Annotation. "Among the remarkable features of the University of Minnesota are its combination of land grant mission and research focus, its urban and rural campuses, its substantial number of students, and the breadth of its programs, from agricultural extension to organ transplants. This history of the university describes the challenges, triumphs, and accomplishments of Minnesota's premier institution of higher learning during the past fifty years." "The story of the U is told here through recollection by celebrated alumni (including Garrison Keillor, Walter Mondale, and Eric Sevareid); interviews with students, faculty, and administrators such as former president Nils Hasselmo and current president Mark G. Yudof; and reports of campus life from the Minnesota Daily and other publications. Color photographs of all campuses, along with dozens of photographs depicting students life and faculty during these decades, complement the text."--BOOK JACKET. Holography exploded on the scientific world in 1964, but its slow fuse had been burning much longer. Over the next four decades, the echoes of that explosion reached scientists, engineers, artists and popular culture. Emerging from classified military research, holography evolved to represent the power of post-war physics, an aesthetic union of art and science, the countercultural meanderings of holism, a cottage industry for waves of would-be entrepreneurs and a fertile plot device for science fiction. New working cultures sprang up to mutate holography, redefining its products, reshaping its audiences and reconceiving its applications. The outcomes included ever more sublime holograms and exquisitely sensitive measuring techniques - but also priority disputes, prurience and poisonous business rivalries. New subjects cross intellectual borders, and so do their explanations. This book draws on the history and philosophy of science and technology, social studies, politics and cultural history to trace the trajectory of holography. The result is an in-depth account of how new science emerges. Based on unprecedented interviews with pioneer holographers and extensive archival research, it reveals how science, technology, art and wider culture are entwined in the modern world.
