It's a plankton eat plankton - Ask a Biologist
FOOD CHAINS, FOOD WEBS AND ECOLOGICAL PYRAMIDS SECTION 1 In an ecosystem, plants capture the sun's energy and use it to convert inorganic compounds into energy-rich organic compounds. This process of using the sun's energy to convert minerals (such as magnesium or nitrogen) in the soil into green leaves, or carrots, or strawberries, is called

Ecosystem Ecosystems & Interactions
There are many food chains present in an ecosystem. Animals and plants can be a part of more than one food chain. When you put all the food chains together, they create a food web. A food web is a system of interlocking and interdependent food chains. (Dictionary Definition) Example: sun creates the tree, which is eaten by a mouse.
