory of societal progress. This book was originally published as a special issue of the Asia Pacific Business Review.

*Planetary Economics*  
Routledge

Various theories have been put forward as to why business and industry develops in clusters and despite good work being carried out on path dependence and dynamics, this is still very much an

emerging topic in the social sciences. To date, no overarching theoretical framework has been developed to show how clusters evolve. Unfolding Cluster Evolution aims to address this gap by presenting theoretical and empirical research on the geography of innovation. This contributed volume seeks to shed light on the understanding of clusters and its dynamic evolution. The book provides evidence to suggest that traditional perspectives from

---

evolutionary economic geography need to be wedded to management thinking in order to reach this point. Bringing together thinking from a range of disciplines and countries across Europe, this book explores a wide range of topics from the capability approach, to network dynamics, to multinational corporations, to firm entry and exit and social capital. This book will be of interest to policy makers and students of urban studies, economic geography, and planning and development.

**Informal Workers and Collective Action** Routledge  
Social protection serves as an important development tool, helping to alleviate deprivation, reduce social risks, raise household income and develop human capital. This book brings together an interdisciplinary team of international experts to analyse social protection systems and welfare regimes across contemporary Latin America. The book starts with a section tracking the expansion of social assistance and social insurance in Latin America through the state-led

development era, the neoliberal era and the pink-tide. The second section explores the role played by local and external actors modelling social policy in the region. The third and final section addresses a variety of contemporary debates and challenges around social protection and welfare in the region, such as gender roles and the empowerment of CCT beneficiaries, and welfare provision for rural outsiders. The book touches on key topics such as conditional cash transfer programmes, trade union inclusionary strategies, transnational social policy, state-

---

led versus market-led welfare provision, explanatory factors in the emerging dualism of social protection institutions, social citizenship rights as a consequence of changing social policy architecture and different poverty reduction strategies. This interdisciplinary volume will be of interest to economists, political scientists, sociologists, anthropologists and historians working on social protection in Latin America, or interested in welfare systems in the global south.

Cultural Citizenship in Political Theory Taylor &

Francis  
Leading from the North aims to improve public dialogue around the future of Northern Australia to underpin robust and flexible planning and policy frameworks. A number of areas are addressed including social infrastructure, governance systems, economic, business and regional development, climate and its implications, the roles and trends in demography and migration in the region. This book not only speaks to the issues of development in Northern Australia but also other regional areas, and

examines opportunities for growth with changing economies and technologies. The authors of this book consist of leading researchers, academics and experts from Charles Darwin University, The Australian National University, James Cook University, the Australian Institute of Marine Science and many other collaborative partners. Many of the authors have first-hand experience of living and working in Northern Australia. They understand the real issues and challenges faced by people living in Northern Australia and other similar regional areas.

---

Backed by their expertise and experience, the authors present their discussions and findings from a local perspective.

**Human capital and the people side of progress** World Bank Publications

This book investigates how sustainability informs key principles and concepts of domestic and international law. It calls for the recognition of ecological sustainability as a fundamental principle to guide the entire legal system rather than just environmental legislation. To this end, the book makes a contribution to global environmental constitutionalism, a rapidly growing area within comparative and international

environmental law and constitutional law. This 2nd edition has been fully revised and updated to take account of recent developments and new case law. The book will be a valuable resource for students, researchers and policy makers working in the areas of environmental law and governance.

**Taking Sève Seriously** Cornell University Press

In addition to his groundbreaking contributions to pure economic theory, F. A. Hayek also closely examined the ways in which the knowledge of many individual market participants could culminate in an overall order of

economic activity. His attempts to come to terms with the “knowledge problem” thread through his career and comprise the writings collected in the fifteenth volume of the University of Chicago Press’s Collected Works of F. A. Hayek series. *The Market and Other Orders* brings together more than twenty works spanning almost forty years that consider this question. Consisting of speeches, essays, and lectures, including Hayek’s 1974 Nobel lecture, “The Pretense of Knowledge,” the works in this volume draw on a broad range of perspectives,

---

including the philosophy of science, the physiology of the brain, legal theory, and political philosophy. Taking readers from Hayek's early development of the idea of spontaneous order in economics through his integration of this insight into political theory and other disciplines, the book culminates with Hayek's integration of his work on these topics into an overarching social theory that accounts for spontaneous order in the variety of complex systems that Hayek studied throughout his career. Edited by renowned Hayek scholar Bruce Caldwell, who

also contributes a masterly introduction that provides biographical and historical context, *The Market and Other Orders* forms the definitive compilation of Hayek's work on spontaneous order.

*The Market and Other Orders*  
Routledge

Given the profound moral-ethical controversies regarding the use of new biotechnologies in medical research and treatment, such as embryonic research and cloning, this book sheds new light on the role of religious organizations and actors in influencing the bio-political debates and decision-making processes. Further, it analyzes the ways in which

religious traditions and actors formulate their bio-ethical positions and which rationales they use to validate their positions. The book offers a range of case studies on fourteen Western democracies, highlighting the bio-ethical and political debates over human stem cell research, therapeutic and reproductive cloning, and pre-implantation genetic diagnosis. The contributing authors illustrate the ways in which national political landscapes and actors from diverse and often fragmented moral communities with widely varying moral stances, premises and commitments formulate their bio-ethical positions and seek to influence political decisions.

Healthcare Reform:  
Breakthroughs in Research  
and Practice* Emerald Group  
Publishing

How well do our assumptions about the global challenges of energy, environment and economic development fit the facts? Energy prices have varied hugely between countries and over time, yet the share of national income spent on energy has remained surprisingly constant. The foundational theories of economic growth account

for only about half the growth observed in practice. Despite escalating warnings for more than two decades about the planetary risks of rising greenhouse gas emissions, most governments have seemed powerless to change course. Planetary Economics shows the surprising links between these seemingly unconnected facts. It argues that tackling the energy and environmental problems of the 21st Century requires three different domains of decision-making to be recognised and connected.

Each domain involves different theoretical foundations, draws on different areas of evidence, and implies different policies. The book shows that the transformation of energy systems involves all three domains - and each is equally important. From them flow three pillars of policy – three quite distinct kinds of actions that need to be taken, which rest on fundamentally different principles. Any pillar on its own will fail. Only by understanding all three, and fitting them

---

together, do we have any  
hope of changing course.  
And if we do, the oft-  
assumed conflict between  
economy and the  
environment dissolves – with  
potential for benefits to both.  
Planetary Economics charts  
how.
