Since the Middle Ages, literature has portrayed the economic world in poetry, drama, stories and novels. The complexity of human realities highlights crucial aspects of the economy. The nexus linking characters to their economic environment is central in a new genre, the "economic novel", that puts forth economic choices and events to narrate social behavior, individual desires, and even non-economic decisions. For many authors, literary narration also offers a means to express critical viewpoints about economic development, for example in regards to its ecological or social ramifications. Conflicts of economic interest have social, political and moral causes and consequences. This book shows how economic and literary texts deal with similar subjects, and explores the ways in which economic ideas and metaphors shape literary texts, focusing on the analogies between economic theories and narrative structure in literature and drama. This volume also suggests that connecting literature and economics can help us find a common language to voice new, critical perspectives on crises and social change. Written by an impressive array of experts in their fields, *Economics and Literature* is an important read for those who study history of economic thought, economic theory and philosophy, as well as literary and critical theory.

Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's *Microeconomics* bridges the gap between today's theory and practice, with a strong empirical dimension that lets students tests theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.
