The 1970's witnessed widespread recognition of

the world as a single, interconnecting whole.

The 1980's have shown that this whole is not operating as a self-sustaining system. In short we appear to live in a world in crisis-manifesting itself in hunger, poverty, debt, conflict, statelessness and war, as well as in the accelerating degradation of the natural environment. The geographical perspectives of World in Crisis? - in this completely revised and updated edition - show the interlinking nature of global, regional, and local problems and, further, that these are not uniquely economic, ecological, political or social, but all these and more.

"Integrate Math III is the

final course in the three-estate exam prep program course Integrated Math series. With this course, students further explore quadratic functions and extend learning to polynomial functions. Students extend their understanding of arithmetic and geometric sequences to series, and their knowledge of trigonometric ratios to trigonometric functions. Additionally, students explore distributions of data, confidence intervals, and statistical significance." -- publisher **Calvert Math (Third Grade)** From one of America's most popular short story writers and an Academy Award nominee: the O. Henry Award-winning tale that inspired the movie *The Hunt*. A subject of mysterious rumors and superstition, the deserted Caribbean Island was

shrouded in an air of peril. To Sanger Rainsford, who fell off a yacht and washed up on its shores, the abandoned isle was a welcome paradise. But unknown to the big-game hunter, a predator lurked in its lush jungles—one more dangerous than any he had ever encountered: a human. First published in 1924, this suspenseful tale “has inspired serial killers, films and stirred controversy in schools. A century on, the story continues to thrill” (The Telegraph). “[A] tense, relentless story of man-against-man adventure, in which the hunter Sanger Rainsford learns, at the hands of General Zaroff, what it means to be hunted.”
