Oxford University Press, USA A skills standard for budding scientists is an invaluable and practical hands-on guide for teaching students the vital skills needed at high school and early tertiary level for the successful completion of most tasks and assignments. It covers a

wide range of skills from effective essay and report writing, to working with and evaluating different kinds of information and data, effective summarising and note-taking, as well as the skills required for more practical tasks such as conducting surveys, presenting orals, creating project displays, and so on. This book aims to offer practical skills education, whilst encouraging the vital practice of critical

---

thinking, each step of the way. The book also aims to promote standardisation of skills within all schools and across all grades so that teachers and learners alike can start working from the 'same page'. Standardising skills helps eliminate the confusion arising out of conflicting skills instruction and helps learners know what should be presented in any task or assignment.

as well as questions that may arise on surgical rounds. Key figures and tables visually reinforce the important elements of the disease process. A brief algorithmic flow chart is provided so the reader can quickly understand the optimal management approach. Two additional special sections further strengthen the student's

comprehension. The first section covers areas of controversy in the diagnosis or management of each disease, and another section discusses pitfalls to avoid, where the inexperienced clinician might get in trouble. The text concludes with a series of multiple choice questions in a surgery shelf/USMLE format with robust

explanations.
