Elemental cost analysis is perhaps the best known product based cost model and provides the data upon which elemental cost planning is based. The technique has been used by quantity surveyors to base their predictions during the design stage since the 1950s.

Introduction to Elemental Cost Analysis The purpose of cost analysis is to provide data that allows comparisons to be made between the costs of achieving various building functions in a project with those of achieving equivalent functions in other projects. It is the analysis of the cost of a building in terms of its elements.

Surveyors will have
used a spreadsheet
to prepare an

elemental analysis from a bill of quantities or priced schedule. BCIS has produced a simple Excel template to do just this but with the addition of a button which will save the analysis as an XML file which can then be used in a variety of other applications.

Elemental Method of Estimating - Building Cost Estimating ...

Elemental Cost Planning relies upon the adoption of a Standard Form of Cost Analysis for buildings which allows costs to be compared on a common format and forms the

basis of the benchmarking analysis central to the concept of Elemental Cost Plans.

The cost analysis is prepared by analyzing the information of a undertaking which has been planned or constructed in which the measures of measures have been priced. Therefore, the cost analysis is prepared based on the informations received from the successful stamp and is non based on the 'actual ' amount of the undertaking.
