In Assessment and Intervention for Executive Function Difficulties, McCloskey, Perkins, and Diviner provide a unique blend of theory, research, and practice that offers clinicians an overarching framework for the concept of executive functions (EFs) in educational settings. The conceptual model of executive functions is detailed, including their role in behavior, learning, and production across all settings. The heart of the book focus on the practical issues involved in the use of assessment tools, tests, report writing, and the implementation and follow-up of targeted interventions using the EF model. Six case studies are introduced in Chapter 1 and followed throughout the book, building understanding of the executive function difficulties of each child, assessment for identifying

the difficulties, and interventions for dealing with the difficulties. An additional case study is discussed in detail in one of the concluding chapters, and downloadable resources will provide the practitioner with a wealth of assessment forms, parent and teacher handouts, behavior tracking charts, and report/documentation forms.

Suicide kills and maims victims; traumatizes loved ones; preoccupies clinicians; and costs health care and emergency agencies fortunes. It should therefore demand a wealth of theoretical, scientific, and fiduciary attention. But in many ways it has Why? Although the answer to this question is multi-faceted, this volume not. supposes that one answer to the question is a lack of elaborated and penetrating theoretical approaches. The authors of this volume were challenged to apply their considerable theoretical wherewithal to this state of affairs. They have risen to this challenge admirably, in that several ambitious ideas are presented and developed. If ever a phenomenon should inspire humility, it is suicide, and the volume's authors realize this. Although several far-reaching views are proposed, they are pitched as first approximations, with the primary goal of stimulating still more conceptual and empirical work. A pressing issue in suicide science is the topic of clinical interventions, and clinical approaches more generally. Here too, this volume contributes, covering such topics as therapeutics and prevention, comorbidity, special populations, and clinical risk factors.

Helping Children Learn

Penguin

Anxiety disorders are among the most prevalent mental health problems in childhood and adolescence. This fully revised new edition is an authoritative guide to the

understanding and assessment of anxiety disorders in the young. The first section covers historical and conceptual issues, including cognitive and developmental processes, clinical and theoretical models, phenomenology and classification, and evidence-based assessment. Subsequent sections cover the biology of child and adolescent anxiety, and environmental influences including traumatic events, parenting and the impact of the peer group. The final section addresses prevention and treatment of anxiety. All chapters incorporate new advances in the field, explicitly differentiate between children and adolescents, and incorporate a developmental perspective. Written and edited by an international team of leading experts in the field, this is a key text for researchers, practitioners, students and clinical trainees with interests in child and adolescent anxiety.

The Handbook of Executive Functioning cuts through the confusion, analyzing both the whole and its parts in comprehensive, practical detail for scholar and clinician alike. Background chapters examine influential models of EF, tour the brain geography of the executive system and pose salient developmental questions. A section on practical implications relates early deficits in executive functioning to ADD and other disorders in children and considers autism and later-life dementias from an EF standpoint. Further chapters weigh the merits of widely used instruments for assessing executive functioning and review interventions for its enhancement, with special emphasis on children and adolescents.  The comprehensive coverage in this hugely important and timely handbook makes it

invaluable to clinical child, school, and counseling psychologists; clinical social workers; and child psychiatrists. As a textbook for advanced clinical and counseling psychology programs, and a solid reference for the researcher in child/adolescent mental health, its emphasis on flexibility and attention to emerging issues will help readers meet ongoing challenges, as well as advance the field. Its relevance cannot be overstated, as growing numbers of young people have mental health problems requiring intervention, and current policy initiatives identify evidence-based therapies as the most effective and relevant forms of treatment.

The Barkley Deficits in Executive Functioning Scale (BDEFS) is an empirically based tool for evaluating dimensions of adult executive functioning in daily life. Evidence indicates that the BDEFS is far more predictive of impairments in major life activities than more time-consuming and costly traditional EF tests. The BDEFS offers an ecologically valid snapshot of the capacities involved in time management, organization and problem solving, self-restraint, self-motivation, and self-regulation of emotions. It comprises both self- and other-reports in a long form (15-20 minutes) and a short form (4-5 minutes). Special features include an adult ADHD risk index in the long form. Complete instructions for scoring and

interpreting the scale are provided. See also the Barkley Deficits in Executive Functioning Scale--Children and Adolescents (BDEFS-CA) and Barkley's authoritative book on EF development and deficits, Executive Functions. Also available: Barkley Adult ADHD Rating Scale--IV (BAARS-IV) and Barkley Functional Impairment Scale (BFIS for Adults). Includes Permission to Photocopy Enhancing the convenience and value of the BDEFS, the limited photocopy license allows purchasers to reproduce the forms and score sheets and yields considerable cost savings over other available scales. The large format and sturdy wire binding facilitate photocopying.

Understanding Psychopathy is an essential, accessible new guide on psychopathy and its development. Through the lens of the biopsychosocial model, Thomson explores a wide range of factors contributing to the development of psychopathy, from the genetic to the environmental, supported by the latest research into the disorder. Thomson examines psychopathy from all angles, analysing social, psychological and biological factors, in addition to the history and assessment of psychopathy, and links to violent crime. Theory and research are supported throughout with fascinating case studies. These case studies provide accessible and relevant examples for readers who are new to the

field, and to those more familiar with psychopathy and its implications. Understanding Psychopathy is a brilliant resource for psychology students, researchers and practitioners in the criminal justice system alike, with grounding in forensic psychology, clinical psychology and criminology. The author is donating his royalties in full to Project EMPOWER, UK, a multidisciplinary initiative dedicated to enhancing prevention and intervention services to individuals and their families who experience intimate partner violence, sexual violence, domestic violence, or human trafficking.

Professional Wrestling and the Commercial Stage

CarTech Inc
This comprehensive handbook synthesizes the rapidly growing research base on child and adolescent psychopathy: its nature, causes, development, assessment, and treatment. The editors and contributors are leading authorities who review state-of-the-art empirical findings and weigh in on pressing questions, such as how the disorder should be conceptualized in youth and how to evaluate it in clinical and forensic contexts. Available assessment instruments and intervention approaches are critically examined. Etiological theories are presented that shed light on a range of potential causal mechanisms, including genetics, brain functioning, temperament, family processes, and other factors.

Professional Wrestling and the Commercial Stage examines professional wrestling as a century-old, theatrical form that spans from its local places of performance to circulate as a popular, global product. Professional wrestling has all the trappings of sport, but is, at its core, a theatrical event. This book acknowledges that professional wrestling shares many theatrical elements such as plot, character, scenic design, props, and spectacle. By assessing professional wrestling as a neglected but prototypical case study in the global business of theatre, Laine argues that it is an exemplary form of globalizing, commercial theatre. He asks what theatre scholars might learn from pro wrestling and how pro wrestling might contribute to conversations beyond the ring, by considering the laboring bodies of the wrestlers, and analyzing wrestling's form and content. Of interest to scholars and students of theatre and performance, cultural studies, and sports studies, Professional Wrestling and the Commercial Stage delimits the edges of wrestling's theatrical frame, critiques established understandings of corporate theatre, and offers key

wrestling concepts as models for future study in other fields.

Individual Differences in the Biobehavioral Etiology of Drug Abuse Cambridge University Press

Cancer is a very rare disease in children. There have been impressive gains in survival in recent years, and these have been achieved through the use of chemotherapy and national and international clinical trials. The diagnosis of cancer in a child imposes considerable stress on the whole family. In the immediate time after diagnosis, parents must learn about the disease and its treatment, explain what is happening to the child, and make arrangements for the care of other children in the family. For the child, treatment is associated with many side effects depending on the specific drugs used. In addition, the child is prone to infection and therefore is likely to miss a lot of school and other activities. For all these reasons, physicians and families have become aware that cancer has huge implications for the quality of the child's life. This book is an attempt to describe how quality of life is affected at different stages of the disease process.

Comprehensive reviews are provided of the impact on the child's physical activity, social life, and school and educational achievements.

Special consideration is given to children with leukemia (one of the more common cancers) and brain tumors. Cancer does not just affect the child but every member of the family.

Consequently there is coverage of the effects on parents and also healthy brothers and sisters. To the extent that improvements in survival have been achieved by national and international collaboration between clinicians, it is concluded that efforts to improve the quality of these children's lives is dependent on collaboration between clinicians, nurses, and behavioral scientists at national and international levels. This book should provide an impetus for such collaboration.

This monograph provides the first in-depth look at how mothers and young children talk about gender, to discover the potential role of language in fostering gender stereotypes. Mothers and their sons/daughters, who were 2-?, 4-?, or 6-? years of age, were videotaped discussing a picture book that focused on gender. A consistent contrast was found between mothers' explicit endorsement of gender stereotypes and implicit emphasis on gender. Although mothers rarely expressed gender stereotypes directly, they emphasized gender concepts

indirectly, by referring to gender categories, providing gender labels, contrasting males and females, and giving approval to their children's stereotyped statements. With increasing age, children were more focused on gender categories and stereotypes, but also more gender-egalitarian. Gender-egalitarian items (e.g., a female firefighter) were associated with less overt stereotyping, but also with more implicit talk about gender. Altogether, mothers' language input conveys a wealth of subtle messages about gender from which children may construct their own beliefs.
