Try these hands-on experiments and projects to (safely) learn about the science of electricity, which is the movement of elections between atoms. Take the afternoon to explore the connection between electricity and magnetism, different types of circuits, and static electricity.

For example, in the microcontroller course (Electrical Engineering 454) students typically design and construct a system requiring a real-time microcontroller. In the communication electronics course (Electrical Engineering 440), students design complete communication systems. Most of the student projects use the device currently being studied in class in their design, since they will be using the device and related sensors throughout their
