This book offers an accessible introduction to England's sixteenth- and early seventeenth-century playing industry and a fresh account of the architecture, multiple uses, communities, crowds, and proprietors of playhouses. It builds on recent scholarship and new documentary and archaeological discoveries to answer the questions: what did playhouses do, what did they look like, and how did they function? The book will accordingly introduce readers to a rich and exciting spectrum of "play" and playhouses, not only in London but also around England. The detailed but wide-ranging case studies examined here go beyond staged drama to explore early modern sport, gambling, music,

drinking, and animal baiting; they recover the crucial influence of female playhouse owners and managers; and they recognise rich provincial performance cultures as well as the burgeoning of London's theatre industry. This book will have wide appeal with readers across Shakespeare, early modern performance studies, theatre history, and social history.

This ambitious book presents a new interpretation of Chinese thought guided both by a philosopher's sense of mystery and by a sound philosophical theory of meaning. That dual goal, Hansen argues, requires a unified translation theory. It must provide a single coherent account of the issues that motivated both the recently untangled Chinese linguistic analysis and the familiar moral-political disputes. Hansen's unified approach uncovers a philosophical sophistication in Daoism that traditional accounts have overlooked.

*Trivium in Practice* brings together a series of case studies written by educators who were inspired by Martin Robinson's first book, *Trivium 21c*. Taken together, these case studies reveal how, regardless of setting or sector, the trivium can deliver a truly great education for our children. Great teaching has the three elements of the trivium at its centre. Grammar: foundational knowledge and skills. Dialectic: questioning, thinking and practising. Rhetoric: the ability to express oneself beautifully, persuasively and articulately in any form. The trivium is a helpful way for a

---

teacher to think about the art of teaching. Through the model of the trivium traditional values and progressive ideals can coexist; both knowledge and cultural capital matter and skills are interwoven with content. The trivium isn't a gimmick to be imposed on to a curriculum; it is a tried and tested approach to education. It is the key to great teaching and learning, as this group of educators discovered. Tom Sherrington and a group of teachers from Highbury Grove School share examples of how they have used the trivium in English, maths, sociology and history, and detail how the trivium has helped them develop a whole school framework for teaching and learning, including a whole school approach to improving spoken English. Sam Gorse explains how the trivium has influenced curriculum planning at Turton School, discussing how it helped departments with differing pedagogical approaches to find common ground. The trivium has influenced them to rethink how they plan the curriculum and use the school space, creating zones where subjects can interact and influence each other. Nick Wells explains how his school used the trivium as a prism through which to view their continuing improvement. By using it to inform a mastery curriculum, he saw how it might help students to fly even higher than they have done in the past – not just in terms of their exam results, but also in terms of their understanding of, and ability to contribute to, the world around them. David Hall, Nigel Matthias and Nick Barnsley used the trivium as a framework to question what they really wanted education to be about at a Bay House school. They discuss their approaches to curriculum planning and assessment, using their challenging new sixth form course and their Year 7 Developing Learning Programme as examples. Mike Grenier makes connections between the key tenets of the Slow Education movement and the evolving nature of the trivium: at the heart of both is a respect for the student–teacher relationship and a strong belief in the need for a balanced, yet challenging, curriculum. Nick Rose takes as his starting point the idea that we might be able to apply some of the principles of evolution through natural selection to the realm of culturally transmitted ideas. He gives a brief ‘natural history’ of education and examines how grammar, dialectic and rhetoric might be understood in light of the processes of inheritance, selection and variation which operate at the heart of evolutionary systems. Carl Hendrick explores how Mikhail Bakhtin’s ideas of ‘dialogic’, ‘carnival’ and ‘inauthenticity’ can inform classroom practice and support the broader ambition of the trivium. These educators have found that trivium education has brought a range of tangible benefits for their students. These include: greater confidence, enhanced development of rigorous analytical skills, improved oracy and confidence in speaking in front of audiences, an appreciation of the value of acquiring and applying knowledge, refined skills in questioning and debating, developed creativity, independence and critical thinking, the ability to form and express considered opinions and, importantly, the enjoyment of learning. Fundamentally,

---

these educators have found that the trivium has helped them to define and deliver their ideas about the education they want for their students, helping them to become engaged, lifelong learners in the process. There is no one 'right' way to 'do' the trivium: it is a tradition that can be adapted. It is the art of education and engages teachers in the art of being educators. Just as each great artist learns from a tradition and refashions it, adds to it, disrupts it, so do the teachers who have contributed to this book. On their canvas, in their school, each contributor is creating and re-creating trivium education in their own way. Discover the potential of the trivium and be inspired to do the same in your own classroom. Suitable for teachers and leaders in any educational setting.

This volume represents the proceedings of the Second International Conference on Innovation through Knowledge Transfer, InnovationKT’2010, organised jointly by KES International and the Institute of Knowledge Transfer, and taking place in Coventry, UK on 7&8 December 2010. Featuring world-class invited speakers and contributions from a range of backgrounds and countries, the conference provided an excellent opportunity to disseminate, share and discuss the impact of university-business interaction through knowledge transfer in all its forms. There were two main motivations in initiating the Innovation through Knowledge Transfer series. The first aim was to provide the chance for publication on a subject where few opportunities exist already. The second motivation was to foster the development of a community from the diverse range of individuals practicing knowledge transfer. It is becoming clear that the delegates of the conference are drawn from a diverse community of practice. InnovationKT’2010 has succeeded in bringing together contributions from both the academic and practitioner sections of the knowledge transfer community. The programme contained seven invited keynote talks, 40 oral presentations grouped into

eight sessions, and one interactive workshop. The proceedings contain 29 chapters drawn from this material. There were 91 registered delegates drawn from 10 countries of the world. The field of knowledge transfer is still immature, but these proceedings demonstrate that InnovationKT conference is making a significant contribution to its academic development.

provides. The first edition was frequently the top-selling game design book on Amazon, with more than 70% of the reviews being 5 stars. In a testament to the iterative process of design, this new edition includes hundreds of improvements throughout the text, all designed to make the book easier to understand and even more useful. This book was written with Unity 2017; the book.prototools.net website will cover changes for later versions of the software. Award-winning game designer and professor Jeremy Gibson Bond has spent more than a decade teaching game design and building great games. In that time, his most successful students have been those who combine knowledge of three critical disciplines: game design theory, rapid iterative prototyping, and practical programming. In this book, Bond distills the most important aspects of all three disciplines into one place. Part I: Game Design and Paper Prototyping • The Layered Tetrad framework: a synthesis of 50 years of game design theory • Proven practices for brainstorming and refining game designs through the iterative process of design • Methods and tools to manage game projects and small teams • Processes to make playtesting and feedback easier Part II: Digital Prototyping with Unity and C# • Chapters that guide you through learning C# the right way • Instruction that takes you from no prior programming knowledge through object-oriented programming • Deep exploration of Unity, today's most popular game engine on both macOS and Windows • Methods for understanding and debugging code issues you encounter Part III: Game

Prototype Examples and Tutorials • In-depth tutorials for seven different game prototypes, including a simple action game, a space shooter, a solitaire card game, a word game, and a top-down adventure • Instructions to compile these games for PC, web, or any of the dozens of other release platforms supported by Unity • Improved structure and layout that makes the steps of each tutorial easier to follow • A completely new Dungeon Delver prototype not present in the first edition

On April 14, 1994, two U.S. Air Force F-15 fighters accidentally shot down two U.S. Army Black Hawk Helicopters over Northern Iraq, killing all twenty-six peacekeepers onboard. In response to this disaster the complete array of military and civilian investigative and judicial procedures ran their course. After almost two years of investigation with virtually unlimited resources, no culprit emerged, no bad guy showed himself, no smoking gun was found. This book attempts to make sense of this tragedy--a tragedy that on its surface makes no sense at all. With almost twenty years in uniform and a Ph.D. in organizational behavior, Lieutenant Colonel Snook writes from a unique perspective. A victim of friendly fire himself, he develops individual, group, organizational, and cross-level accounts of the accident and applies a rigorous analysis based on behavioral science theory to account for critical links in the causal chain of events. By explaining separate pieces of the puzzle, and analyzing each at a different level, the author removes much of the mystery surrounding the shutdown. Based on a grounded theory analysis, Snook offers a dynamic, cross-level mechanism he calls "practical drift"--the slow, steady uncoupling of practice from written procedure--to complete his explanation. His conclusion is disturbing.

---

This accident happened because, or perhaps in spite of everyone behaving just the way we would expect them to behave, just the way theory would predict. The shutdown was a normal accident in a highly reliable organization.

Are the courts our friend or our foe? This book has three parts: Part I considers the case for judicial independence Part II looks at the question 'Is judicial independence under threat?' Part III reflects on whether judicial independence be defended and protected. Prompted by the constitutional crisis following the referendum of 2016, the Foundation for Law Justice and Society convened the second Putney Debates. Now convened on an

annual basis, they provide a forum each year for the discussion of matters of constitutional importance. The original Putney Debates were held in St Mary's Church, Putney in 1647. The Civil War had been won, the King was held prisoner, the New Model Army was in control. In late October of that year, the weekly meeting of the High Council of the New Model Army, under the chairmanship of Oliver Cromwell, together with several civilians, turned into a debate about the constitution. This is perhaps the only occasion in modern history that a constitutional convention has been held on the English constitution.
