Many teachers report that student disengagement is one of the biggest challenges they encounter in the classroom, and research shows that there is a steady decline in students' engagement that begins as early as kindergarten and persists through the transitions to middle and high school. Young children are naturally curious and want to learn and explore, but unfortunately this all too often gives way to a lack of participation and effort, acting out and disrupting class, disaffection and withdrawal, and failure to deeply invest in academic content. Jennifer Fredricks's book goes beyond the idea that classroom management techniques and on-task behaviour ensure student engagement, to consider the emotional and cognitive dimensions that are critical for deeper learning and student achievement. Fredricks presents compelling strategies based on the research to demonstrate how instructional tasks, teacher-student relations, and peer dynamics all play a pivotal role in cultivating lasting student engagement.

They're not the students strolling across the bucolic liberal arts campuses where their grandfathers played football. They are first-generation college students—children of immigrants and blue-collar workers—who know that their hopes for success hinge on a degree. But college is expensive, unfamiliar, and intimidating. Inexperienced students expect tough classes and demanding, remote faculty. They may not know what an assignment means, what a score indicates, or that a single grade is not a definitive measure of ability. And they certainly don't feel entitled to be there. They do not presume success, and if they have a problem, they don't expect to receive help or even a second chance. Rebecca D. Cox draws on five years of interviews and observations at community colleges. She shows how students and their instructors misunderstand and ultimately fail one another, despite good intentions. Most memorably, she describes how easily students can feel defeated—by their real-world responsibilities and by the demands of college—and come to conclude that they just don't belong there after all. Eye-opening even for experienced faculty and administrators, *The College Fear Factor* reveals how the traditional college culture can actually pose obstacles to students' success, and suggests strategies for effectively explaining academic expectations.

A New York Times Notable Book for 2011 A Washington Post Notable Nonfiction Book for 2011 The first authoritative biography of Kurt Vonnegut Jr., a writer who changed the conversation of American literature. In 2006, Charles Shields reached out to Kurt Vonnegut in a letter, asking for his endorsement for a planned biography. The first response was no ("A most respectful demurring by me for the excellent writer Charles J. Shields, who offered to be my biographer"). Unwilling to take no for an answer, propelled by a passion for his subject, and already deep into his research, Shields wrote again and this time, to his delight, the answer came back: "O.K." For the next year—a year that ended up being Vonnegut's last—Shields had access to Vonnegut and his letters. And *So It Goes* is the culmination of five years of research and writing—the first-ever biography of the life of Kurt Vonnegut. Vonnegut resonates with readers of all generations from the baby boomers who grew up with him to high-school and college students who are discovering his work for the first time. Vonnegut's concise collection of personal essays, *Man Without a Country*, published in 2006, spent fifteen weeks on the New York Times bestseller list and has sold more than 300,000 copies to date. The twenty-first century has seen interest in and scholarship about Vonnegut's works grow even stronger, and this

is the first book to examine in full the life of one of the most influential iconoclasts of his time.

A "comprehensive and fascinating study" of how wind has shaped the world as we know it, affecting all aspects of human and natural life—from geography to political history, plant life to psychology, and biology to philosophy (The Observer) Wind is everywhere and nowhere. Wind is the circulatory system of the earth, and its nervous system, too. Energy and information flow through it. It brings warmth and water, enriches and strips away the soil, aerates the globe. Wind shapes the lives of animals, humans among them. Trade follows the path of the wind, as empire also does. Wind made the difference in wars between the Greeks and Persians, the Mongols and the Japanese. Wind helped to destroy the Spanish Armada. And wind is no less determining of our inner lives: the föhn, mistral, sirocco, Santa Ana, and other "ill winds" of the world are correlated with disease, suicide, and even murder. *Heaven's Breath* is an encyclopedic and enchanting book that opens dazzling new perspectives on history, nature, and humanity.
