If you look at the schematic you will see that the 1K resistor, LED, and switch are all connected in series with the 9V battery. When you build the circuit, you will be able to turn the LED on and off with the switch. You can look up the color code for a 1K resistor using the graphical resistance calculator. Also, remember that the LED needs to be

plugged in the right way (hint - the long leg goes to the positive side of the circuit).

An integrated circuit or monolithic integrated circuit (also referred to as an IC, a chip, or a microchip) is a set of electronic circuits on one small plate ("chip") of semiconductor material, normally silicon. This can be made much smaller than a discrete circuit made from independent components.
