The purpose of company management reports is to support the decision makers of an organisation with timely and proper information. The needs and expectations of those individuals regarding management reports are partly subjective. Does the nationality of business decision makers play a role in the way they interpret and use the information put at their disposal in internal company reports? Milena Di Bucchianico looked for an answer to this question. She carried out an empirical investigation on Italian and German decision makers working in the same organisation and with comparable responsibilities, with the purpose to verify if, and how, their national culture influences the contribution of company management reports to their individual decision making process.

UWB (ultra-wideband) has been investigated for many decades but only recently has it become commercially viable. With the advent of WiMedia UWB technology and its associated standard specifications, the stage is set for the next generation of WPAN applications to take root. WiMedia UWB focuses on the ECMA-368 standard. Both PHY layer and MAC sublayers specified in this standard are explained in great detail. The book offers not only the facts about the requirements of the standard, but also the motivation and logic behind them. To give a comprehensive perspective of the UWB technology to the reader, other interrelated topics are also examined in this book. These include the history of UWB and its recent standardization attempts; UWB applications and advantages; UWB spectrum allocation and regulations around the world; UWB platform clients: Certified Wireless USB (CW-USB), Bluetooth, and WLP (WiMedia Link layer Protocol, which enables Internet Protocol over UWB); as well as some important implementation issues

and considerations. As the first application of WiMedia UWB, CW-USB is given a special and more comprehensive treatment. This book is ideal for any engineer or engineering managers who are expecting to either develop a solution based on UWB or to integrate it with other devices. It will also be of interest to researchers who require an overview or an interpretation of the technology. One of the first books to describe the WiMedia standards (PHY and MAC) in detail A comprehensive approach to de-obfuscating the entire WiMedia UWB technology, from the PHY through the MAC, the MAC clients, the applications, and the regulations Includes a description of the CW-USB standard and its relation to WiMedia MAC Provides an up-to-date view of the UWB spectrum allocations and associated regulations around the world Derived from hands-on experiences in WiMedia UWB standards and system development efforts. The Limits of Business Development and Economic Growth details what this means for your company, your industry or your country! There are limits to business development and economic growth. With the help of modern production and information technologies, companies are coming ever closer to the limits of what can be achieved but ultimately nothing can be done in less than no time and at less than no cost. Understanding Green Business Elsevier Company Profiles: Saratoga Electronic Solutions Inc Electronic Security Systems Elsevier Electronic Security Systems Xlibris Corporation This book examines the organizational change of the wind sector in the course of product and value chain modularization. The methodology developed here analyzes modularization using standardized variables, and allows a classification of value chains at company and component levels. Necessary adaptation and learning processes change externalities and location requirements, which leads to a reorganization of relationships between components-as well as companies-and creates an organizational discontinuity. This leads ultimately to a new spatial configuration of the industry and its value chains. The author works as Export Advisor for Wind Energy at the Consulate General of Denmark in Hamburg. It will also be of interest to professionals working in product development and PhD students. Information Technology Outlook 2004 Casemate Publishers The book presents about 100 current examples of how energy and materials

can be saved in manufacturing companies. They serve to show which measures can be used in modern companies to exploit the potential for resource efficiency. The book is aimed at practitioners in companies and consulting firms, but is also suitable for the university sector as a practical introduction to the topic of resource efficiency. The materials used account for almost 43 percent of the costs of an average industrial company in Germany. Personnel costs, on the other hand, are only 22 percent, while energy costs are as low as 2 percent. If a company wants to save costs, above all it must consider the use of materials and produce in a resource-efficient manner. This simultaneously relieves the environment and reduces dependence on scarce raw materials. The implementation of resource efficiency is not easy. There are indeed numerous starting points in production, often in process innovations or in product development. However, only a few companies publish their measures and savings potentials. In practice, this means that there are often no learning examples in practice, but some of them are explicitly listed in this work. As you can see, resource efficiency in production and products can also be seen as a success factor for many companies. In the project 100 Pioneers in Efficient Resource Management, committed companies from Baden-Wuerttemberg are showing their solutions. The project was carried out by a competent team from the Pforzheim University and the State Agency for Environmental Technology. Leading trade associations in Baden-Württemberg have supported it. Why Understanding Green Business? With every new day society has become more aware of the increasing threats to the globe due to the non-environmentally friendly practices that have been occurring in the previous years.
