Endoscopy has had a major impact in the development of modern medicine and other medical specialties. The field of endoscopic procedure has developed over the last decade. By using different data it provided a better understanding of pathogenic mechanisms, described new entities and used for early detection, diagnostic procedures and therapeutic procedures. The advantages of many technical advances and modern endoscopic equipments, endoscopy has had a developed spectacularly. Consequently, endoscopy has surpassed its function as an examination tool and it became a rapid and efficient therapeutic tool of various organs including gastrointestinal tract, head and neck, respiratory tract and others. The efficacy and usefulness of endoscopy has yet been established.

This new book presents an abundance of important information and case studies that deal with bamboo farming and its effects from and on climate change adaptation and mitigation. There is a lack of research on the role of bamboo in climate change adaptation and mitigation; this volume helps to fill that gap by providing information that will enable policymakers to consider bamboo farming and its implications in carbon trading. Bamboo represents one of the world's highest yielding renewable natural resources and is an important source of non-timber forest products for subsistence use as well as for materials with many commercial and industrial uses. There are over 1500 documented applications of bamboo products, including materials for bridges, construction, furniture, agricultural tools, handicrafts, papers, textiles, boards, edible, and bioenergy applications. With their fast growth rate and rapid propagation, bamboo forests have a high C storage potential, especially when the harvested culms are transformed into durable products and thereby prolonging the C storage. Environmentalists love bamboo for its quick growth and for the fact that it can be harvested without harming the environment. This volume is a rich resource on the role of bamboo in ecological farming and climate change mitigation. Key features of the book include:

- Explores the role of bamboo on climate change and environment and ecosystem-based adaptation to climate change
- Considers overlooked bamboo biomass resources
- Explains carbon capture and storage potential in bamboo
- Assesses opportunities for carbon farming and carbon trading in bamboo
- Looks at the role on bamboo cultivation on the livelihood of rural populations
- Details the soil properties

needed for bamboo-based agroforestry systems

An accounting study guide with questions, and answers is a helpful tool for anyone that is taking an an accounting class. An accounting course book covers topics extensively. With the study guide the person can take the quizzes, and check their answers. The study guide shows which answer is correct. Some study guide books will explain why the other answers is close, but not correct. Once the person takes the quiz on a specific topic. They will find out where their weakness is, and what areas they have to study. The book will help them prepare for class exams, and any professional exams they may take.

The Chapman – Enskog Solution of the Transport Equation for Moderately Dense Gases Speedy Publishing LLC

The aim of this book is to present the concepts, methods and applications of kinetic theory to rarefied gas dynamics. After introducing the basic tools, problems in plane geometry are treated using approximation techniques (perturbation and numerical methods). These same techniques are later used to deal with two- and three-dimensional problems. The models include not only monatomic but also polyatomic gases, mixtures, chemical reactions. A special chapter is devoted to evaporation and condensation phenomena. Each section is accompanied by problems which are mainly intended to demonstrate the use of the material in the text and to outline additional subjects, results and equations. This will help ensure that the book can be used for a range of graduate courses in aerospace engineering or applied mathematics.

Dropping Acid: The Reflux Diet Cookbook & Cure is the first book to explain how acid reflux, particularly silent reflux, is related to dietary and lifestyle factors. It also explains how and why the reflux epidemic is related to the use of acid as a food preservative. Dr. Koufman defines the symptoms this shockingly common disease and explains why a change in diet can alleviate some of the most common symptoms. Dropping Acid offers a dietary cure for acid reflux, as well as lists of the best and worst foods for a reflux sufferer. The book 's recipes use tasty fats as flavorings, not as main ingredients; included are the recipes for tasty dishes that prove living with reflux doesn't mean living without delicious food.

This book is a complete introduction to the power of R for marketing research practitioners. The text describes statistical models from a conceptual point of

view with a minimal amount of mathematics, presuming only an introductory knowledge of statistics. Hands-on chapters accelerate the learning curve by asking readers to interact with R from the beginning. Core topics include the R language, basic statistics, linear modeling, and data visualization, which is presented throughout as an integral part of analysis. Later chapters cover more advanced topics yet are intended to be approachable for all analysts. These sections examine logistic regression, customer segmentation, hierarchical linear modeling, market basket analysis, structural equation modeling, and conjoint analysis in R. The text uniquely presents Bayesian models with a minimally complex approach, demonstrating and explaining Bayesian methods alongside traditional analyses for analysis of variance, linear models, and metric and choice-based conjoint analysis. With its emphasis on data visualization, model assessment, and development of statistical intuition, this book provides guidance for any analyst looking to develop or improve skills in R for marketing applications.

Kinetic Theory, Volume 3: The Chapman-Enskog Solution of the Transport Equation for Moderately Dense Gases describes the Chapman-Enskog solution of the transport equation for moderately dense gases. Topics covered range from the propagation of sound in monatomic gases to the kinetic theory of simple and composite monatomic gases and generalizations of the theory to higher densities. The application of kinetic theory to the determination of intermolecular forces is also discussed. This volume is divided into two sections and begins with an introduction to the work of Hilbert, Chapman, and Enskog that led to the formulation of the Chapman-Enskog theory. The Chapman-Enskog results are then compared with those of earlier theories with respect to viscosity, heat conduction, diffusion, and thermal diffusion. Subsequent chapters focus on alternatives to the Chapman-Enskog method and some mathematical problems; foundations of the kinetic theory of gases; and kinetic theory of processes in dilute gases and of heat conduction, viscosity, and self-diffusion in compressed gases and liquids. This book should be of interest to graduate students and others undertaking research in kinetic theory.
