EMD 645 - Wikipedia

The 2,250 hp came from  
two 12 cylinder model 567B  
engines, each driving a  
generator to power the two  
traction motors on one truck.

The E8 was the ninth model  
in the line of passenger  
diesels of similar design  
known as EMD E-units.

Starting in September 1953,  
a total of 21 E8As were built  
which used either the 567BC  
or 567C engines.

The EMD 645 is a family

of diesel engines that was  
designed and  
manufactured by the  
Electro-Motive Division of  
General Motors. While the  
645 series was intended  
primarily for locomotive,  
marine and stationary  
engine use, one  
16-cylinder version  
powered the 33-19 "Titan"  
prototype haul truck  
designed by GM's Terex  
division. The 645 series  
was an evolution of the  
earlier 567 series and a  
precursor to the later 710  
series. First introduced in

1965, the EMD 645 series remained in production on a by-EMD 645 / 710 engine parts for sale - marine-engines.in EMD "645" Engine. The Electro-Motive Division's model 645 prime mover further advanced the builder's dominance in the locomotive marketplace. The diesel engine was born from a need to offer increased horsepower since the reliable model 567, which had been in production since 1938 and finally

reached the limit of its capabilities. The new prime mover was first tested in the early 1960s and with this success entered production a few years later. 1050kW Generator Set w/ EMD 12-645-E8 Engine - Diesel ...
