This study assesses the future growth prospects of Rwanda. The report first focuses on broad economic growth using a rather aggregated 18-sector dynamic general equilibrium model to display the trade-off between rapid growth and structural change. The analysis shows that with the current investment pattern, rapid growth is possible but structural transformation is slow. With an overvalued exchange rate, growth in the tradable sector slows down and its share in the economy stays small. The importance of agriculture thus should be considered in the broad development strategy, for its role not only in poverty reduction but also in economic growth.

This book discusses issues such as global financial crisis and global governance, food security, energy sustainability, the

global financial system, trade and protectionism, and growth and employment. Since the outbreak of the financial as well as national debt crises in the Euro zone, the focus of the G20 has shifted back to addressing short-term issues. These issues range from the dynamic effects of global imbalances and the appropriate degree of financial sector regulation to questions of austerity versus growth and the lack of a comprehensive framework for managing the international monetary system. A further issue is the relevance of the G20 agenda for emerging market economies. Global economic recovery still remains fragile and downside risks to global growth remain. Additionally, much of the agenda of the Seoul Development Consensus for shared growth launched in 2010 has yet to be fulfilled. A key discussion point in the book, therefore, is how to make a tangible and significant difference in peoples' lives by implementing an agenda of inclusive growth.

Routledge Handbook of the Economics of European Integration provides readers with a brief but comprehensive overview of topics related to the process of European integration in the post-World War II period. Its short chapters reflect the most up-to-date and concise research, written by a collective of experts on their own subjects. The aim of this book is twofold. Firstly, the text illustrates the broad and diverse range of issues associated with European integration, and lastly, the key approaches and findings are summarised. Since institutional integration in Europe is an ongoing process, with possibly frequent and sometimes rapid changes, the chapters are intended to focus on the key features of the economic analyses of these topics. A wide and diverse set of economic issues is of direct relevance for European integration. These topics cover various fields, ranging from

the history of the European Economic and Monetary Union, EU Trade Policy and the stability of international trade, single market issues over fiscal, monetary and other policies, the crisis that faces the Euro area, and institutions such as EU Council of Ministers. Not surprisingly, many of these issues have also been analysed from a European perspective. This handbook is designed to provide students, researchers, the public and policy makers with ready and accessible knowledge of issues related to European integration and will provide the definitive overview of research in the area.

The author introduces the concept of economic woman and makes her visible in duality with and opposition to the exclusive model of economic man. Economic man has epitomized neo-liberal capitalism, which embraces competition and maximization of profit, resulting in a steep increase in economic inequality. The book demonstrates that women's inequality is a crucial factor in economic inequality, which cannot be fully understood without relating to women's situation, and that economic woman cannot thrive in the conditions of economic inequality created under global neo-liberalism. Emphasising the international human rights guarantees of women's right to equality in all fields of life, the author documents woman's increased participation in political, public, financial and corporate institutions, employment and entrepreneurship, with some women reaching high profile positions.

Nevertheless, using global data, she reveals that economic woman lags behind, with a severe economic power deficit, an unfulfilled promise of equal employment opportunity, a gendered impact of poverty and barriers to gender equality in the family. The book analyses the trap of women's increased burden of breadwinning in the context of discriminatory laws and practices, infrastructural failures and policy gaps, which preempt achievement of gender equality in economic life. The book is intended for the general reader, academics, students, policy makers and NGOs. It shows economic woman at a global crossroads between a universal paradigm of gender equality and pervasive barriers to equal economic opportunity. The author demonstrates that tackling gender inequality, restoring welfare priorities and reducing economic inequality are inextricably linked. Human rights and governments have a vital role to play in addressing them all, to create a sustainable economic

infrastructure for the lives of women and men.

Growth in the Asia-Pacific region shows signs of improving as extreme risks emanating from advanced economies have receded and domestic demand remains resilient, supported by relatively easy financial conditions and robust labor markets. A small and gradual pick-up in growth to over 53 / 4 percent is projected in the course of 2013. Risks to the outlook from within the region, such as rising financial imbalances and asset prices in some economies, are coming clearer into focus. Although Asia's banking and corporate sectors have solid buffers, monetary policymakers should stand ready to respond early and decisively to shifting risks, and macroprudential measures will also have a role to play. In many Asian economies, some fiscal consolidation could also rebuild the space needed to respond to future shocks and preempt potential overheating pressures from capital inflows. In particular, there is a growing need to make tax and spending policies more efficient. To sustain high growth rates and alleviate the "middle-income trap" across Emerging Asia, the policy agenda will vary by jurisdiction but will also often include strengthening infrastructure investment and reforming goods and labor markets.

The subject of food security and land issues in Africa has become one of increased importance and contention over recent years. In particular, the focus has shifted to the role new global South donors - especially India, China and Brazil - are playing in shaping African agriculture through their increased involvement and investment in the continent. Approaching the topic through the framework of South-South co-operation, this highly original volume presents a critical analysis of the ways in which Chinese, Indian and Brazilian engagements in African agriculture are structured and implemented. Do these investments have the potential to create new opportunities to improve local living standards, transfer new technology and knowhow to African producers, and reverse the persistent

productivity decline in African agriculture? Or will they simply aggravate the problem of food insecurity by accelerating the process of land alienation and displacement of local people from their land? Topical and comprehensive, Agricultural Development and Food Security in Africa offers fresh insight into a set of relationships that will shape both Africa and the world over the coming decades.

The SAGE Handbook of Globalization Springer  
We Are Better Than This fundamentally reframes budget debates in the United States. Author Edward D. Kleinbard explains how the public's preoccupation with tax policy alone has obscured any understanding of government's ability to complement the private sector through investment and insurance programs that enhance the general welfare and prosperity of our society at large. He argues that when we choose how government should spend and tax, we open a window into our "fiscal soul," because those choices are the means by which we express the values we cherish and the regard in which we hold our fellow citizens. Though these values are being diminished by short-sighted decisions to starve government, strategic government spending can directly make citizens happier, healthier, and even wealthier. Expertly combining the latest economic research with his insider knowledge of the budget process into a simple yet compelling narrative, he unmasks the tax mythologies and false arguments that too often dominate contemporary discourse about budget policies. Large quantities of comparative data are succinctly distilled to situate the United States among its peer countries, so that readers can judge for themselves whether contemporary budget choices really reflect our aspirational fiscal soul. Kleinbard's presentation takes a multi-disciplinary approach, drawing on economics, finance, law, political science and moral philosophy. He uniquely weaves economic research and moral philosophy together by emphasizing our welfare, not just our national income, and by contrasting the actual beliefs of Adam Smith, a great moral philosopher, with the

cartoon version of the man presented by proponents of the most extreme forms of private market triumphalism.

In this anthology, editors Kym Anderson and Vicente Pinilla have gathered together some of the world's leading wine economists and economic historians to examine the development of national wine industries before and during the two waves of globalization. The empirically-based chapters analyse developments in all key wine-producing and consuming countries using a common methodology to explain long-term trends and cycles in wine production, consumption, and trade. The authors cover topics such as the role of new technologies, policies, institutions, as well as exchange rate movements, international market developments, evolutions in grape varieties, and wine quality changes. The final chapter draws on an economic model of global wine markets, to project those

markets to 2025 based on various assumptions about population and income growth, real exchange rates, and other factors. All authors of the book contributed to a unique global database of annual data back to the mid-nineteenth century which has been compiled by the book editors.

This paper examines the macroeconomic interaction between informality and gender inequality in the labor market. A dynamic stochastic general equilibrium model is built to study the impact of gender-targeted policies on female labor force participation, female formal employment, gender wage gap, as well as on aggregate economic outcomes. The model is estimated using Bayesian techniques and Indian data. Although these policies are found to increase female labor force participation and output, lack of sufficient formal job creation due to labor market rigidities leads to an increase in unemployment and informality, and further widens gender gaps in formal employment and wages. Simultaneously implementing such policies with formal job creating policies helps remove these adverse impacts while also leading to significantly larger gains in output.

This volume is a tribute to Professor Hal Hill, one of the most distinguished and internationally renowned Australian development economists and the single most important Australian figure in the networks that bind the Australian and Southeast Asian economics professions over the past four decades. The volume contains twelve original contributions by distinguished scholars who are at the forefront of their own subject areas. The contributions are thematically arranged into three parts to reflect Professor Hill's wide-ranging research interests: trade policy issues central to the development policy debate, structural change and global economic

integration in East Asian economies, and the political economy of development policy.

Reconceptualising the Rule of Law in Global Governance, Resources, Investment and Trade World Scientific

Macroprudential policy is perhaps the most important new development in central bank policymaking circles since the global financial crisis, and reliance on such policies has continued to spread. The crisis, which showed the limits of conventional monetary policy as a tool to deal with financial stability, forced a wide-ranging rethink of economic policies, their interactions and their repercussions. It has led to new forms of intervention, of regulation and of supervisory practice. Macroprudential regulation is now one of the most important topics in modern macroeconomics, because it concerns measures put in place to reduce the risks and costs of the instability caused by financial crises. Written by senior figures from the worlds of academia and banking, this volume combines theoretical approaches with hard evidence of the policy's achievements in many countries. It is the first in-depth analysis of macroprudential instruments for policymakers, banks and economists.

The relevance and importance of the rule of law to the international legal order cannot be doubted and was recently reaffirmed by the Declaration of the High-level Meeting of the General Assembly on the Rule of Law at the National and International Level's solemn commitment to it on behalf of states and international organizations. In this edited collection, leading scholars and practitioners from the fields of global governance, resources, investment and trade examine how the commitment to the rule of law manifests itself in the respective fields. The book looks at cutting-edge

issues within each field and examines the questions arising from the interplay between them. With a clear three-part structure, it explores each area in detail and addresses contemporary challenges while trying to assure a commitment to the rule of law. The contributions also consider how the rule of law has been or should be reconceptualised. Taking a multi-disciplinary approach, the book will appeal to international lawyers from across the spectrum, including practitioners in the field of international investment and trade law.
