What can we learn from

research findings? What are the risk factors for bullying or being bullied? How can we take account of the voice of the child? *Bullying among Prisoners*

Morgan James Publishing

The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension

---

"skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along:

students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

Bullying Online This book is a practical guide to dealing with bullying in secondary schools. The authors present what we know about bullying, describe the development issues for adolescence and discuss the social context of the school. They analyze key features of healthy and unhealthy schools, and set out a whole school approach to bullying and other social problems that arise in the secondary school. The authors show that by empowering the bystanders through providing effective teacher support, much of the bullying can be stopped at an early age and a healthy and safe school can be created. Their suggestions are based on student-centred responses and on programmes developed specifically to deal with bullying. This book is written especially for secondary school teachers, administrators and students, and the families and caregivers of the students. It is also for those who train teachers, for counsellors and

for educators at all levels.

**Bullying** Jessica Kingsley Publishers

This book aims to present key aspects of the prison-based bullying research which has taken place over the last few years. It is a field in which there has been considerably increased interest. One of the main features of this book is the recognition that much previous bullying research has been descriptive in nature, with little underlying theory to assist its development as an area of academic interest. In addressing this need this book will serve as an indispensable resource for students, academics and professionals with interests in this field. Chapters in the book address the following areas: need for innovation in prison bullying research, statistics on bullying, combining methods to research prison bullying, bullying behaviour among women in prison, bullying and suicides in prisons, developmental antecedents of

prison bullies and/or victims, applying evolutionary theory to prison bullying, applying social problem solving models to prison bullying.

Schools where Everyone Belongs Taylor & Francis  
Bullying is a serious problem for people with Asperger Syndrome (AS), both at school and in the workplace, and displaying 'different' behavior, such as not understanding social rules or hand-flapping, exacerbates the risk of being victimized. Writing in an accessible, informal style, the author describes the bullying behavior he and other individuals have experienced, and the effect this has had on their lives. He outlines the reasons for bullying behavior and the danger of persistent recurrence if it remains unchecked, as well as the critical importance of

---

'involving the bystander'. Nick Dubin goes on to provide a range of effective strategies to address bullies and bullying that can be applied by parents, professionals, schools, and individuals being bullied. He stresses the importance of peer intervention, empathetic teachers, and verbal self-defense, and shows how lack of support, condemning of 'tale telling,' or even blaming the victim reinforces bullying. This book offers individuals with AS who are being bullied the opportunity to see that they are not alone, and it is an invaluable source of advice for parents, teachers, professionals and personnel managers.

How to Stop Bullying and Social Aggression John Wiley & Sons

We've all seen bullies in action. Many of us have been the victims. Some of us have been the perpetrator. Thanks to all the attention being focused on bullies and the issues that surround them, most of us are getting the information we need. But if we're raising children in this culture of bullying or if we're part of the village that helps, we also need some effective and user-friendly tools to go up against the bully.

We need some very specific and action-oriented strategies to help every child feel welcomed and valued. And that's the reason why Bud Ramey and Bobby Kipper wrote **No BULLIES.**

Bullying Solutions Guilford Publications

Bullying has long been tolerated as a rite of passage among children and adolescents. There is

---

an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group

formation. In recent years, however, the physical setting is not the only place bullying is occurring.

Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication.

Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics

---

and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.
