Applying the principles of human-centered design to real-world health care challenges, from drug packaging to early detection of breast cancer. This book makes a case for applying the principles of design thinking to real-world health care challenges. As health care systems around the globe struggle to expand access, improve outcomes, and control costs, Health Design Thinking offers a human-centered approach for designing health care products and services, with examples and case studies that range from drug packaging and exam rooms to internet-connected devices for early detection of breast cancer. Written by leaders in the field—Bon Ku, a physician and

founder of the innovative Health Design Lab at Sidney Kimmel Medical College, and Ellen Lupton, an award-winning graphic designer and curator at Cooper Hewitt Smithsonian Design Museum—the book outlines the fundamentals of design thinking and highlights important products, prototypes, and research in health design. Health design thinking uses play and experimentation rather than a rigid methodology. It draws on interviews, observations, diagrams, storytelling, physical models, and role playing; design teams focus not on technology but on problems faced by patients and clinicians. The book's diverse case studies show health design thinking in action. These include

the development of PillPack, which frames prescription drug delivery in terms of user experience design; a credit card-size device that allows patients to generate their own electrocardiograms; and improved emergency room signage. Drawings, photographs, storyboards, and other visualizations accompany the case studies. Think back to a time when paramedics didn't exist. When "drivers" simply brought injured patients to the hospital. When the EMS industry was in its infancy. A time before Nancy Caroline. A simple, straightforward, and foolproof proposal for universal health insurance from a noted economist. The shocking statistic is that forty-seven million Americans have no health insurance. When uninsured Americans go to the emergency room for treatment, however, they do receive care, and a bill. Many hospitals now require uninsured patients to put their treatment on a credit card which can saddle a low-income

household with unpayably high balances that can lead to personal bankruptcy. Why don't these people just buy health insurance? Because the cost of coverage that doesn't come through an employer is more than many low- and middle-income households make in a year. Meanwhile, rising healthcare costs for employees are driving many businesses under. As for government-supplied health care, ever higher costs and added benefits (for example, Part D, Medicare's new prescription drug coverage) make both Medicare and Medicaid impossible to sustain fiscally; benefits grow faster than the national per-capita income. It's obvious the system is broken.

What can we do? In *The Healthcare Fix*, economist Laurence Kotlikoff proposes a simple, straightforward approach to the problem that would create one system that works for everyone and secure America's fiscal and economic future. Kotlikoff's proposed Medical Security System is not the "socialized medicine" so feared by Republicans and libertarians; it's a plan for universal health insurance. Because everyone would be insured, it's also a plan for universal healthcare. Participants—including all who are currently uninsured, all Medicaid and Medicare recipients, and all with private or employer-supplied insurance—would receive annual

vouchers for health insurance, the amount of which would be based on their current medical condition. Insurance companies would willingly accept people with health problems because their vouchers would be higher. And the government could control costs by establishing the values of the vouchers so that benefit growth no longer outstrips growth of the nation's per capita income. It's a "single-payer" plan, but a single payer for insurance. The American healthcare industry would remain competitive, innovative, strong, and private. Kotlikoff's plan is strong medicine for America's healthcare crisis, but brilliant in its simplicity. Its provisions can fit on a postcard

and Kotlikoff provides one, ready to be copied and mailed to your representative in Congress.
