Theodosia Browning may
always be a bridesmaid,
never a bride, but this
groom is never going to
make it to the altar...
Theodosia Browning's
dear friend Delaine Dish
has asked her to be a

bridesmaid for her wedding. But when the big day arrives, everything seems to be going wrong. First, a massive storm is brewing over Charleston. A bad omen? Second, Delaine's sister is late for the ceremony. And finally, the groom not only has cold feet—his whole body is cold. A murderer has crashed the wedding. As Theodosia comforts a devastated Delaine, she needs to sort out the suspects on the groom's side from the suspects on the bride's side. One thing soon becomes apparent—revenge won't be the only dish served cold at this wedding. And if Theodosia doesn't watch her step, a cold-blooded killer may have a rude reception in store for her...

A History of the Roman People Johannes Wild
In 1543, Polish astronomer Nicolaus Copernicus challenged the view that the sun revolved around the earth, arguing instead that the earth revolved around the sun. His paper led to a revolution in thinking. In Lester Brown's brilliant and invigorating account of the industrial economy, he shows how a rethink of its fossil fuel-based, throwaway ethos is necessary to ensure that it works with, not against, the natural environment. The issue now is whether the environment is part of the economy or the economy is part of the environment. Brown argues the latter, pointing out that treating the environment as part of the economy has produced an economy that is destroying its natural

support systems. One of the foremost experts on the new economic opportunities, Brown shows the vast economic potential and environmental gains that exist from eliminating the waste and destruction of current consumption. He describes how the global economy can be restructured to make it compatible with the earth's ecosystem so that economic progress can continue, with high standards of living and secure employment for all, while conserving resources and restoring the environment. In the new economy, wind farms replace coal mines, hydrogen-powered fuel cells replace internal combustion engines, and cities are designed for people, not cars. Eco-Economy is a map of how to get from here to there. It is an essential guide to the economy of the 21st century and will be compelling reading for business readers and environmentalists alike looking for ways to build a better future.

Quick Calculus 2nd Edition A Self-Teaching Guide

Calculus is essential for understanding subjects ranging from physics and chemistry to economics and ecology.

Nevertheless, countless students and others who need quantitative skills limit their futures by avoiding this

subject like the plague. Maybe that's why the first edition of this self-teaching guide sold over 250,000 copies. Quick Calculus, Second Edition continues to teach the elementary techniques of differential and integral calculus quickly and painlessly. Your "calculus anxiety" will rapidly disappear as you work at your own pace on a series of carefully selected work problems. Each correct answer to a work problem leads to new material, while an incorrect response is

followed by additional explanations and reviews. This updated edition incorporates the use of calculators and features more applications and examples. ".makes it possible for a person to delve into the mystery of calculus without being mystified."

Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser ' s philosophy. The growing importance of Althusser ' s philosophy in contemporary debates on the left has

- for practical and political, as well as theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to *Althusser and Law* argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life.

 In Laura Childs's New York Times bestselling mystery series, Suzanne, Petra, and Toni—co-owners of the Cackleberry Club Café—are equally good at serving

up breakfast and serving up justice. This time they turn up the heat on a deadly firebug... As Suzanne is getting her hair colored at Root 66, she's stunned to witness the County Services office next door suddenly go up in flames. Concerned neighbors throng the streets, and the fire department does their best. Unfortunately, their best isn't enough to save longtime civil service worker—and friend to the Cackleberry Club—Hannah Venable. Soon enough, it's discovered that an accelerant was used to fan the flames. Someone set the fire on purpose—was Hannah the intended victim? Suzanne, Petra, and Toni vow to smoke out the culprit. Unfortunately, the list of suspects is as varied as the Cackleberry Club's menu. When Suzanne finds a possible connection between the fire and the nearby Prairie Star Casino, she comes to realize that the arsonist wanted something very big and bad kept secret. And if the ladies aren't careful, they may be the ones gambling with their lives...

All About Machine Tools David J. Gingery Publishing, LLC Charcoal Foundry, the first book in the "Metal Working Shop From Scrap Series", gives you plans for building a metal melting furnace and instructions on basic pattern making and molding. All the information needed to set up a foundry in your work shop can be found in this book. Simply stated, if you

can build a sand castle or make a mud pie, you can make a sand mold to produce castings for your metal shop projects. The main ingredient in these projects is scrap aluminum and pot metal. The only tools you need to get started are ordinary home shop hand tools, many of which are probably already in your possession. Much of the remainder is found as salvage or cast-off and little expense need be involved. The charcoal foundry is simple to build and operate and the initial cost is so low that it can be in the reach of nearly anyone. And the fundamentals of pattern-making and molding are easily understood and mastered. Once you have built the charcoal foundry and the metal lathe in book 2, there is little beyond your reach by way of shop equipment. Build as large or small as you wish and you are your own parts supply company. If you already have some machine shop equipment, you will find that adding a foundry to your shop greatly expands your capacity. Being able to produce your own castings for accessories and

equipment is a great advantage. Design your own, make a copy or follow a plan. It's easy when you're in control and can produce your own castings.

The Sheet Metal Brake is also known as book 7 from the best selling 7 book series, 'Build Your Own Metal Working Shop From Scrap'. I almost left this one out of the series and I would have if it were not for my friends who tell me they are always wanting to bend some sheet metal for a project. This one uses no castings. It's a welding project using standard structural steel and common hardware items to build a compact portable bending brake. Its a 15" brake as detailed but you can scale up or down in size within limits. Definitely not a heavy duty brake but you can make neat bends in 26 gauge metal to form duct, boxes, drawers,

belt guards and dozens of items for your shop projects Some have beefed up the leaves and pivots so that metal as heavy as 20 gauge can be bent sharply.

This book is intended to fill a gap between the theoretical studies and the practical experience of the processor in the extrusion of thermoplastic polymers. The former have provided a basis for numerical design of extruders and their components, but generally give scant attention to the practical performance, especially to the conflict between production rate and product quality. In practice extruders are frequently purchased to perform a range of duties; even so, the operator may have to use a machine designed for

another purpose and not necessarily suitable for the polymer, process or product in hand. The operator's experience enables him to make good product in unpromising circumstances, but a large number of variables and interactions often give apparently contradictory results. The hope is that this book will provide a logical background, based on both theory and experience, which will help the industrial processor to obtain the best performance from his equipment, to recognize its limitations, and to face new problems with confidence. Mathematics is used only to the extent that it clarifies effects which cannot easily be expressed in words; if it is passed over, at least a qualitative understanding should remain. The

approximate theory will not satisfy the purist, but this seems to the authors less important than a clear representation of the physical mechanisms on which so much of the polymer processing industry depends. M. J. STEVENS J. A.
