"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk/>

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. Pulmonary rehabilitation programmes are a fundamental part of the clinical management of patients with chronic respiratory diseases. This comprehensive reference book places pulmonary rehabilitation within the wider framework of respiratory disease. Now in six parts, it includes new sections on the development of PR as a discipline, global perspectives on quality control, new chapters on early PR post exacerbation and personalized rehabilitation, innovative approaches to exercise, PR in interstitial lung disease and lung transplantation, and the latest research into the application of music, dance and yoga. Key Features Global contributions compare practice around the world where differences have developed. New six Part structure covers new approaches to exercise testing, interstitial lung diseases and other diseases, and add-on interventions drawing on new technologies. Contains recommendations of the large collaborative ERS/ATS task forces on guidelines for PR as well as suggested policies for its implementation and

use. Covers the important topic of balance impairment as a focus of rehabilitation for the at-risk patient and a new chapter on monitoring physical activity. The voices of patients and caregivers describe the impact of chronic respiratory disease on their lives. Features an exclusive chapter on COVID-19 that discusses the short- and long-term pathophysiological consequences, provides information about the potential role of physiotherapy in the management of hospitalized patients with confirmed or suspected COVID-19, and details on who, where, and how to deliver programs to COVID-19 and non COVID-19 patients in the lockdown and post lockdown era.

This book is intended primarily for the doctor who is confronted with an electro cardiogram and who wishes to make his own interpretation rather than to rely entirely upon the report of a specialist. The clinical use of the electrocardiogram is the sole concern here and no attempt is made to describe electrophysiology. It is hoped that by beginning with a description of the P wave and its abnormalities the reader will gain confidence and the desire to continue to subsequent sections as he realizes the simplicity of the approach. In a further attempt towards clarity and ease of reading, the text is liberally interspersed with line drawings, all originated by the author, and at the end of each section electro cardiograms are provided, illustrating the abnormalities which have been described. Interest in the electrocardiogram has now spread from the cardiologist to a wide variety of hospital staff, including medical students, house officers, intensive care and coronary care nurses, and anaesthetists. Many general practitioners now record their own electro cardiograms and most have outpatient access to the electrocardiography department of their local hospitals. This book will provide a useful basis for their reading of the electrocardiogram and I hope convince them that its interpretation is well within their capabilities.

NATIONAL BESTSELLER • NATIONAL BOOK CRITICS CIRCLE WINNER • With music pulsing on every page, this startling, exhilarating novel of self-destruction and redemption "features characters about whom you come to care deeply as you watch them doing things they shouldn't, acting gloriously, infuriatingly human" (The Chicago Tribune). Bennie is an aging former punk rocker and record executive. Sasha is the passionate, troubled young woman he employs. Here Jennifer Egan brilliantly reveals their pasts, along with the inner lives of a host of other characters whose paths intersect with theirs. "Pitch perfect.... Darkly, rippingly funny.... Egan possesses a satirist's eye and a romance novelist's heart." —The New York Times Book Review

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

The only respiratory care text devoted exclusively to patient assessment! By performing a thorough patient assessment, you'll be able to assist physicians in the decision-making process regarding treatment, in evaluating the treatment's effectiveness, and in determining if changes in the treatment need to be made. The book's comprehensive approach covers all of the most important aspects and topics of assessment. This edition is streamlined to

emphasize learning objectives. And you can prepare for the CRT exam more effectively with the new NBRC Exam Matrix Correlation Guide! A comprehensive approach covers all of the most important aspects of assessment, so you can assess patients effectively. Additional Questions to Ask About boxes list questions that you should ask patients (e.g., coughing, sputum, shortness of breath) or ask yourself (e.g., lung sounds you are hearing, blood pressure, respiratory rate). Learning objectives, chapter outlines, chapter overviews, and key terms lists begin each chapter, preparing you for the key topics and content you will learn. Key Point summaries and assessment questions reflect and emphasize the key information identified in the learning objectives. Answers to assessment questions help you review by including rationales and page references to the textbook, by reflecting the NBRC format, and by supporting learning objectives. Enhanced Simply Stated boxes emphasize important concepts. Additional case studies help you apply chapter content to clinical scenarios. Content from the text is related to the NBRC exam matrix for the CRT exam on a companion Evolve website, helping you better prepare for the difficult board exams. A new Neurological Assessment chapter focuses on conscious sedation. A discussion of health literacy addresses the importance of determining the patient's level of understanding when conducting a patient assessment. Discussions of the assessment of the obese patient prepare you for some of the unique challenges related to assessing obese patients (e.g., the physical exam and chest x-ray). Key Point summaries in every chapter emphasize the learning objectives and provide an easy-to-find overview. A list of abbreviations common to assessment is included on the inside of the cover for quick reference. Procedure checklists for common assessment procedures are included in a new appendix, with PDFs of the forms available on the Evolve website.

Excerpts of all 49 published Clinical Practice Guidelines provide you with important information regarding indications/contraindications, hazards and complications, assessment of need, and assessment of outcome and monitoring. Therapist Driven Protocols (TDPs) used by RTs in hospitals to assess patients, initiate care, and evaluate outcomes, are incorporated throughout the text to demonstrate the value of following an established protocol. Learning Objectives highlight key content at the beginning and at the end of each chapter in a bulleted section and parallel the three areas tested on the NBRC exam: recall, analysis, and application. Updated content aligned with the 2009 NBRC CRT Summary Content Outline ensures the text is both current and clinically accurate. Expanded use of the NBRC Exam Matrix Correlation Chart throughout all Evolve online resources makes test preparation easier.

A Visit from the Goon Squad Farrar, Straus and Giroux

This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for rehabilitation within the African context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches (scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology) to shed new insights into African-centred issues and strategies to optimise function post-stroke.
