The zero matrix of any size is always in row–echelon form.

DEFINITION 1.2.2

(Reduced row–echelon form) A matrix is in reduced row–echelon form if

1. it is in row–echelon form,
2. the leading (leftmost non–zero) entry in each non–zero row is 1,
3. all other elements of the column in which the leading entry 1 occurs are zeros.
