Because the field of plastics is one of the fastest changing areas today, the need arises to offer relevant, comprehensive material on polymers. An established source of information on modern plastics, the *Plastics Technology Handbook* continues to provide up-to-date coverage on the properties, processing methods, and applications of polymers. Retaining the easy-to-follow structure of the previous editions, this fourth edition

includes new topics of interest that reflect recent developments and lead to better insights into the molecular behavior of polymers. New to the Fourth Edition Advances in supramolecular polymerization, flame retardancy, polymer-based nanomedicines, and drug delivery The new concept of oxo-biodegradable polymers Broadened discussion on plastic foams and foam extrusion processes More information on the processing and applications of industrial polymers, including the emerging field of nanoblends Developments in polymer synthesis and applications, such as polymeric sensors, hydrogels and smart polymers, hyperbranched polymers, shape memory polymers, polymeric optical fibers, scavenger resins, polymer nanocomposites, polymerization-filled composites, and wood-polymer composites A state-of-the-art account of the various available methods for plastics recycling Advances in the use of polymers in packaging, construction, the automotive and aerospace industries, agriculture, electronics and electrical technology, biomedical applications, corrosion prevention, and sports and marine applications *Plastics Technology Handbook, Fourth Edition* thoroughly covers traditional industrial polymers and their processing methods as well as contemporary

The increasing demand for energy, raw materials and goods arising from world population growth, the emerging concept of sustainable development is concerned with meeting such challenges. The widely accepted Brundtland definition of sustainable development states that it is the ability to meet the needs of the present without compromising the ability of future generations to meet their own needs. The papers in this volume are from a conference organised by the University of Liverpool in September 2003 and are dedicated to the holistic study and interchange of ideas on the theory, technology, tools, methodology for the entire product life cycle within the framework of

sustainable development. Design and Manufacture for Sustainable Development 2003 brings together industry leaders and the cutting edge of academic research in this critical area and includes, Life cycle engineering - from methodology to enterprise culture teaching mechanical engineering course relating to the environment Biodegradable plastics for hygienic disposable products Assessment for product sustainability An exploration of the role values play in designer decision making and how this effects ecodesign outcomes Laser technology applied to sustainable demolition and high-energy, re-usable bricks Sustainability principles for product design Public perceptions of sustainability, energy efficiency and recycling - how these can inform the design process Energy Efficiency in Household Appliances CRC Press

If you are a supply chain manager, an executive, an entrepreneur, or a stakeholder in a sustainable business, this book will help you develop the awareness and skills needed to support sustainable supply chain management in your firm. The authors introduce the many ways that social and environmental responsibility can be integrated into supply chain management, from sustainable product and process design to programs and techniques that support product end-of-life management. The book begins with a discussion of sustainability and business strategy. It then explores product and process design, sustainable purchasing and logistics, and product end-of-life management topics. The authors include real-world examples and cases from some of the world's leading companies in sustainable supply chain management. The examples range from small local companies to large multinational players to give a broad range of ideas to the reader. With case examples, workshops, and step-by-step instructions on how to create a sustainable supply chain, *Sustainability Delivered* is the most practical and usable book on the market that will help you and other business leaders to authentically pursue and deliver on sustainability ideals

Global consumption of raw

materials currently goes beyond and operational implications of the earth's regenerative capacity, but the circular economy offers a more sustainable model which also provides new business opportunities. Mastering the Circular Economy is an introduction to circularity from a business and value chain management perspective. With many reflections and exercises throughout, the book draws a direct link between relevant recent theory and practice and offers students and practitioners a deeper understanding of the topic. It looks at both the macro and micro context of the circular economy, from the government and societal view to the impact of new business models in an individual company. Starting from the corporate imperative of moving from linear to circular business models, Mastering the Circular Economy covers the associated opportunities and challenges for organizations, from regulation and risk to value chain collaboration, reverse logistics and product quality. Part two of the book helps students to pull together everything they've learned and see how the concepts play out in the real world by guiding them through application in the online business simulation game The Blue Connection (free basic access is included with the book). Readers are continuously asked to reflect on the choices they would make in different roles to demonstrate a full understanding of the strategic

the circular economy.

The 19th CIRP Conference on Life Cycle Engineering continues a strong tradition of scientific meetings in the areas of sustainability and engineering within the community of the International Academy for Production Engineering (CIRP). The focus of the conference is to review and discuss the current developments, technology improvements, and future research directions that will allow engineers to help create green businesses and industries that are both socially responsible and economically successful. The symposium covers a variety of relevant topics within life cycle engineering including Businesses and Organizations, Case Studies, End of Life Management, Life Cycle Design, Machine Tool Technologies for Sustainability, Manufacturing Processes, Manufacturing Systems, Methods and Tools for Sustainability, Social Sustainability, and Supply Chain Management.

Poignant, touching, and lively, this memoir of a woman who

loses her mother and creates a new life for herself in Paris will speak to anyone who has lost a parent or reinvented themselves. Lisa Anselmo wrapped her entire life around her mother, a strong woman who was a defining force in her daughter's life—maybe too defining. When her mother dies from breast cancer, Lisa realizes she hadn't built a life of her own, and struggles to find her purpose. Who is she without her mother—and her mother's expectations? Desperate for answers, she reaches for a lifeline in the form of an apartment in Paris, refusing to play it safe for the first time. What starts out as a lurching act of survival sets Lisa on a course that reshapes her life in ways she never could have imagined. But how can you imagine a life bigger than anything you've ever known? In the vein of Eat, Pray, Love and Wild, My (Part-time) Paris Life a story is for anyone who's ever felt lost or hopeless, but still holds out hope of something more. This candid memoir explores one woman's search for peace and meaning, and how the ups and downs of expat life in Paris taught her to let go of fear, find self-worth, and create real, lasting happiness.

"Introduction to Product/Service-System Design" contains a collection of practical examples demonstrating how to design a PSS in

---

industry. These recent examples are the results of applying various theories developed in different countries and therefore accommodating diverse cultural differences.

Providing a useful overall guide to the state of the art in theory and practice, each chapter covers the cutting edge of a different methodology or practice. The book's focus on design is also evident in the discussion of how to anticipate and utilize the various dynamics within each dimension.

"Introduction to Product/Service-System Design" will help improve working processes and inspire creative thinking for the wide range of people involved in designing a PSS: designers, marketing professionals, sales staff, production engineers, and service engineers. It can also serve as a reference book for university students on advanced courses.

What does it take to succeed today both personally and professionally? In looking for answers, one obvious place to start would be to talk to self-made men and women who themselves are successful. That's exactly what Michael W. Sonnenfeldt—an accomplished entrepreneur—has done here in this ground-breaking book.

Drawing on the wisdom, insight and experience of members of TIGER 21 (The Investment Group for Enhanced Results in the 21st Century), and supplementing that with additional research and interviews, Sonnenfeldt offers real-world guidance and often counter-intuitive advice and conclusions. Among the things you'll learn are: Why grit and focus trump intelligence just about every time. Why having—and listening to—a wise mentor will create shortcuts to getting more done. What you need to do to avoid getting in your own way. And why. 'Shirtsleeves to shirtsleeves in three generations' can be avoided by taking some simple, commonsense steps. Think BIGGER will inspire you, no matter where you are in your business career. It will also show you that the skills you use to grow wealth can be applied to making the world a better place. Your success can benefit others. Michael W. Sonnenfeldt is the founder and chairman of TIGER 21, the premier peer-to-peer learning network for high-net-worth first generation wealth creators in North America and London. He is an accomplished serial entrepreneur, philanthropist and most excited that all of his proceeds from this book will support the TIGER 21 Foundation for young entrepreneurs.

Updated throughout to reflect advances over the last decade, the Fifth Edition

continues the handbook's tradition of authoritative coverage of fundamentals, production methods, properties, and applications of plastics and polymer-based materials. It covers tooling for plastics fabrication processes, thermoplastics, thermosetting plastics, foamed plastics, reinforced plastics, plastisols, and new developments in mold design. It also discusses rubber compounding and processing technologies. More recent developments in polymer fabrication and processing, including electrospinning, electrografted coating, polymer-metal hybrid joining, flex printing, and rapid prototyping/ 3D printing, are also presented. The handbook highlights advanced materials including natural and synthetic gfnanosize polymers, their unusual properties, and innovative applications, as well as polymer-carbon nanocomposites, graphene-based polymer nanocomposites, smart healable polymer composites, smart polymer coatings, electroactive polymers, polymer nanomaterials, and novel nano-/microfibrillar polymer composites. It offers updates on polymer solar battery development, plastics recycling and disposal methods, new concepts of "upcycling" and single-polymer composites, renewable synthetic polymers, biodegradable plastics and composites, and toxicity of plastics. The book also provides an overview of new

---

developments in polymer applications in various fields including packaging, building and construction, corrosion prevention and control, automotive, aerospace applications, electrical and electronic applications, agriculture and horticulture, domestic appliances and business machines, medical and biomedical applications, marine and offshore applications, and sports.

Verbeke and Merchant have assembled a remarkable collection of brand new essays by the who's-who of international business. It will become a standard reference for both junior and senior scholars working in this increasingly important area.

Ravi Ramamurti, Northeastern University, US

Leading thinkers about the multinational enterprise offer both concise syntheses and critical reflections of the state of the art on international strategic management research. They in particular highlight the potential of internalization theory as a central paradigm for the field, and critically examine pertinent issues such as the complex

notion of distance in international business. Refreshingly, they do not shy away from naming flaws in recent work, while offering avenues to improve the quality and impact of future research.

Klaus Meyer, University of Bath, UK

The Handbook provides an impressive state-of-the-art overview of the international strategic management field as an area of scholarly inquiry. The great strength of the work is the thoughtfulness of the messages conveyed by the expert team of authors. The implications for future international strategy research and for international management practice are profound and will influence the next generation of scholars in international strategy as well as senior level managers. Corporate executives will continue to operate in a world that is far from flat and will use this volume as a reliable compass, in the form of powerful conceptual frameworks, to navigate uncharted territory in the global economy. The Handbook presents a collection of 24 original research papers that

should serve international strategy scholars and reflective MNE managers alike.

The volume contains eight articles together with comments by twenty authors and discussants on the topic of innovations and sustainability. It provides a competently written, balanced and differentiated state-of-the-art insight into the relation between innovations and sustainability from the perspective of evolutionary economics. The scope of the contributions encompasses the technological, social, organizational, and political dimensions of the topic. Each article is discussed by a competently written commentary providing a critical evaluation and relating it to the relevant literature. Particular interest lies on the issues of steering opportunities and path formation capabilities by decentralized agents, or governmental institutions from the viewpoint of evolutionary economics.

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach

that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of

standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency. *Advances in Usability Evaluation* The American Oil Chemists Society Climate change is one of the most pressing issues facing the world today, as it affects all sectors of life, be it global economics or human rights activism; timely action is required to avoid global catastrophe. Understanding the importance of climate change mitigation, renewable energies, clean technologies, and green development has become necessary for effective leadership. The Handbook of Research on Green Economic Development Initiatives and Strategies provides the necessary information to reduce the climate change vulnerability of socio-economic systems in the most cost-effective manner. This handbook of research is ideal for policy makers, non-governmental organizations (NGOs),

government agencies, businesses, and professionals looking to temper the effects of climate change.

*Think Bigger* Washing Machine F 1256 W This is the instruction manual for the Zanussi washing machine, model number F 1256 W. The Washing Machine Manual The Choice Guide to Baby Product Sustainable development will not be possible without fundamental improvements in resource productivity and energy efficiency, the adaptation of material flows into natural cycles as well as a radical change in production and consumption patterns. In essence, what is required is not only an ecological approach to product design but also new marketing and consumption patterns for products that can satisfy our needs in a more environmentally sound way. In recent years there has been growing interest in the possibilities of eco-services to achieve some of these aims. Ecologically oriented leasing, renting, pooling and sharing, where the emphasis is placed on the sale of a product's use rather than on the product itself, offer great possibilities for innovation and environmental impact reduction. At the same time, there are opportunities to

---

create new commercial enterprises, produce added value to production and distribution functions, and therefore create jobs. Up until now, however, there has been little research about the state of the art in eco-services, how new services can be developed, what the attitudes of consumers are to services rather than products and what the consequences of such a structural adjustment would be for firms. Eco-service Development addresses this lack of research, first by providing a comprehensive inventory and analysis of current eco-services in four European countries: Germany, Austria, the Netherlands and Spain. It then systematically explores the options open to market participants, the potential for environmental impact reduction, potential barriers to eco-services (such as consumer and producer resistance) and, finally, with what political and legal instruments ecologically oriented services can best be promoted. The book analyzes eight consumer sectors – washing, cleaning, cooking, entertainment, gardening, do-it-yourself, mobility and leisure time – from the point of view of both supply and demand and highlights the optimization

potential and development perspectives for commercial new use eco-service concepts. This book is the most comprehensive analysis yet published of how eco-services are being implemented and how they could best be encouraged and contains valuable lessons for policy-makers, interested businesses and all those in the academic community searching for ways to dematerialize the economy.

A favorite reference tool for professional drafters for over a decade, *Drafting Effective Contracts* combines a clear analysis of how effective agreements are structured with a practical breakdown of the essential elements of any contract-- giving you the best way to draft contracts. This completely updated practical

reference guide presents a consistent structural analysis and a comprehensive set of drafting elements that can be used from contract to contract. You are led step-by-step through the process by which contracts are created, given clear sample contract provisions, and offered direction around the obstacles that may be encountered in drafting agreements for goods and services, promissory notes, guaranties, and secured transactions. *Drafting Effective Contracts* provides a complete handbook for drafting legal agreements that work. For starters, you get a practical and comprehensive approach to the overall contract process--from conducting the initial client meeting to closing the deal. You'll find a detailed discussion of the 11 drafting elements that every contract may have: Parties Recitals Subject Consideration Warranties and Representations Risk Allocation Conditions Performance Dates and Term Boilerplate Signatures After you get a solid explanation of these essential elements and how they're assembled to create effective contracts, you get key strategies for negotiating the agreement and closing the deal. You get an overview of the legal concepts that underpin various types of agreements --such as promissory notes, guaranties, security agreements, and agreements for the sale of goods and services. Then you'll see how to apply the

A comprehensive resource, this handbook covers consumer product research, case study, and application. It discusses the unique perspective a human factors approach lends to product design and how this perspective can be critical to success in the market place.

Divided into two volumes, the handbook includes introductory and summary chapters on case study design, design methods and process, error and hazards, evaluation methods, focus groups, and more. It discusses white goods, entertainment systems, personnel audio devices, mobile phones, gardening products, computer systems, and leisure goods.

This book gets behind much generality about globalisation

to examine the production of relatively familiar commodities such as refrigerators and ovens in different countries. By considering a range of countries - China, Taiwan and South Korea, South Africa, Brazil and Turkey - it makes a substantive contribution to the understanding of the diffusion of management methods, the role of the state in employee relations, the nature of trade unionism and the impact of social structure on production relations.

Successful interaction with products, tools and technologies depends on usable designs, accommodating the needs of potential users and does not require costly training. In this context, this book is concerned about emerging concepts, theories and applications of human factors knowledge focusing on the discovery and understanding of human interaction with products and systems for their improvement. The book is organized into four sections that focus on the following subject matters:

- Usability Methods and Tools
- Theoretical Issues in Usability
- Usability in Web Environment
- Miscellaneous In the

section Usability Methods and Tools, studies related with new and improved methods and tools for the advancement in the efficiency of the usability studies is reported. In this context, this book provides studies, which cover everything from checklists and heuristics development to kaizen and biometrics measurement techniques. Also, the use of tools, like eye tracker, virtual reality and augmented reality is discussed. The section Theoretical Issues in Usability concentrates on theoretical approaches of usability that allow justifying the impact of usability in our lives. Review studies about the importance of usability and connections between ergonomics and virtual reality were reported. General approaches raised the concepts of modeling and simulation to explain changes in human performance and accidents. The section Usability in Web Environment concentrates on studies associated with the use of the Internet environment and mainly discusses the development of new

---

services and creates social communities. The section Miscellaneous shows various studies that focus on aesthetic, affective and emotional design, corporate and inclusive design.
