Dr Alan J Hoffman is a pioneer in linear programming, combinatorial optimization, and the study of graph spectra. In his principal research interests, which include the fields of linear inequalities, combinatorics, and matrix theory, he and his collaborators have contributed fundamental concepts and theorems, many of which bear their names. This volume of Dr

Hoffman's selected papers is divided into seven sections: geometry; combinatorics; matrix inequalities and eigenvalues; linear inequalities and linear programming; combinatorial optimization; greedy algorithms; graph spectra. Dr Hoffman has supplied background commentary and anecdotal remarks for each of the selected papers. He has also provided autobiographical notes showing how he chose mathematics as his profession, and the influences

and motivations which shaped his career.

Contents: The Variation of the Spectrum of a Normal Matrix (with H W Wielandt) Integral Boundary Points of Convex Polyhedra (with J Kruskal) On Moore Graphs with Diameters 2 and 3 (with R R Singleton) Cycling in the Simplex Algorithm On Approximate Solutions of Systems of Linear Inequalities On the Polynomial of a Graph Some Recent Applications of the Theory of Linear Inequalities

of Extremal Combinatorial Analysis On Simple Linear Programming Problems Self-Orthogonal Latin Squares (with R K Brayton & D Coppersmith) On the Nonsingularity of Complex Matrices (with P Camion) A Generalization of Max Flow-Min Cut A Characterization of Comparability Graphs and of Interval Graphs (with P C Gilmore) and 33 other papers  
Readership: Researchers in linear programming and inequalities, combinatorics, combinatorial optimization, graph theory, matrix theory

and operations research.

Keywords: Linear Programming; Combinatorial Optimization; Graph Spectra; Matrix Theory  
Reviews: " The papers themselves are the heart of the book, and each one has a brief introduction that explains its origins and motivation ... The whole is rounded off by a twenty-page autobiography, notable for its insights into the diverse aspects of the life of a professional mathematician, and anecdotes about the many interesting people

whom Hoffman encountered. ” The London Mathematical Society  
“ Each section is well edited along with editorial comment. The book is well written and is helpful to the younger generation. ” Zentralblatt MATH “ Alan's ‘ Autobiographical notes ’ are worthwhile by themselves and should be required reading for any prospective PhD student in a mathematical discipline ... The introduction of this book is entertaining and thought

provoking for anyone in mathematics. The papers and commentaries form a worthwhile sourcebook for anyone from PhD students to professors who is interested in the delightful mathematics at the intersection of combinatorics, linear algebra, and linear programming. ” Interfaces “ These papers are annotated in such a way that the reader learns something about Hoffman's motivation for working on the problems they discuss. We also learn a good deal about Hoffman

and his collaborators, and the academic climate in which the papers were written ... This is a fun book to read. Hoffman is a good storyteller and he has many stories. His writing style is fluent and lively ... The book gives a whirlwind tour through a very fascinating career. It shows what a career in mathematics can be if one is both lucky and talented. ” Mathematical Reviews [Engineering Mathematics - III](#): Disha Publications Engineering Mathematics for

Oliver Heaviside's electromagnetic investigations - from the publication of his first electrical paper in 1972 to the public recognition awarded to him by Lord Kelvin in 1889 - have consistently attracted attention over the years, and of late have become a major source for the study of the development of field theory after Maxwell. "From Obscurity to Enigma" is the

only comprehensive, in-depth analysis of Heaviside's work. It analyses and elucidates his brilliant but often close-to-indecipherable Electrical Papers and traces the evolution of his ideas against the background of growing knowledge in basic electromagnetic theory, telegraphy and telephony during these years. The book will be appreciated by historians of science and technology in the late 19th and early 20th centuries and by physicists and electrical engineers, many of whom are aware of Heaviside's

contributions to their respective fields.

Engineering is a three-hour long test that measures the candidature of participating electrical engineering graduates for taking their postgraduate engineering studies. Also, these candidates take GATE Electrical Engineering for acquiring officer level posts in various Government undertakings and renowned private businesses. Each year, several millions of electrical engineers take GATE Electrical Engineering while only a few millions of them qualify. To ease the

preparation of GATE Electrical Engineering aspirants, EduGorilla has brought its two great tools- GATE Electrical Engineering mock tests and GATE Electrical Engineering online test series. GATE Electrical Engineering is held once in a year with one of the aims to produce a competent workforce of electrical engineers for both government institutions and private businesses. This way, GATE Electrical Engineering is beneficial for both test takers and their future

employers. This is because successful aspirants of this test get their abilities verified for their employability. On the other hand, employers also get saved from separately organizing recruitment exams. Also, the aspirants may pursue postgraduate studies from this test. EduGorilla's GATE EE mock tests and GATE EE online test series help the aspirants in these regards. **Transactions of the American Institute of Electrical Engineers** Oswaal Books and Learning Private

technology to students who are new to the subject. Real-world situations and engineering examples put the theory into context. The inclusion of worked problems with solutions really help aid your understanding and further problems then allow you to test and confirm you have mastered each subject. In total the books contains 410 worked problems, 540 further problems, 340 multiple-choice questions, 455 short-answer questions, and 7 revision tests with answers online. This an ideal text for vocational courses enabling a sound understanding of the knowledge required by technicians in fields such as electrical engineering, electronics and

telecommunications. It will also be an excellent refresher for foundation and undergraduate degree students. It is supported by a companion website that contains solutions to the 540 questions in the practice exercises, formulae to help students answer the questions, multiple choice questions linked to each of the 23 chapters and information about the famous mathematicians and scientists mentioned in the book. Lecturers also have access to full solutions and the marking scheme for the 7 revision tests, lesson plans and illustrations from the book.

In the last thirty years or so, the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers, and beyond, by educational institutions around the world. Indeed, mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society, for example in pure and applied mathematics, engineering, natural sciences, technology, economics, finance, management and so

---

on. This breadth of impact of mathematics implies the urgency of developing research in university mathematics education, and of sharing results of this research widely. This book provides a bespoke opportunity for an international audience of researchers in didactics of mathematics, mathematicians and any teacher or researcher with an interest in this area to be informed about state-of-the-art developments and to heed future research agendas. This book emerged from the activities of the research project INDRUM (acronym for International

Network for Didactic Research in University Mathematics), which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education, with a particular concern for the development of early-career researchers in the field and for dialogue with university mathematicians. The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018. It is an original contribution which highlights key research perspectives, addresses seminal

theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level, including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes.
