Global Political Economy Cambridge University Press
Social entrepreneurship is one of the most controversial actualities of the modern economy. On the one hand, social entrepreneurship makes up for "market failures" and prevents the deficit of socially essential goods and services in the marketplace, acting as their supplier. On the other hand, the survival of social entrepreneurship in an aggressive market environment is a challenging task, the fulfilment of which may distort the original essence of social entrepreneurship. Comprising a collection of research presented at the International Scientific Conference Advanced Issues on Social Entrepreneurship, this contributed volume offers a global economic analysis of social entrepreneurship. Whilst social entrepreneurship is indispensable to the modern economy, the current controversial model of its organization means it cannot fully accomplish its mission. This book offers potential solutions to this problem with the global and national strategies of economic growth and social progress. It includes a focus on emerging markets, in which the role of social entrepreneurship is especially high. This book is aimed at scholars and students

who are interested in social entrepreneurship and corporate economics, and practitioners involved in this field. It will also be of interest to policy makers in the development and implementation of a national economic policy for support for social entrepreneurship in emerging markets.

Shortlisted for the 2012 Prix Vogel in Economic Law. Public procurement and competition law are both important fields of EU law and policy, intimately intertwined in the creation of the internal market. Hitherto their close connection has been noted, but not closely examined. This new work is the most comprehensive attempt to date to explain the many ways in which these fields, often considered independent of one another, interact and overlap in the creation of the internal market. In this process of convergence between competition and public procurement law, the need for this joint study is clearly apparent. As such the book asks whether competition law principles inform or condition public procurement rules, and whether they are adequate to ensure that competition is not distorted in markets where public procurement is particularly significant. The book moves away from the

classical focus of public procurement on the activities of private actors, developing instead an analytical framework for the appraisal of the market behaviour of the public buyer from a competition perspective. The analysis is both legal and economic. Proceeding through a careful assessment of the general rules of competition and public procurement, the book constantly tests the efficacy of the rules in competition and public procurement against a standard of the proper functioning of undistorted competition in the market for public procurement.

Japanese companies are household names throughout the world, and the economy vies with America as the greatest in the world. But how much do we really know about the forces that have made this possible? This book is based on the premise that it is vital to know something about Japanese life in order to study the economic, political and social aspects of its economic development. The book traces the roots of the Japanese post-war miracle, looking behind the international influence of Japanese business to the millions of ordinary workers in factories, in workshops, and on farms, who have made it possible. How have their lives changed over the hundred years of industrialization? Is the Japanese work ethic uniquely equipped for such a challenge, or could the Japanese example be extended to today's Third World? This book mixes detailed case study material with description and analysis of Japanese economic and social history, and it presents a comparative survey of the development experience in the rest of the world.
