I'm constantly telling you the best way to learn is by practicing questions, so I've made you a book full of practice questions. Multiple choice questions to reflect the style of exam questions, activities to complete, equations for you to balance, compounds for you to work out the formula for, lots of things that you need to recall and practice long answer exam style questions. This book is not designed as a text book or revision guide, but as a workbook. There are lots of good (and bad) expensive and free revision guides out there, on my YouTube channel and other great websites. So there is no point in me adding to the masses. All the teaching, all the new content, is available for free on my YouTube channel, this book is for you to practice and learn. The best way to approach this is to watch the teaching video and make notes, or after class try a section and check the answers. Any corrections that are needed after the book is published will be listed on my website, www.primrosekitten.com these will be corrected in the next

version of the book. Answers are provided for the sections where you need to work out the answers for yourself, not the sections where you are just filling things in from a video or website. in toothpaste? Does your nose run in space? What are stars made of? This book answers those tantalising or perplexing questions for which you thought you'd never find an answer. A book for the naturally curious, as well as those seekers after scientific truths, it unravels both those things we take for granted, such as when you boil an egg, why does the yolk stay in the middle, or why is the sky blue, as well as questions which probe deeply, such as, what does an atom look like, or what was there before the beginning of time? if you were to write in the dust on the moon, how big would the letters have to be so you could see them from earth without a telescope? Drawing on the expertise of a team of enthusiastic scientists around the world, authoritative, entertaining, and often a touch humorous, it will appeal to anyone who's ever been curious about life on earth.
