In *Beyond Mothering Earth*, Sherilyn MacGregor argues that celebrations of "earthcare" as women's unique contribution to the search for sustainability often neglect to consider the importance of politics and citizenship in women's lives. Drawing on

interviews with women who juggle private caring with civic engagement in quality-of-life concerns, she proposes an alternative: a project of feminist ecological citizenship that affirms the practice of citizenship as an intrinsically valuable activity while allowing foundational aspects of caring labour and natural processes to flourish. *Beyond Mothering Earth* provides an original and empirically grounded understanding of women's involvement in quality-of-life activism and an analysis of citizenship that makes an important contribution to contemporary discussions of green politics, globalization, neoliberalism, and democratic justice.

As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science

major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

McGraw-Hill's SAT Subject Test Biology E/M, 3rd Edition Holt McDougal
Cancer and chronic disease are a rapidly increasing global health burden: according to the Milken Institute, the annual cost to the national US economy of the seven most common chronic conditions will rise to \$4.2 trillion by 2023. The data are just as dramatic in Canada, Europe, Australia, and increasingly, in countries in the developing world. As communities, governments, and health organizations worldwide struggle to avoid being swamped by health care costs – not to mention the impact of suffering and poor quality of life – the only long-term, sustainable hope must be based on prevention efforts. This book presents a promising new approach to educating, engaging, empowering, and generating action within communities as part of that broader prevention agenda. The authors review representative global experiences with community based prevention educators, focusing on the prevention coordination work that can be accomplished within geographical areas ranging from local communities to broader regions. Among the findings they reveal in this book are the fundamental elements of successful Community Based Prevention programs – skilled staff, high-quality evaluation, and sustained investment in prevention efforts. Ecology of Fire-Dependent Ecosystems is brimming with intriguing ecological stories of how life has evolved with and diversified within the varied fire regimes that are experienced on earth. Moreover, the book places itself as a communication between students, fire scientists, and fire fighters, and each of these groups will find some familiar ground, and some challenging aspects in this text: something which ultimately will help to bring us closer

together and enrich our different approaches to understanding and managing our changing planet. -- Sally Archibald, Professor, University of the Witwatersrand, Johannesburg, South Africa Most textbooks are as dry as kindling and about as much fun to sink your teeth into. This is not that kind of textbook. Devan Allen McGranahan and Carissa L. Wonkka have taken a complex topic and somehow managed to synthesize it into a comprehensive, yet digestible form. This is a book you can read cover to cover – I know, I did it. As a result, I took an enlightening journey through the history and fundamentals of fire and its role in the natural and human world, ending with a thoughtful review of the evolving relationship between humans and wildland fire. -- Chris Helzer, Nebraska Director of Science, The Nature Conservancy, and author of The Prairie Ecologist blog Ecology of Fire-Dependent Ecosystems: Wildland Fire Science, Policy, and Management is intended for use in upper-level courses in fire ecology and wildland fire management and as a reference for researchers, managers, and other professionals involved with wildland

fire science, practice, and policy. The book helps guide students and scientists to design and conduct robust wildland fire research projects and critically interpret and apply fire science in any management, education, or policy situation. It emphasizes variability in wildland fire as an ecological regime and provides tools for students, researchers, and managers to assess and connect fire environment and fire behaviour to fire effects. Fire has not only shaped social and ecological communities but pushed ecosystems beyond previous boundaries, yet understanding the nature and effects of fire as an ecological disturbance has been slow, hampered by the complexity of the dynamic interactions between vegetation and climate and the fear of the destruction fire can bring. This book will help those who study, manage, and use wildland fire to develop new answers and novel solutions, based on an understanding of how fire functions in natural and social environments. It reviews literature, synthesizes concepts, and identifies research gaps and policy needs. The text also explores the interaction of fire and human culture, demonstrating how fire policy can be made adaptable to cultural

and socio-ecological objectives. Concepts and Challenges in Science New York Proficiency Review Book Routledge Invasive species are among the greatest challenges to environmental sustainability and agricultural productivity in the world. One of the most promising approaches to managing invasive species is voluntary citizen stewardship. However, in order for control measures to be effective, private citizens often need to make sustained and sometimes burdensome commitments. Community-Based Control of Invasive Species is based on five years of research by leading scholars in natural resource and human behavioural sciences, which involved government and citizen groups in Australia and the United States. It examines questions including, 'how can citizens be engaged in voluntarily managing invasive species?', 'what communication strategies will ensure good motivation and coordination?' and 'how can governing bodies support citizens in their efforts?'. With chapters on institutional frameworks, changing governance, systems thinking, organisational learning, engagement, communication and behavioural change, this book will be a valuable reference for researchers and practitioners involved in natural resources management. Resources in Education Simon and Schuster In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are

intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Do you wish you could leverage the Common Core State Standards (ccss) to equip all students--not just high achievers--with the higher-level thinking skills they need? You can, and this book will show you how. The authors helped lead their district--Rockville Centre in Long Island, New York--in closing achievement gaps and increasing the number of students who completed four-year college programs.

The results of their efforts show a remarkable increase in both excellence and equity in English language arts, math, and science. This book outlines the authors' research-based acs framework for instructional improvement to help achieve similar results: (1) Acceleration rather than remediation; (2) Critical thinking; (3) Equity in education for all students; and (4) Support. Educators will find practical strategies that are applied and developed in model lessons linked to the ccss and ksus (Knowledge and Skills for University Success) standards. Understanding why we need to prepare all children to be college and career ready is easy. Making it happen is not. Learn from those who have succeeded, and your students will reap the rewards.

Negotiating Ecology McGraw Hill Professional Oceanography and Marine Biology: An Annual Review remains one of the most cited sources in marine science and oceanography. The ever increasing interest in work in oceanography and marine biology and its relevance to global environmental issues, especially global climate change and its impacts, creates a demand for authoritative reviews summarizing the results of recent

research. This volume covers topics that include resting cysts from coastal marine plankton, facilitation cascades in marine ecosystems, and the way that human activities are rapidly altering the sensory landscape and behaviour of marine animals. For more than 50 years, OMBAR has been an essential reference for research workers and students in all fields of marine science. From Volume 57 a new international Editorial Board ensures global relevance, with editors from the UK, Ireland, Canada, Australia and Singapore. pedagogic expertise of teachers of English Learners in US schools. Based on sociocultural and second language teaching and learning theories, the Observation Protocol for Academic Literacies (OPAL) has a variety of uses across teacher preparation programs, pre-K-12 classroom contexts and school districts. This book leads the reader through the process of using OPAL with real classroom observations in the form of vignettes, in order to develop confidence and reliability scoring evidence in research-based practices. The book provides examples of its non-evaluative uses to conduct research, support teachers and identify areas of strength and weakness in their professional development. It also offers researchers and policymakers a tool for collecting classroom-based evidence to inform the implementation and refinement of English Learner programs.

Degrowth is a rejection of the illusion of growth and a call to repoliticize the public debate colonized by the idiom of economism. It is a project advocating the democratically-led shrinking of production and consumption with the aim of achieving social justice and ecological sustainability.

This overview of degrowth offers a comprehensive coverage of the main topics and major challenges of degrowth in a succinct, simple and accessible manner. In addition, it offers a set of keywords useful for intervening in current political debates and for bringing about concrete degrowth-inspired proposals at different levels - local, national and global. The result is the most comprehensive coverage of the topic of degrowth in English and serves as the definitive international reference. More information at: vocabulary.degrowth.org
