The Choice Guide to Baby Product Springer Science & Business Media

Selling products used to be the standard way of doing business. Traditionally, it is left to the user to transform the purchase of a product into something that fulfils effectively a final-user need. Today, two streams of research – business management and sustainability – normally with very distinct perspectives on the world, have surprisingly converged to form a common conclusion: selling products is old-fashioned business. Companies should switch their focus to selling need fulfilment, satisfaction, or experiences. Or, in other words, selling integrated solutions or product-services. The business management literature argues that, by focusing on the integrated, final-client needs, and delivering integrated solutions fulfilling these needs, companies will be able to improve their position in the value chain, enhance added value of their offering, and improve their innovation potential. In a business world where many products are becoming equally well-performing commodities, this strategy is one of the ways to avoid a sheer competition on price – a type of competition that Europe never can win with emerging and low-cost economies such as China. In that sense, product-services can mean new business for old Europe. The sustainability knowledge stream argues that need-focused solutions could be inherently more sustainable than products. Product-services could offer the value of use instead of the product itself and decrease the environmental load in two ways. First, companies offering the service would have all the incentives to make the (product-)system efficient, as they get paid by the result. Second, consumers would be encouraged to alter their behaviour as they gain insight into all the costs involved with the use. Until today, the connections and interchange between the two research streams have been quite limited. The question of whether product-services truly are the avenue to a sustainable world is still under discussion. This book aims to develop a systematic view on this issue. The potential of product-services to enhance competitiveness and contribute to sustainable development prompted the EU to invest heavily in the theme under the EU's 5th Framework Programme (FP5; 1997-2002). A variety of research and development projects in the field were supported under the umbrella of the Sustainable Product Development Network (SusProNet). These included MEPSS (Methodology Product Service Systems); Home Services; HiCS (Highly Customerised Solutions); Prosecco (Product-Service Co-design); and Innopse (Innovation Studio and exemplary developments for Product-Service). The projects were undertaken by a mix of European research institutions and companies including Orange, Philips and Nokia. Some of these projects focused on developing methods that could help industries change their output from a product to a service. Others focused on the development of new product-services or solutions (HiCS, Prosecco, Innopse), and yet others tried to analyze under which circumstances product-services are likely to be implemented and accepted by consumers (Home Services). One project focused on dissemination of the concept to SMEs (Lean Services). Other projects focused purely on new product-service development, such as Brainfridge (an intelligent fridge managing its supply chain), ASP-NET (application service providers), Protex (intelligent enzymes) and IPSCON (receivers for wireless telephones). New Business for Old Europe brings together the key outputs from all of these groups to present a state-of-the-art collection on product-service development, prospects and implications for competitiveness and sustainability. The book has a number of aims. First, it attempts to bridge the gap between business and sustainability literature to lead to a better-founded understanding of the business drivers for embarking on product-service development, and its relation with sustainability and competitiveness. Second, the book reviews the large amount of studies that have developed toolkits, methods and approaches that can support

marketers, product developers and strategists in business to develop product-services, selects the best-practice approaches and analyses any gaps. Third, the book examines what opportunities there are for product-service development in a variety of key areas including base materials, information and communication technologies, offices, food and households. Each chapter in this section discusses the area, developments that will stimulate or hinder the market opportunities for product-services, product-service examples, and typical implementation challenges for product-services in that area. These chapters serve as a quick introduction for companies interested in developing product-services in a specific area. Fourth, the book translates all the lessons into suggested approaches for product-service development by companies. Annexes include a lightweight "product-service development manual" and an alphabetical list of useful underlying tools.

How to Live a Low-Carbon Life CRC Press

The professional's favored tool for over a decade, this backbone reference provides a comprehensive set of drafting elements that can be used from contract to contract. Move step-by-step through the contract-creation process --from conducting the initial client meeting to closing the deal, with detailed discussions of the eleven, essential drafting elements, parties, recitals, subject, consideration, warranties and representations, risk allocation, conditions, performance, dates and term, boilerplate, and signatures. A favorite reference tool for professional drafters for over a decade, Drafting Effective Contracts combines a clear analysis of how effective agreements are structured with a practical breakdown of the essential elements of any contract-- giving you the best way to draft contracts. This completely updated practical reference guide presents a consistent structural analysis and a comprehensive set of drafting elements that can be used from contract to contract. You are led step-by-step through the process by which contracts are created, given clear sample contract provisions, and offered direction around the obstacles that may be encountered in drafting agreements for goods and services, promissory notes, guaranties, and secured transactions. Drafting Effective Contracts provides a complete handbook for drafting legal agreements that work. For starters, you get a practical and comprehensive approach to the overall contract process--from conducting the initial client meeting to closing the deal. You'll find a detailed discussion of the 11 drafting elements that every contract may have: Parties Recitals Subject Consideration Warranties and Representations Risk Allocation Conditions Performance Dates and Term Boilerplate Signatures After you get a solid explanation of these essential elements and how they're assembled to create effective contracts, you get key strategies for negotiating the agreement and closing the deal. You get an overview of the legal concepts that underpin various types of agreements --such as promissory notes, guaranties, security agreements, and agreements for the sale of goods and services. Then you'll see how to apply the drafting elements to create the finished contract. You also get an array of sample agreements and contracts as well as statutory material. Only Drafting Effective Contracts combines the best benefits of a forms book and a treatise to give you the most complete tool for building effective legal agreements.

Poignant, touching, and lively, this memoir of a woman who loses her mother and creates a new life for herself in Paris will speak to anyone who has lost a parent or reinvented themselves. Lisa Anselmo wrapped her entire life around her mother, a strong woman who was a defining force in her daughter's life—maybe too defining. When her mother dies from breast cancer, Lisa realizes she hadn't built a life of her own, and struggles to find her purpose. Who is she without her mother—and her mother's expectations? Desperate for answers, she reaches for a lifeline in the form of an apartment in Paris, refusing to play it safe for the first time. What starts out as a lurching act of survival sets Lisa on a course that reshapes her life in ways she never could have imagined. But how can you imagine a life bigger than anything you've ever known? In the vein of Eat, Pray, Love and Wild, My (Part-time) Paris Life a story is for anyone who's ever felt lost or hopeless, but still holds out hope of something more. This candid memoir explores one woman's search for peace and meaning, and how the ups and downs of expat life in Paris taught her to let go of fear, find self-worth, and create real, lasting happiness.

This book will introduce the fast changing world of marketing communication, with strong emphasis on integrated marketing perspective to students. Though advertising may be a major player, integration of other communication tools with advertising is dealt in detail. The text covers all aspects of the marketing promotions mix namely advertising, sales promotion, direct marketing, public relations, event marketing and personal selling. The book strives to explain the role of advertising and promotion in today's business world, and how an organization can use all the promotion tools to communicate with target customers. Many of the current and popular advertising used by marketers is included. Numerous examples are cited to show how integrated marketing communication is used in consumer and Business-to-Business marketing. Global perspective is dealt through international advertising. Social, ethical and economical issues which affect the promotional activities are also discussed. Integrated marketing communication covers all parts of promotional activities covered under six sections divided into 23 chapters. The book is meant especially for students specializing in marketing stream. It can be of immense utility to students pursuing MBA, PGDBM & MMS. At the end of each chapter application orientation such as assignment and projects are given to help the students to gain rich experience in using communication tools.

Design for Sustainability is a practical approach to design which focuses on the challenges and issues faced by those designing consumer products in the 21st Century. It is written from a design perspective and aimed at both professional and student industrial and product designers, and those involved in managing design. The book begins by summarising the historical and current issues of the environmental debate in the context of sustainable product development, highlighting the benefits gained from considering the impact on the environment and issues of sustainability when designing. The authors answer the questions: What is sustainable product development and why is it important? What are the main drivers of sustainable product development? They explain how design can help to control human impact on the environment by not only minimising pollution, waste, energy use and use of scarce resources, but also by thinking outside the box to create systems and services that can reduce the number of products manufactured. The aim is to put sustainable development within a commercial context and introduce a new focus for design. Design for Sustainability outlines and assesses the methods, tools and techniques available to designers, both for design innovation and design improvement. A wide range of case studies are presented across a number of product sectors including electrical goods, IT and furniture. Initially they demonstrate product improvement and redesign, examples include those that reduce waste, pollution and energy consumption, designing for recycling and reuse of parts. Further examples are then provided exemplifying the more radical approach of system and service design. The final section takes the reader through a whole sustainable design project from start to finish, from brief to manufacture. References and sources of information are also included.

Advances in Usability Evaluation Routledge

Business-as-usual, it is widely accepted, will exceed the Earth's carrying capacity in an alarmingly short space of time. In simple terms, we need to learn to use the world's rapidly depleting resources in a significantly more efficient manner. Practical and readily adopted solutions are needed now. Eco-efficiency-or "produce more with less" – is achieved when goods and services satisfy human needs, increase the quality of life at competitive prices and when environmental impacts and resource intensity are decreased to a degree that keeps them within the limits of Earth's expected carrying capacity. Eco-efficiency – a term first proposed by the World Business Council for Sustainable Development in 1992 – is a management approach that allows businesses to carry out environmental protection measures from a market-oriented point of view, with the aim of illustrating that ecology and the economy do not need to be a contradiction. Indeed, eco-efficiency has been portrayed as a win-win-for both business and the environment. This book, which developed out of two conferences on eco-efficiency held in Düsseldorf in 1998 and 2001, is edited by Ernst Ulrich von Weizsäcker and his team from the Wuppertal Institute for Climate, Environment and Energy, one of the world's leading research programmes on

resource productivity. The aim is not simply to explain the past and present of eco-efficiency but to look forward to and encourage a future where the comprehensive take-up of the concept by business, government and consumers could lead to innovation on a grand scale and the possibility of a giant leap beyond towards overall sustainability. There have been considerable achievements to date. The Dow Jones Sustainability Index, which aims to list the most sustainable corporations for investors, includes companies such as BASF, Climatex, Henkel and Matsushita/Panasonic (all represented in this book), who are implementing eco-efficiency measures. A number of political initiatives have also been formed. In December 2001, the German government suggested a National Sustainability Strategy to measure Germany's sustainable development. While this not yet an accepted political target or even law, it shows that politics is moving toward binding targets for increasing efficiency. Eco-Efficiency and Beyond collects together the leading thinkers on the topic and aims to illustrate not only that the concept should be part of every business strategy but that it is a key trigger for innovation. Innovation cuts through paradoxes. It is the creation of solutions to conflicting demands. Flying in a vacuum gave us rockets and satellites; switching electrons through insulators gave us Silicon Valley and the digital age. Sustainable development presents a similar field of paradoxical innovation forces: i.e. provide affordable products and services for the growing unmet needs of the world population while reducing environmental impacts. This book is the definitive collection on eco-efficiency and will be required reading for business, government, NGOs and academicians.

The 19th CIRP Conference on Life Cycle Engineering continues a strong tradition of scientific meetings in the areas of sustainability and engineering within the community of the International Academy for Production Engineering (CIRP). The focus of the conference is to review and discuss the current developments, technology improvements, and future research directions that will allow engineers to help create green businesses and industries that are both socially responsible and economically successful. The symposium covers a variety of relevant topics within life cycle engineering including Businesses and Organizations, Case Studies, End of Life Management, Life Cycle Design, Machine Tool Technologies for Sustainability, Manufacturing Processes, Manufacturing Systems, Methods and Tools for Sustainability, Social Sustainability, and Supply Chain Management.

What does it take to succeed today both personally and professionally? In looking for answers, one obvious place to start would be to talk to self-made men and women who themselves are successful. That's exactly what Michael W. Sonnenfeldt—an accomplished entrepreneur—has done here in this ground-breaking book. Drawing on the wisdom, insight and experience of members of TIGER 21 (The Investment Group for Enhanced Results in the 21st Century), and supplementing that with additional research and interviews, Sonnenfeldt offers real-world guidance and often counter-intuitive advice and conclusions. Among the things you'll learn are: Why grit and focus trump intelligence just about every time. Why having—and listening to—a wise mentor will create shortcuts to getting more done. What you need to do to avoid getting in your own way. And why. 'Shirtsleeves to shirtsleeves in three generations' can be avoided by taking some simple, commonsense steps. Think BIGGER will inspire you, no matter where you are in your business career. It will also show you that the skills you use to grow wealth can be applied to making the world a better place. Your success can benefit others. Michael W. Sonnenfeldt is the founder and chairman of TIGER 21, the premier peer-to-peer learning network for high-net-worth first generation wealth creators in North America and London. He is an accomplished serial entrepreneur, philanthropist and most excited that all of his proceeds from this book will support the TIGER 21 Foundation for young entrepreneurs.

Verbeke and Merchant have assembled a remarkable collection of brand new essays by the who's-who of international business. It will become a standard reference for both junior and senior scholars working in this increasingly important area. Ravi Ramamurti, Northeastern University, US
Leading thinkers about the multinational enterprise offer both concise syntheses and critical reflections of the state of the art on international strategic management research. They in particular highlight the potential of internalization theory as a central paradigm for the field, and critically examine pertinent issues such as the complex notion of distance in international business. Refreshingly, they do not shy away from naming flaws in recent work, while offering avenues to

improve the quality and impact of future research. Klaus Meyer, University of Bath, UK
The Handbook provides an impressive state-of-the-art overview of the international strategic management field as an area of scholarly inquiry. The great strength of the work is the thoughtfulness of the messages conveyed by the expert team of authors. The implications for future international strategy research and for international management practice are profound and will influence the next generation of scholars in international strategy as well as senior level managers. Corporate executives will continue to operate in a world that is far from flat and will use this volume as a reliable compass, in the form of powerful conceptual frameworks, to navigate uncharted territory in the global economy. The Handbook presents a collection of 24 original research papers that should serve international strategy scholars and reflective MNE managers alike.

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g. energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table 1 showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.

Updated throughout to reflect advances over the last decade, the Fifth Edition continues the handbook's tradition of authoritative coverage of fundamentals, production methods, properties, and applications of plastics and polymer-based materials. It covers tooling for plastics fabrication processes, thermoplastics, thermosetting plastics, foamed plastics, reinforced plastics, plastisols, and new developments in mold design. It also discusses rubber compounding and processing technologies. More recent developments in polymer fabrication and processing, including electrospinning, electrografted coating, polymer-metal hybrid joining, flex printing, and rapid prototyping/ 3D printing, are also presented. The handbook highlights advanced materials including natural and synthetic gnanosize polymers, their unusual properties, and innovative applications, as well as polymer-carbon nanocomposites, graphene-based polymer nanocomposites, smart healable polymer composites, smart polymer coatings, electroactive polymers, polymer nanomaterials, and novel nano-/microfibrillar polymer composites. It offers updates on polymer solar battery development, plastics recycling and disposal methods, new concepts of "upcycling" and single-polymer composites, renewable synthetic polymers, biodegradable plastics and composites, and toxicity of plastics. The book also provides an overview of new developments in polymer applications in various fields including packaging, building and construction, corrosion prevention and control, automotive, aerospace applications, electrical and electronic applications, agriculture and horticulture, domestic appliances and business machines, medical and biomedical applications, marine and offshore applications, and sports.

The increasing demand for energy, raw materials and goods arising from world population growth, the emerging concept of sustainable development is concerned with meeting such challenges. The widely accepted Brundtland definition of sustainable development states that it is the ability to meet the needs of the present without compromising the ability of future generations to meet their own needs. The papers in this volume are from a conference organised by the University of Liverpool in September 2003 and are dedicated to the holistic study and interchange of ideas on the theory, technology, tools, methodology for the entire product life cycle within the framework of sustainable development. Design and Manufacture for Sustainable Development 2003 brings together industry leaders and the cutting edge of academic research in this critical area and includes, Life cycle engineering - from methodology to enterprise culture teaching mechanical engineering course relating to the environment Biodegradable plastics for hygienic disposable products Assessment for product sustainability An exploration of the role values play in designer decision making and how this effects ecodesign outcomes Laser technology applied to sustainable demolition and high-energy, re-usable bricks Sustainability principles for product design Public perceptions of sustainability, energy efficiency and recycling - how these can inform the design process
