A Level Chemistry Revision \"Shorthand Electron Configuration\"

Electrons move around the nucleus in different energy levels. The energy levels are called electron shells. Electronic configuration: The arrangement of electrons into shells for an atom. This can be figured out by following some rules: Electrons always occupy shells that are closest to the nucleus first. When a shell becomes full, electrons will fill the next shell.

Electron Configurations Practice - Key Note: The electron configurations in this worksheet assume that lanthanum (La) is the first element in the 4f block and that actinium (Ac) is the first element in the 5f block. If your periodic table doesn't agree with this, your answers for elements near the f-orbitals may be

slightly different.
