The routine jobs of
yesterday are being
replaced by

technology and/or
shipped off-shore. In
their place, job
categories that require
knowledge
management, abstract
reasoning, and
personal services seem
to be growing. The
modern workplace
requires workers to
have broad cognitive
and affective skills.

Often referred to as
"21st century skills,"
these skills include
being able to solve
complex problems, to
think critically about
tasks, to effectively
communicate with
people from a variety
of different cultures
and using a variety of
different techniques, to
work in collaboration

with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science

education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled

assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below:

Cognitive skills: nonroutine problem solving, critical thinking, systems thinking

Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity

Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

Education

As a five-
year-old,
George

Alagiah
emigrated
with his
family to
Ghana - the
first African
country to
attain
independence
from the
British
Empire. A
PASSAGE TO
AFRICA is
Alagiah's
shattering
catalogue of
atrocities
crafted into
a portrait of
Africa that
is infused
with hope,
insight and
outrage. In
vivid and
evocative
prose and
with a fine
eye for

detail
Alagiah's
viewpoint is
spiked with
the freshness
of the young
George on his
arrival in
Ghana, the
wonder with
which he
recounts his
first
impressions
of Africa and
the affection
with which he
dresses his
stories of
his early
family life.
A sense of
possibility
lingers, even
though the
book is full
of
uncomfortable
truths. It is
a book neatly

balanced on his integrity and sense of obligation in his role as a writer and reporter. The shock of recognition is always there, but it is the personal element that gives A PASSAGE TO AFRICA its originality. Africa becomes not only a group of nations or a vast continent, but an epic of individual pride and suffering. GCSE
