Over the past two decades, experimental economics has moved from a fringe activity to become a standard tool for empirical research. With experimental economics now regarded as part of the basic toolkit for applied economics, this book demonstrates how controlled experiments can be a useful in providing evidence

---

relevant to economic research. Professors Jacquemet and L'Haridon take the standard model in applied econometrics as a basis to the methodology of controlled experiments.

Methodological discussions are illustrated with standard experimental results. This book provides future experimental practitioners with the means to construct experiments that fit their research question, and new comers with an understanding of the strengths and weaknesses of controlled experiments. Graduate students and academic researchers working in the field of experimental economics will be able to learn how to undertake, understand and criticise empirical research based on lab experiments, and refer to specific experiments, results or designs completed with case study applications.

The European payment market has undergone rapid transformation in recent years due to changes in payment habits, new business rules and new legal frameworks and regulation. There has also been an advent of new technologies and payment solutions which has altered the European payments landscape drastically. This book provides an overview of the fundamental issues involved in this new payments landscape.

The authors discuss fundamental problems such as substitution between cash and non-cash payment instruments, payment costs, the economics of fees, and the demand for cash and deposit money. They also analyse issues such as two-sided markets, business platforms and the problem of critical mass. Other chapters focus on new phenomena in payments such as mobile payments, multi-sided

platforms, electronic wallets, virtual currencies, decentralised ledgers, private digital currencies, blockchain and instant payments. The authors also review existing regulation for the topic including the revised Payment Services Directive (PSD2), Interchange Fee Regulation (IF/MIF Reg), and the Single Euro Payments Area (SEPA) project. Transforming Payment Systems in Europe offers insight into changing payment culture and the ways in which new payment systems can create a single digital market to foster further integration in Europe.

Recently, students and scholars have expressed dissatisfaction with the current state of economics and have called for the reintroduction

of historical perspectives into economic thinking. Supporting the idea that fruitful lessons can be drawn from the work of past economists, this volume brings together an international cross section of leading economists and historians of economic thought to reflect on the crucial role that money, crises and finance play in the economy. The book draws on the work of economists throughout history to consider afresh themes such as financial and real explanations of economic crises,

---

the role of central banks, and the design of macroeconomic policies. These themes are all central to the work of Maria Cristina Marcuzzo, and the contributions both reflect on and further her research agenda. This book will be of interest to researchers in the history of economic thought, and those who wish to gain a deeper understanding of the variety and diversity in approaches to economic ideas throughout history. 2008, Richard Thaler and Cass Sunstein's *Nudge: Improving Decisions about Health, Wealth, and Happiness* quickly became one of the most influential books in modern economics and politics. Within a short time, it had inspired whole government departments in the US and UK, and others as far afield as Singapore. One of the keys to *Nudge's* success is Thaler and Sunstein's ability to create a detailed and persuasive case for their take on economic decision-making. *Nudge* is not a book packed with original findings or data; instead it is a careful and systematic synthesis of decades of research into behavioral economics. The discipline challenges much conventional economic thought – which works on the basis that, overall, humans make rational decisions – by focusing instead on the 'irrational' cognitive biases that affect our decision making. These seemingly in-built biases mean that certain kinds of economic decision-making are predictably irrational. Thaler and Sunstein prove themselves experts at creating persuasive arguments and dealing effectively with counter-arguments. They conclude that if governments understand these cognitive biases, they can 'nudge' us into making better decisions for ourselves. Entertaining as well as smart, *Nudge* shows the full range of reasoning skills that go

---

into making a persuasive argument.

Insurance Economics

brings together the economic analysis of decision making under risk, risk management and demand for insurance among individuals and corporations, objectives pursued and management tools used by insurance companies, the regulation of insurance, and the division of labor between private and social insurance. Appropriate both for advanced undergraduate and

graduate students of economics, management, and finance, this text provides the background required to understand current research.

Predictions derived from theoretical arguments are not merely stated, but also related to empirical evidence. Throughout the book, conclusions summarize key results, helping readers to check their knowledge and comprehension. Issues discussed include paradoxes in decision making under risk and attempts at their resolution, moral hazard and adverse selection including the possibility of a "death spiral", and future challenges to both private and social insurance such as globalization and the availability of genetic information. This second edition has been extensively

---

revised. Most importantly, substantial content has been added to represent the evolution of risk-related research. A new chapter, Insurance Demand II: Nontraditional Approaches, provides a timely addition in view of recent developments in risk theory and insurance. Previous discussions of Enterprise Risk Management, long-term care insurance, adverse selection, and moral hazard have all been updated. In an effort to expand the global reach of the text, evidence and research from the U.S. and China have also been added.

the phenomena it seeks to people as cogs, measure, understand, and economics is creating its shape. In *Cogs and Monsters*, Diane Coyle explores the enormous problems—but also opportunities—facing economics today if it is to respond effectively to these dizzying changes and help policymakers solve the world’s crises, from pandemic recovery and inequality to slow growth and the climate emergency. Mainstream economics, Coyle says, still assumes people are “cogs”—self-interested, calculating, independent agents interacting in defined contexts. But the digital economy is much more characterized by “monsters”—untethered, snowballing, and socially influenced unknowns. What is worse, by treating the rewiring of society,

own monsters, leaving itself without the tools to understand the new problems it faces. In response, Coyle asks whether economic individualism is still valid in the digital economy, whether we need to measure growth and progress in new ways, and whether economics can ever be objective, since it influences what it analyzes. Just as important, the discipline needs to correct its striking lack of diversity and inclusion if it is to be able to offer new solutions to new problems. Filled with original insights, *Cogs and Monsters* offers a road map for how economics can adapt to
