The EMD 645 is a family of
diesel engines that was
designed and manufactured
by the Electro-Motive
Division of General Motors.
While the 645 series was
intended primarily for

locomotive, marine and
stationary engine use, one
16-cylinder version powered
the 33-19 "Titan" prototype
haul truck designed by GM's
Terex division. The 645
series was an evolution of the
earlier 567 series and a
precursor to the later 710
series. First introduced in
1965, the EMD 645 series

EMD "645" Engine. The
Electro-Motive Division's
model 645 prime mover
further advanced the builder's
dominance in the locomotive
marketplace. The diesel engine
was born from a need to offer
increased horsepower since the
reliable model 567, which had
been in production since 1938
and finally reached the limit of
its capabilities. The new prime
mover was first tested in the
early 1960s and with this
success entered production a
few years later.

These engines were introduced in the 1930s and power a large number of the diesel locomotives found in the United States. There have been three successive series in the EMD line: the 567 series, the 645 series, and the 710 series. The numbers refer to the number of cubic inches per cylinder, with a typical engine having 16 cylinders (for a total displacement on the order of 10,000 cubic inches!).
