Aracoeli (1982) was the last novel written by Elsa Morante (1912-85), one of the most significant Italian writers of the twentieth century. The journey, both geographical and memorial, of a homosexual son in search of his dead mother is a first-person narrative that has puzzled many critics for its darkness and despair. By combining scholars from different disciplines and cultural traditions, this volume re-evaluates the esthetical and theoretical complexity of Morante's novel and argues that it engages with crucial philosophical

and epistemological questions in an original and profound way. Contributors explore the manifold tensions staged by the novel in connection with contemporary philosophical discourse (from feminist/queer to political theory to psycho-analysis) and authors (such as Emilio Gadda, Pier Paolo Pasolini and Pedro Almodovar). The Power of Disturbance shows that by creating a 'hallucinatory' representation of the relationship between mother and child, Aracoeli questions the classical distinction between subject and object, and proposes an altogether new and subversive kind of writing.

It has long been assumed that new product innovations are typically developed by product manufacturers, an assumption that has inevitably had a major impact on innovation-related research and activities ranging from how firms organize their research and development to how governments measure innovation. In this synthesis of his seminal research, von Hippel challenges that basic assumption and demonstrates that innovation occurs in different places in different industries.

Presenting a series of studies showing that end-users, material suppliers, and others are the typical sources of innovation in some fields, von Hippel explores why this variation in the "functional" sources of innovation occurs and how it might be predicted. He also proposes and tests some implications of replacing a manufacturer-as-innovator assumption with a view of the innovation process as predictably distributed across users, manufacturers, and suppliers. Innovation, he argues, will take place where there is greatest economic benefit to the innovator.
